

At-A-Glance:

A Summary of TB in Fresno County (2023)*

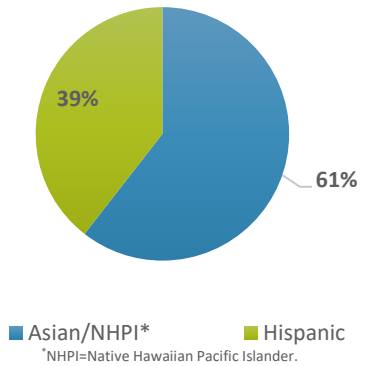

Figure 1. Fresno County TB Incident Cases by Race/Ethnicity (2023). Most new TB cases self-identify as Hispanic. Categories representing <5% of total new cases are not represented.

Figure 2. Fresno County TB Incident Cases by Age (2023). TB cases in those less than 55 years of age represent less than 50% of all new TB cases occurring in Fresno County.

Figure 3. Fresno County's TB Trends by Year. This figure shows the number of new TB cases and incidence by year. Fresno County had 39 active TB cases in the year 2023, up from 31 in 2022.

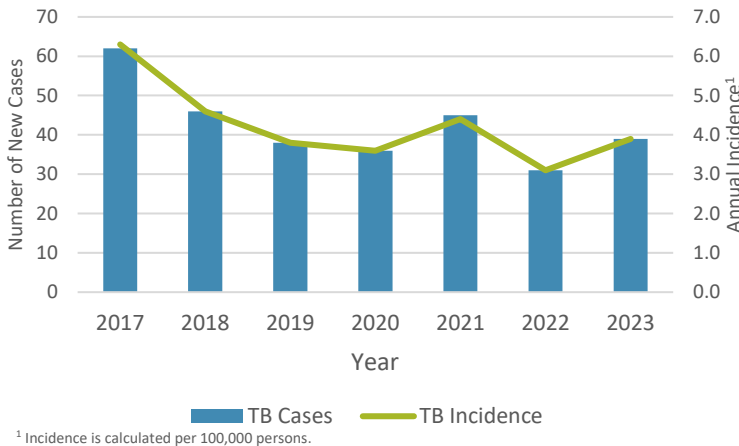

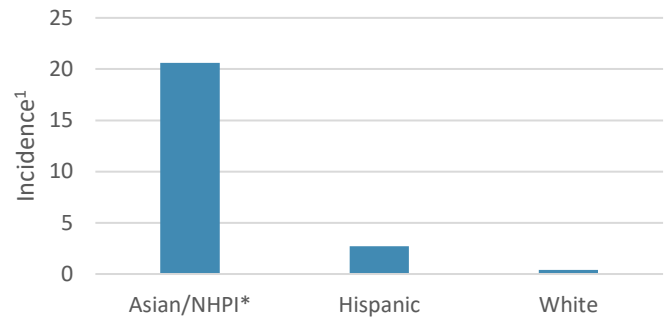

Figure 4. Fresno County TB Incidence by Race & Ethnicity² (2023). Asians/Pacific Islanders had the highest incidence of TB in 2023 followed by Hispanics, and Whites.

¹Incidence is calculated per 100,000 persons. *NHPI=Native Hawaiian Pacific Islander.
²Hispanic may include people from any race (i.e., American Indian/Alaskan Native, Asian/Pacific Islander, Black, White, and Multi-Racial). All other race groups are non-Hispanic.

Figure 5. Percent of Fresno County TB Cases that are Foreign vs. US Born. This figure shows the percentage of TB cases that are foreign vs. US born from 2017–2023. Most TB cases from 2017–2023 occurred in people who are foreign born.

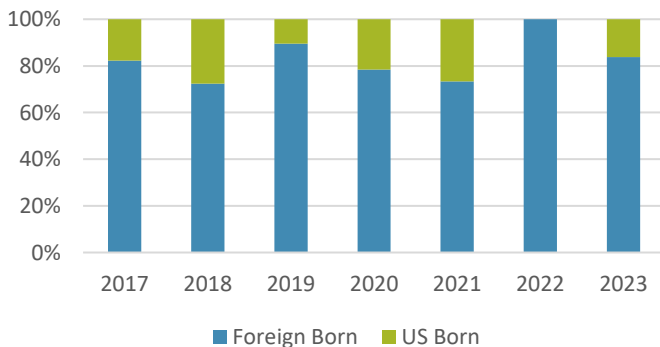

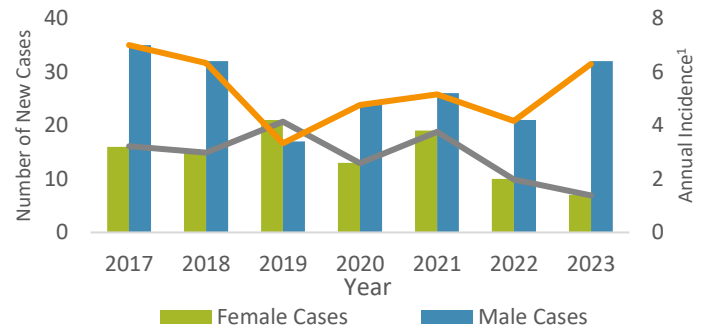

Figure 6. Fresno County's Incident Cases of TB by Gender and Year. This figure shows the number of new cases, by year and gender, as well as the corresponding incidence. Excluding the year 2019, from 2017 to 2023, males had both a higher incidence of TB and a higher number of TB cases when compared to females.

¹Incidence is calculated per 100,000 persons of that gender.
