Appendix E2

Project Fuel Use Calculation

Luna Valley Solar Project Fuel Use Calculations

1/11/2021

CO₂ emissions from AQ Calculations:

Conversion	1 MT =	1000 kg
------------	--------	---------

Construction Diesel Sources	
	CO ₂ Emissions
Off road equipment	2544.9427 MT
Haul/Vendor trucks	498.89 MT
TOTAL Diesel Sources =	3043.83 MT
Convert to kilograms	3.04E+06 kg

Diesel fuel combustion^a = 10.21 kg CO₂/gallon

Diesel Combustion Rate = 298122.21 gallons (over the 16 month construction period)

Construction Gasoline Sources	
	CO ₂ Emissions
Construction workers	1380.2946 MT
Convert to kilograms	1.38E+06 kg

Gasoline fuel combustion^a = 8.78 kg CO₂/gallon

Gasoline combustion rate = 157208.95 gallons (over the 16 month construction period)

Operation Diesel Sources	
	CO ₂ Emissions
Emergency generator if diesel	1.2566 MT
Convert to kilograms	1.26E+03 kg

Diesel fuel combustion^a = 10.21 kg CO₂/gallon

Diesel combustion rate = 123.08 gallons Per year during operation if diesel generator is used

Operation Propane Sources	
	CO ₂ Emissions
Emergency generator if propane	1.2566 MT
Convert to kilograms	1.26E+03 kg

Propane fuel combustion^a = 5.72 kg CO₂/gallon

Propane combustion rate = 219.69 gallons Per year during operation if propane generator is used

Operation Gasoline Sources	
	CO ₂ Emissions
Operational Vehicles	27.072 MT
Convert to kilograms	2.71E+04 kg

Gasoline fuel combustion^a = 8.78 kg CO₂/gallon

Gasoline combustion rate = 3083.37 gallons Per year during operation

Notes: ^a Emissions factors per The Climate Registry 2020 Default Emission Factors (Table 2.1 - US Default CO₂ Emission Factors for Transport Fuels)

**Luna Valley Solar Project
Fresno County, Annual**

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Industrial	1,300.00	User Defined Unit	1,300.00	0.00	0

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	45
Climate Zone	3			Operational Year	2023
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MW/hr)	641.35	CH4 Intensity (lb/MW/hr)	0.029	N2O Intensity (lb/MW/hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project is located in Fresno County.
 Land Use - Project would be on 1300 acres of privately owned agricultural land Off-road Equipment - Construction equipment data provided by applicant.
 Off-road Equipment - Construction equipment data provided by applicant. Off-road Equipment - Construction equipment data provided by applicant. Trips and VMT - Peak per phase; provided by applicant.
 Grading - Acres of grading.
 Architectural Coating - O&M Building 100 x 50 ft, Control Building 40 x 40 ft Vehicle Trips - 4 full-time personnel.
 Area Coating - O&M Building 100 x 50 ft, Control Building 40 x 40 ft
 Energy Use - Energy rates based on Unrefrigerated Warehouse, Lighting rates based on Parking Lot.
 Water And Wastewater - Estimated (conservative) water use for building facilities and occasional solar panel cleaning. Solid Waste - Solid waste rates based on Unrefrigerated Warehouse.
 Construction Off-road Equipment Mitigation - BMPs for fugitive dust control Tier 4 Final Engines for equipment >100 hp
 Mobile Commute Mitigation -
 Stationary Sources - Emergency Generators and Fire Pumps - 1 diesel emergency generator 49 kW or less located at substation; assume no more than 50 hours/year for maintenance, testing, and emergency response.

1.0 INTRODUCTION

Tetra Tech, Inc. (Tetra Tech) prepared this biological resources evaluation report for the proposed Luna Valley Solar Project (Project). Luna Valley Solar I, LLC (Project proponent) proposes to develop approximately 1,300 acres of land (Project site) located in the unincorporated community of Levis, Fresno County, California, for the development of a solar energy facility.

A literature review and biological field surveys of the Project site and a 150-meter buffer zone were performed. Together, the Project site and the 150-meter buffer zone are the biological study area (BSA). Biologists visited the BSA in 2020 and 2021 and conducted the following surveys:

- General site assessment and vegetation community mapping.
- General plant surveys.
- General wildlife surveys.
- Protocol burrowing owl (BUOW) habitat assessment and burrow survey.
- Protocol breeding season and winter season BUOW surveys.
- Raptor habitat assessment.
- San Joaquin kit fox habitat assessment.
- Jurisdictional wetlands/waters of the United States (U.S.).

The purpose of this biological resources evaluation report is to:

- Summarize existing conditions.
- Describe biological field survey methods and results.
- Assess the potential presence of special-status biological resources.

Results of the BUOW habitat assessment and burrow survey and jurisdictional delineation are provided in separate reports.

1.1 PROJECT SITE LOCATION, ECOREGION, AND SETTING

1.1.1 Project Site Location

The Project site is located on approximately 1,300 acres of privately-owned, undeveloped, agricultural land owned by the Westlands Water District. The property is in the rural, unincorporated community of Levis, Fresno County, California (Figure 1). Levis is in the western section of Fresno County and within the westside valley area geographic region of the county. Levis is also located in Central California, within the Great Valley, also called the Central Valley (Figure 2). From the Project site, the nearest community is Tranquillity, a Census-Designated Place, approximately 9 miles to the northeast. The cities of Mendota and San Joaquin are approximately 10 miles north and east of Project area, respectively. The City of Fresno, the largest city in the county, is located approximately 35 miles northeast of the Project site. The Project property is made up of 16 contiguous parcels with the following Assessor's Parcel Numbers: 028-060-34, 028-060-69, 028-060-70, 028-060-71, 028-060-72, 028-101-15, 028-101-17, 028-101-19, 028-101-29, 028-101-58, 028-101-59, 028-101-65, 028-101-69, 028-101-72, 028-101-74, and 028-101-77.

The Project site is in the United States Geological Survey (USGS) Levis 7.5-Minute Topographic Quadrangle Map, within Township 15S, Range 14E, Sections 23, 24, 25, and 26, Mt. Diablo Principle Meridian (Figure 3).

A paved road, W. Manning Avenue, cuts through the approximate middle of the Project site from east to west; State Route 33 (S. Derrick Avenue) borders the eastern portion of the Project site; S. Ohio Avenue, an unpaved road, cuts through the general middle of the Project site from north to south; and W. Dinuba Avenue, an unpaved road, borders the southernmost section of the Project site (Figure 4).

There are no access limitations to the Project site and one can reach the site from W. Manning Avenue, State Route 33 (S. Derrick Avenue), S. Ohio Avenue, W. Dinuba Avenue, and interior unpaved access roads. Most roadways in the Project vicinity are unimproved or paved without curb or sidewalk improvements. Interstate 5, located south and west of the Project site, is the only major transportation route near the site. W. Manning Avenue and State Route 33 can both be accessed by Interstate 5. The California Aqueduct generally parallels Interstate 5 and is also located south and west of the site. Both W. Manning Avenue and State Route 33 have bridges that cross over the aqueduct.

1.1.2 Ecoregion

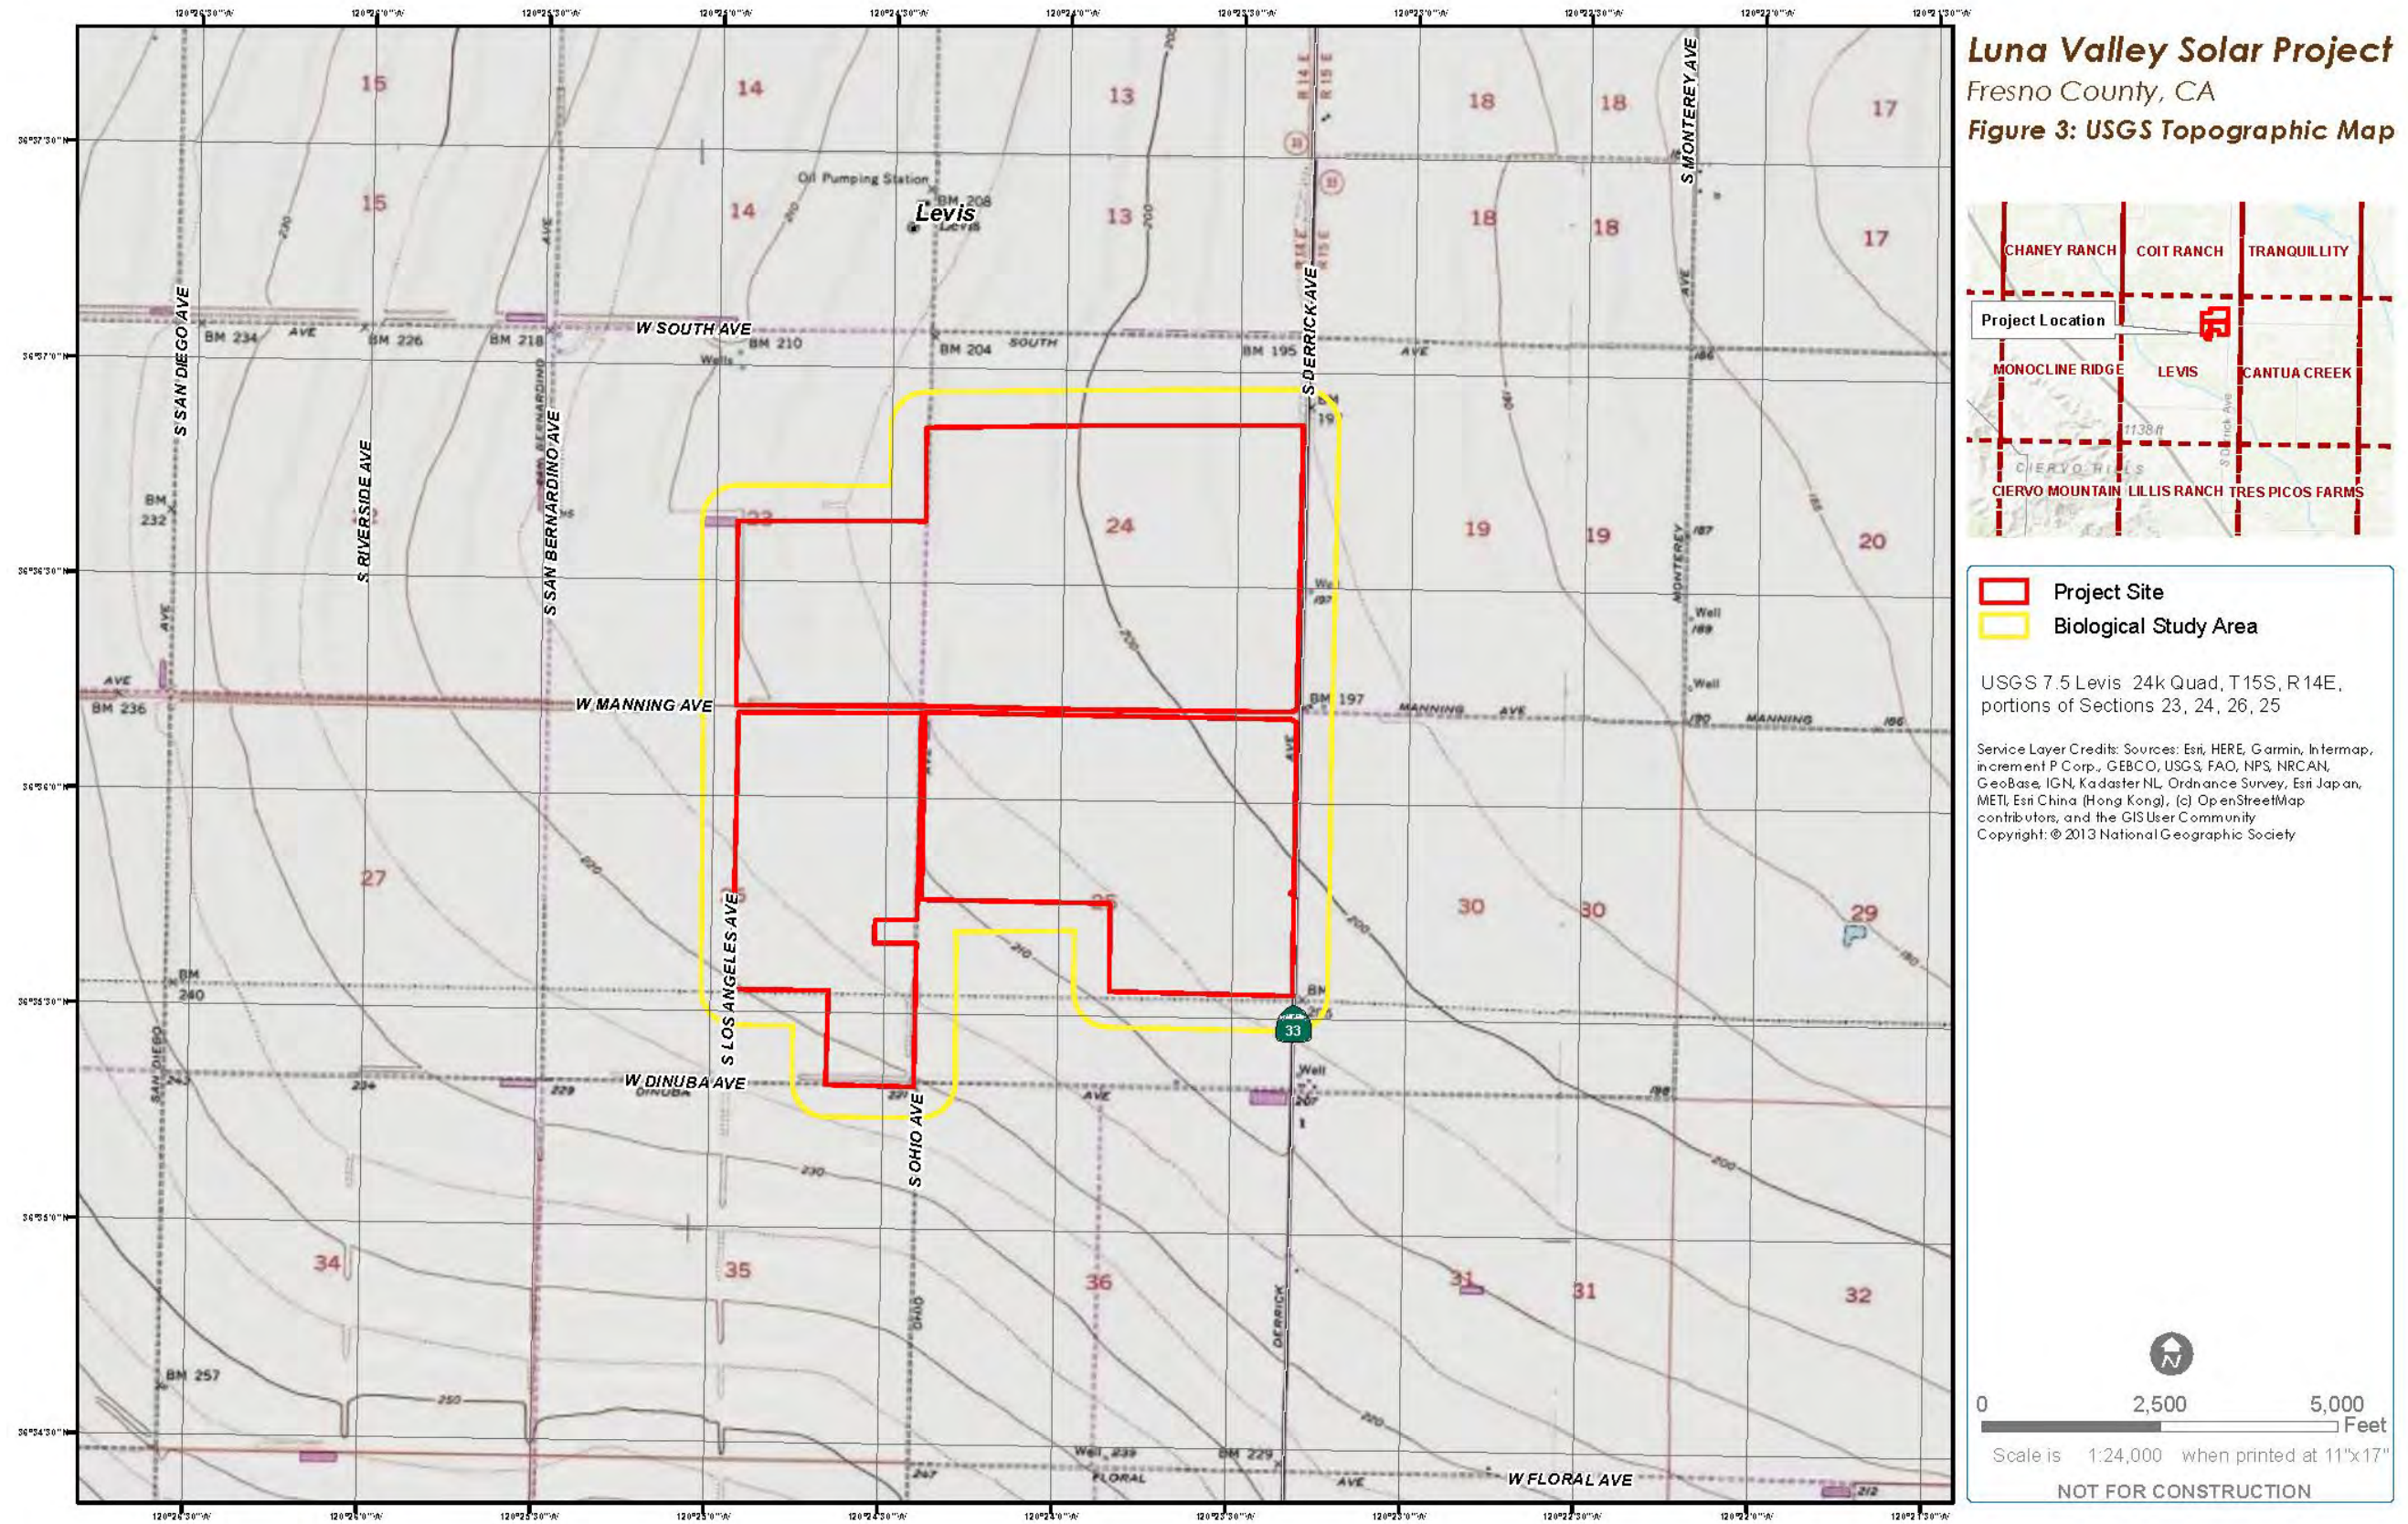

California can be divided up into 11 Geomorphic Provinces. The Project site is located within the Great Valley Geomorphic Province, which is a broad, flat, alluvial plain about 50 miles wide and 400 miles long in the central part of California between the Sierra Nevada in the east and the Coast Ranges in the west. The Central Valley is composed of two valleys: 1) the northern and smaller valley, known as the Sacramento Valley, which is drained by the Sacramento River; and 2) the southern and larger valley, known as the San Joaquin Valley, which is drained by the San Joaquin River (California Department of Conservation, California Geological Survey 2002). The Project site is located within the San Joaquin Valley subregion of the Great Valley (Jepson Flora Project [eds.] 2020).

Regionally, the inner Central Coast Ranges are located approximately 12 miles west of the Project site. Within those ranges, the Tumey Hills is located west; the Ciervo Hills is located southwest; and the Panoche Hills are located northwest of the Project site.

The California Department of Fish and Wildlife (CDFW) Mendota Wildlife Area is located approximately 4.5 miles northeast of the Project site. This Wildlife Area is approximately 11,800 acres consisting of flatlands and floodplain (CDFW 2020a). Major representative plant communities and habitat types are seasonally flooded freshwater emergent wetland, valley foothill riparian and, to a lesser extent, alkali sink scrub (CDFW 2020a). A variety of migratory waterfowl, pheasants, and several special-status plants and animals occur at this site (CDFW 2020a).

Next to the Mendota Wildlife Area is CDFW's Alkali Sink Ecological Reserve which is located approximately 9 miles northeast of the Project site. The 930-acre Ecological Reserve includes alkali sink scrub and annual grassland habitats (CDFW 2020a). Migratory birds, particularly sandhill cranes, make seasonal use of the ground for foraging and resting (CDFW 2020a). Wintering waterfowl utilize the flooded vernal pools, and some limited waterfowl nesting may take place on the annual grasslands (CDFW 2020a).

Next to the Alkali Sink Ecological Reserve is CDFW's Kerman Ecological Reserve which is located approximately 13 miles northeast of the Project site. The principal habitat type of this 1,800-acre Ecological Reserve is annual grassland, though northern claypan vernal pool and alkali desert scrub habitats also occur on this site (CDFW 2020a). Animal species known or suspected to occur at the reserve include waterfowl, shorebirds, raptors, lizards, snakes, hare, coyote, badger, and ground squirrel (CDFW 2020a).

2.0 PROJECT DESCRIPTION

The Project consists of constructing and operating a photovoltaic solar electricity generating facility and energy storage system and associated infrastructure that would produce up to 200 megawatts of alternating current energy at the point of electrical grid interconnection on approximately 1,300 acres of privately-owned agricultural land. The Project would include the construction of:

- Solar arrays.
- Electrical substation and electrical interconnection facilities.
- Energy storage system.
- Operation and maintenance building.
- Septic system and leach field.
- Supervisory control and data acquisition system.
- Meteorological data system.
- Buried conduit for electrical wires.
- Overhead collector lines.
- On-site access roads and security fencing.

Construction is tentatively scheduled to begin in 2022 (start date is still to be determined) and last approximately 16 months. Project construction would occur between 6:00 a.m. and 9:00 p.m., Monday through Friday, in compliance with the County's Code. A variety of equipment is planned for use during the 16-month construction phase including: skid steers, water trucks, welder, pickup trucks, bulldozers, front end loaders, graders, roller compactors, trenchers, forklifts, pile drivers, backhoes, crane, and aerial lifts. The average number of on-site personnel is anticipated to be approximately 200, with a peak in both personnel and equipment use during month seven of construction. Construction will consist of site preparation, grading, preparing staging areas and on-site access routes, and assembling the trackers and constructing electrical interconnection facilities. Because the site is already mostly flat, grading would be minimal. The facility would begin operation in 2023.

3.0 LITERATURE REVIEW

This section describes the study methods (literature review) used for evaluating the biological resources within the BSA and Project vicinity. Biologists reviewed relevant literature, databases, Geographic Information System (GIS) data, and aerial imagery. This information was summarized in the *Biological Resources Study Work Plan* for the Luna Valley Solar Project and submitted to CDFW and U.S. Fish and Wildlife Service (USFWS) for review (Tetra Tech 2020).

3.1 TOPOGRAPHY

The USGS 7.5-Minute Topographic Map *Levis* Quadrangle, aerial imagery (Google Earth®), historic imagery (Google Earth® and Historic Aerials by Netronline [Netronline 2020]), and interactive maps were reviewed. Topography describes the physical features of an area of land. The topographic features looked at include natural landforms, aquatic features, developed lands, agricultural lands, undeveloped lands, and terrain.

The Project site has historically been used for dry-farmed (non-irrigated) agriculture (low-yield production of winter wheat, alfalfa, oats) and has been used for this purpose for the last 10 years. Agricultural land in the Project area has been documented to contain relatively high levels of selenium and a water table that does not provide enough drainage for commercially irrigated crops. During dry years with insufficient rainfall for crop production, Project parcels were fallow, or the land was grazed as rangeland grasses. Currently, some portions of the Project area lie fallow while most of the area is used for dryland farming to grow livestock fodder such as alfalfa.

Natural landforms are natural physical features on the surface of the land, such as mountains, hills, and canyons. Natural landforms are absent from the Project site. The Project site land is flat and is entirely developed for agriculture. The elevational range of the Project site is 185–215 feet above mean sea level.

3.2 SENSITIVE NATURAL COMMUNITIES

CDFW's California Natural Diversity Database (CNDDDB; CDFW 2020b) was used to identify sensitive natural communities that may exist within the USGS *Levis* Quadrangle and within the eight surrounding USGS Quadrangles: *Chaney Ranch*, *Coit Ranch*, *Tranquillity*, *Cantua Creek*, *Tres Picos Farms*, *Lillis Ranch*, *Ciervo Mtn.*, and *Monocline Ridge*. The CNDDDB search determined that three sensitive communities are known to occur within the search area but not within or adjacent to the Project site:

- Coastal and valley freshwater marsh.
- Monvero residual dunes.
- Valley sink scrub.

Since the site has been used for agriculture for the last 10 years and these sensitive communities have not been documented within over 8 miles from the site, it is very unlikely that they would occur at the site. In addition, these sensitive communities were not observed during the biological field survey.

3.3 SPECIAL-STATUS PLANT AND WILDLIFE SPECIES

Plant and wildlife species protected by federal agencies, state agencies, and local conservation agencies and organizations, such as the California Native Plant Society (CNPS), are collectively referred to as “special-status species” in this report. The methods described below were used to research and derive a comprehensive Project-specific list of special-status plants and wildlife that may be observed during the field surveys. The following databases were reviewed for potential plant and wildlife species that may occur within the Project site:

- CDFW's CNDDDB RareFind 5 online database (CDFW 2020b) was used to identify special-status plant and wildlife species that have previously been observed within the USGS *Levis* Quadrangle and within the eight surrounding USGS Quadrangles: *Chaney Ranch*, *Coit Ranch*, *Tranquillity*, *Cantua Creek*, *Tres Picos Farms*, *Lillis Ranch*, *Ciervo Mtn.*, and *Monocline Ridge* (Figure 5).
- The USFWS Information, Planning, and Conservation (IPaC) system (USFWS 2020a) was used to identify federal threatened and endangered plant and wildlife species, critical habitats, and other natural resources of concern that may exist within the Project site.
- CNPS' online *Inventory of Rare and Endangered Plants of California*, 8th Edition (CNPS 2020) was used to identify special-status plants that may exist within the USGS *Levis* Quadrangle and within the eight surrounding USGS Quadrangles: *Chaney Ranch*, *Coit Ranch*, *Tranquillity*, *Cantua Creek*, *Tres Picos Farms*, *Lillis Ranch*, *Ciervo Mtn.*, and *Monocline Ridge*.

The list of potential species that could occur in the Project area was refined based on the known land use and habitats in the Project site. The Project site is highly disturbed and consists almost entirely of active dry-farming agricultural areas under production for winter wheat. Therefore, species requiring strictly dune, marsh and swamp, wetland, scrub, aquatic, marine, chaparral, woodland and forest, vernal pools, and/or riparian habitats have been eliminated from potential occurrence at the site based on lack of habitat. In addition, because the site consists entirely of disturbed habitat, special-status plant species were not anticipated to occur.

Special-status species with the potential to occur on the Project site were provided in the *Biological Resources Study Work Plan* (Tetra Tech 2020). The potential to occur for each species has been reviewed and updated based on the results of the field surveys and is provided in the special-status species results section of this report.

3.4 CRITICAL HABITATS

The USFWS' Critical Habitat Portal (USFWS 2020b) was reviewed to identify federal threatened and endangered species designated final and proposed Critical Habitat within the Project site and Project vicinity. The literature review determined that the BSA is not located within designated or proposed Critical Habitat for listed plant or wildlife species. The nearest Critical Habitat is for the Fresno kangaroo rat (*Dipodomys nitratooides exilis*), which is approximately 10 miles northeast of the Project site.

3.5 WILDLIFE MOVEMENT

CDFW's Biogeographic and Information Observation System (BIOS) Habitat Connectivity Viewer (CDFW 2020c) was used to review the Essential Connectivity Map and to search for Natural Landscape Blocks (NLBs) and Essential Connectivity Areas (ECAs) within the Project site and Project vicinity. The California Essential Connectivity Map depicts large, relatively natural habitat blocks that support native biodiversity (NLBs) and areas essential for ecological connectivity between them (ECAs). The literature review determined that the BSA is not located within a CDFW designated ECA or an NLB.

An evaluation of potential wildlife movement within the BSA and Project vicinity was also conducted by examining aerial imagery and maps. Finally, the literature review also included maps and reports on wildlife home ranges and migration and dispersal patterns (California Department of Fish and Game 1988a, 1988b, 1988c). The literature review determined that the BSA does not contain or function as a wildlife movement corridor for the reasons listed below. The Project site:

- Is completely developed with agriculture and is within an area that is heavily influenced by agriculture, which limits opportunities for habitat continuity and wildlife movement. The lack of open natural habitat in the surrounding areas significantly limits the movement of wildlife across the Project site and region.
- Does not contain wildlife travel routes, such as a riparian strip, ridgeline, drainage, or waterway; or wildlife crossings, such as a tunnel, large culvert, or underpass that would connect open space areas.
- Does not provide connectivity between large areas of open space on a local or regional scale.
- Does not contain suitable cover, food, or water to adequately support wildlife species and enable movement through the Project site and region.

Therefore, surveys were not conducted to evaluate wildlife movement at the Project site.

4.0 FIELD SURVEY METHODS

Surveys were conducted during daylight hours and not during abnormal or excessive cold, heat, wind, rain, or other inclement weather. Surveys were conducted on foot and by vehicles. The 150-meter buffer around the Project site was surveyed using binoculars, due to access limitations. Observations were also made with aerial imagery for inaccessible areas.

Biologists used pertinent regional flora/fauna field guides and aerial maps during the field surveys. In addition, Eos Arrow 100 sub-meter Global Positioning System (GPS) units, tablets loaded with the ArcGIS Collector application, and aerial maps were used to collect locational data and record relevant attributes of features or species encountered. Photographs that were taken during the field surveys are provided in Appendix A. Data collected during the site visits was recorded in field notebooks, in ArcGIS Collector, on data forms, and on aerial photographs.

4.1 GENERAL BIOLOGICAL SURVEY

Biologists characterized the existing land cover and surveyed for the presence of sensitive plant communities within the BSA (the Project site and 150-meter buffer). Vegetation communities within the BSA were mapped on a tablet in accordance with the *Manual of California Vegetation, Second Edition* (Sawyer et al. 2009). Vegetation was mapped to the alliance level, which is defined by plant species composition and identified by the most dominant tree, shrub, or herb in the vegetation community. Given the disturbed nature of the Project site, and dominance by primarily non-native plant species, a best attempt to categorize vegetation communities according to Sawyer et al. was made. However, in the case that membership rules/community definitions were not met, new alliances were named according to a best fit for the dominant species observed, aligned to the *Manual of California Vegetation, Second Edition* structure.

During the general biological survey, biologists surveyed the BSA for common plants and for the presence of special-status plant species and their habitats. Identified plants were recorded in field notes. Plant species were identified in the field and in the office. Special-status plant species numbers were estimated (for large populations) and population boundaries were mapped with a tablet and synced sub-meter receiver.

Similarly, biologists surveyed the BSA for common wildlife and for the presence of special-status wildlife species and their habitats. Biologists also surveyed for signs of wildlife, including animal tracks, burrows, dens, nests, nest sites, scat, or remains. Wildlife signs and wildlife species encountered visually or audibly during the field surveys were identified and recorded in field notes. Special-status wildlife species were mapped with a tablet and synced sub-meter receiver.

The general biological survey was combined with the protocol BUOW habitat assessment and burrow survey. During this survey, 100 percent visual coverage of the ground surface was performed by three surveyors walking no more than 30 meters apart.

4.2 RAPTOR HABITAT ASSESSMENT

Biologists assessed the BSA and a 1-mile buffer around the Project by vehicle for suitable raptor habitat. The survey was conducted between sunrise to 12:00 p.m. or 4:30 p.m. to sunset in accordance with the *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (Swainson's Hawk Technical Advisory Committee 2000). Biologists used binoculars to survey potential trees and other features (e.g., power poles) that could be used for raptor nesting. Visual surveys for nests and perched raptors were performed. Notes were recorded on any raptor observations (e.g., species, number of individuals observed, behavior), and any active raptor nests were mapped. Swainson's

hawk (*Buteo swainsoni*) nests previously recorded within the 1-mile buffer around the Project in 2011 for the Tranquillity Solar Project were checked during the survey. For all Swainson’s hawk nests that were found, nest checks were conducted concurrently with the protocol BUOW breeding season surveys to record nesting data (e.g., nest status, number Swainson’s hawks observed, behavior, and evidence of chicks or fledglings).

4.3 SAN JOAQUIN KIT FOX HABITAT ASSESSMENT

During the general biological survey, biologists also evaluated the BSA for potential San Joaquin kit fox habitat. Given that all vegetated areas of the Project site had previously been disked/tilled, it is unlikely that the site would be occupied by San Joaquin kit fox; therefore, protocol surveys were not performed. During the BUOW burrow survey that required 100 percent visual coverage of the ground surface, biologists also surveyed for and mapped potential kit fox dens.

4.4 FIELD SURVEYS CONDUCTED

Table 1 lists the field surveys that were conducted in 2020.

Table 1. Field Surveys Conducted

Field Surveys Conducted	Dates	Notes
General biological survey	May 4-8, 2020	Conducted concurrently with the BUOW habitat assessment and burrow survey and San Joaquin kit fox habitat assessment.
Protocol BUOW habitat assessment & burrow survey*	May 4-8, 2020	Conducted concurrently with the general biological survey.
Protocol breeding season BUOW surveys*	May 9, 2020; June 11, 2020; July 10, 2020	None.
Protocol winter season BUOW surveys*	January 4-5, 2021	None.
Raptor habitat assessment	April 16-17, 2020	None.
Swainson’s hawk nest checks	May 9, 2020; June 11, 2020; July 10, 2020	Additional checks of active Swainson’s hawk nests were conducted.
San Joaquin kit fox habitat assessment	May 4-8, 2020	Conducted concurrently with the general biological survey.
Jurisdictional delineation*	May 8-9, 2020	Focused delineation at potential jurisdictional areas identified during the general biological survey.

Note: *Results of the BUOW surveys and Jurisdictional Delineation are provided in separate reports.

5.0 RESULTS

5.1 VEGETATION COMMUNITIES

Vegetation communities within the BSA were mapped during the survey (Figure 6). No CDFW sensitive natural communities were found. All vegetated areas of the Project site had previously been disked/tilled. Table 2 summarizes the five vegetation communities observed and their corresponding acreage; acreage includes the Project site and 150-meter buffer (i.e., the BSA). Descriptions of the communities are provided below.

Table 2: Vegetation Communities

Vegetation Communities	Acres within BSA
<i>Hordeum murinum</i> – <i>Sisymbrium irio</i> Herbaceous Semi-Natural Alliance	1,067.2
<i>Hirschfeldia incana</i> – <i>Salsola</i> sp. Herbaceous Semi-Natural Alliance	571.3
Developed	55.9
Cultivated Pistachio	40.6
<i>Atriplex coronata</i> var. <i>coronata</i> - <i>Stellaria media</i> Herbaceous Semi-Natural Alliance	20.4
Total	1,755.4*

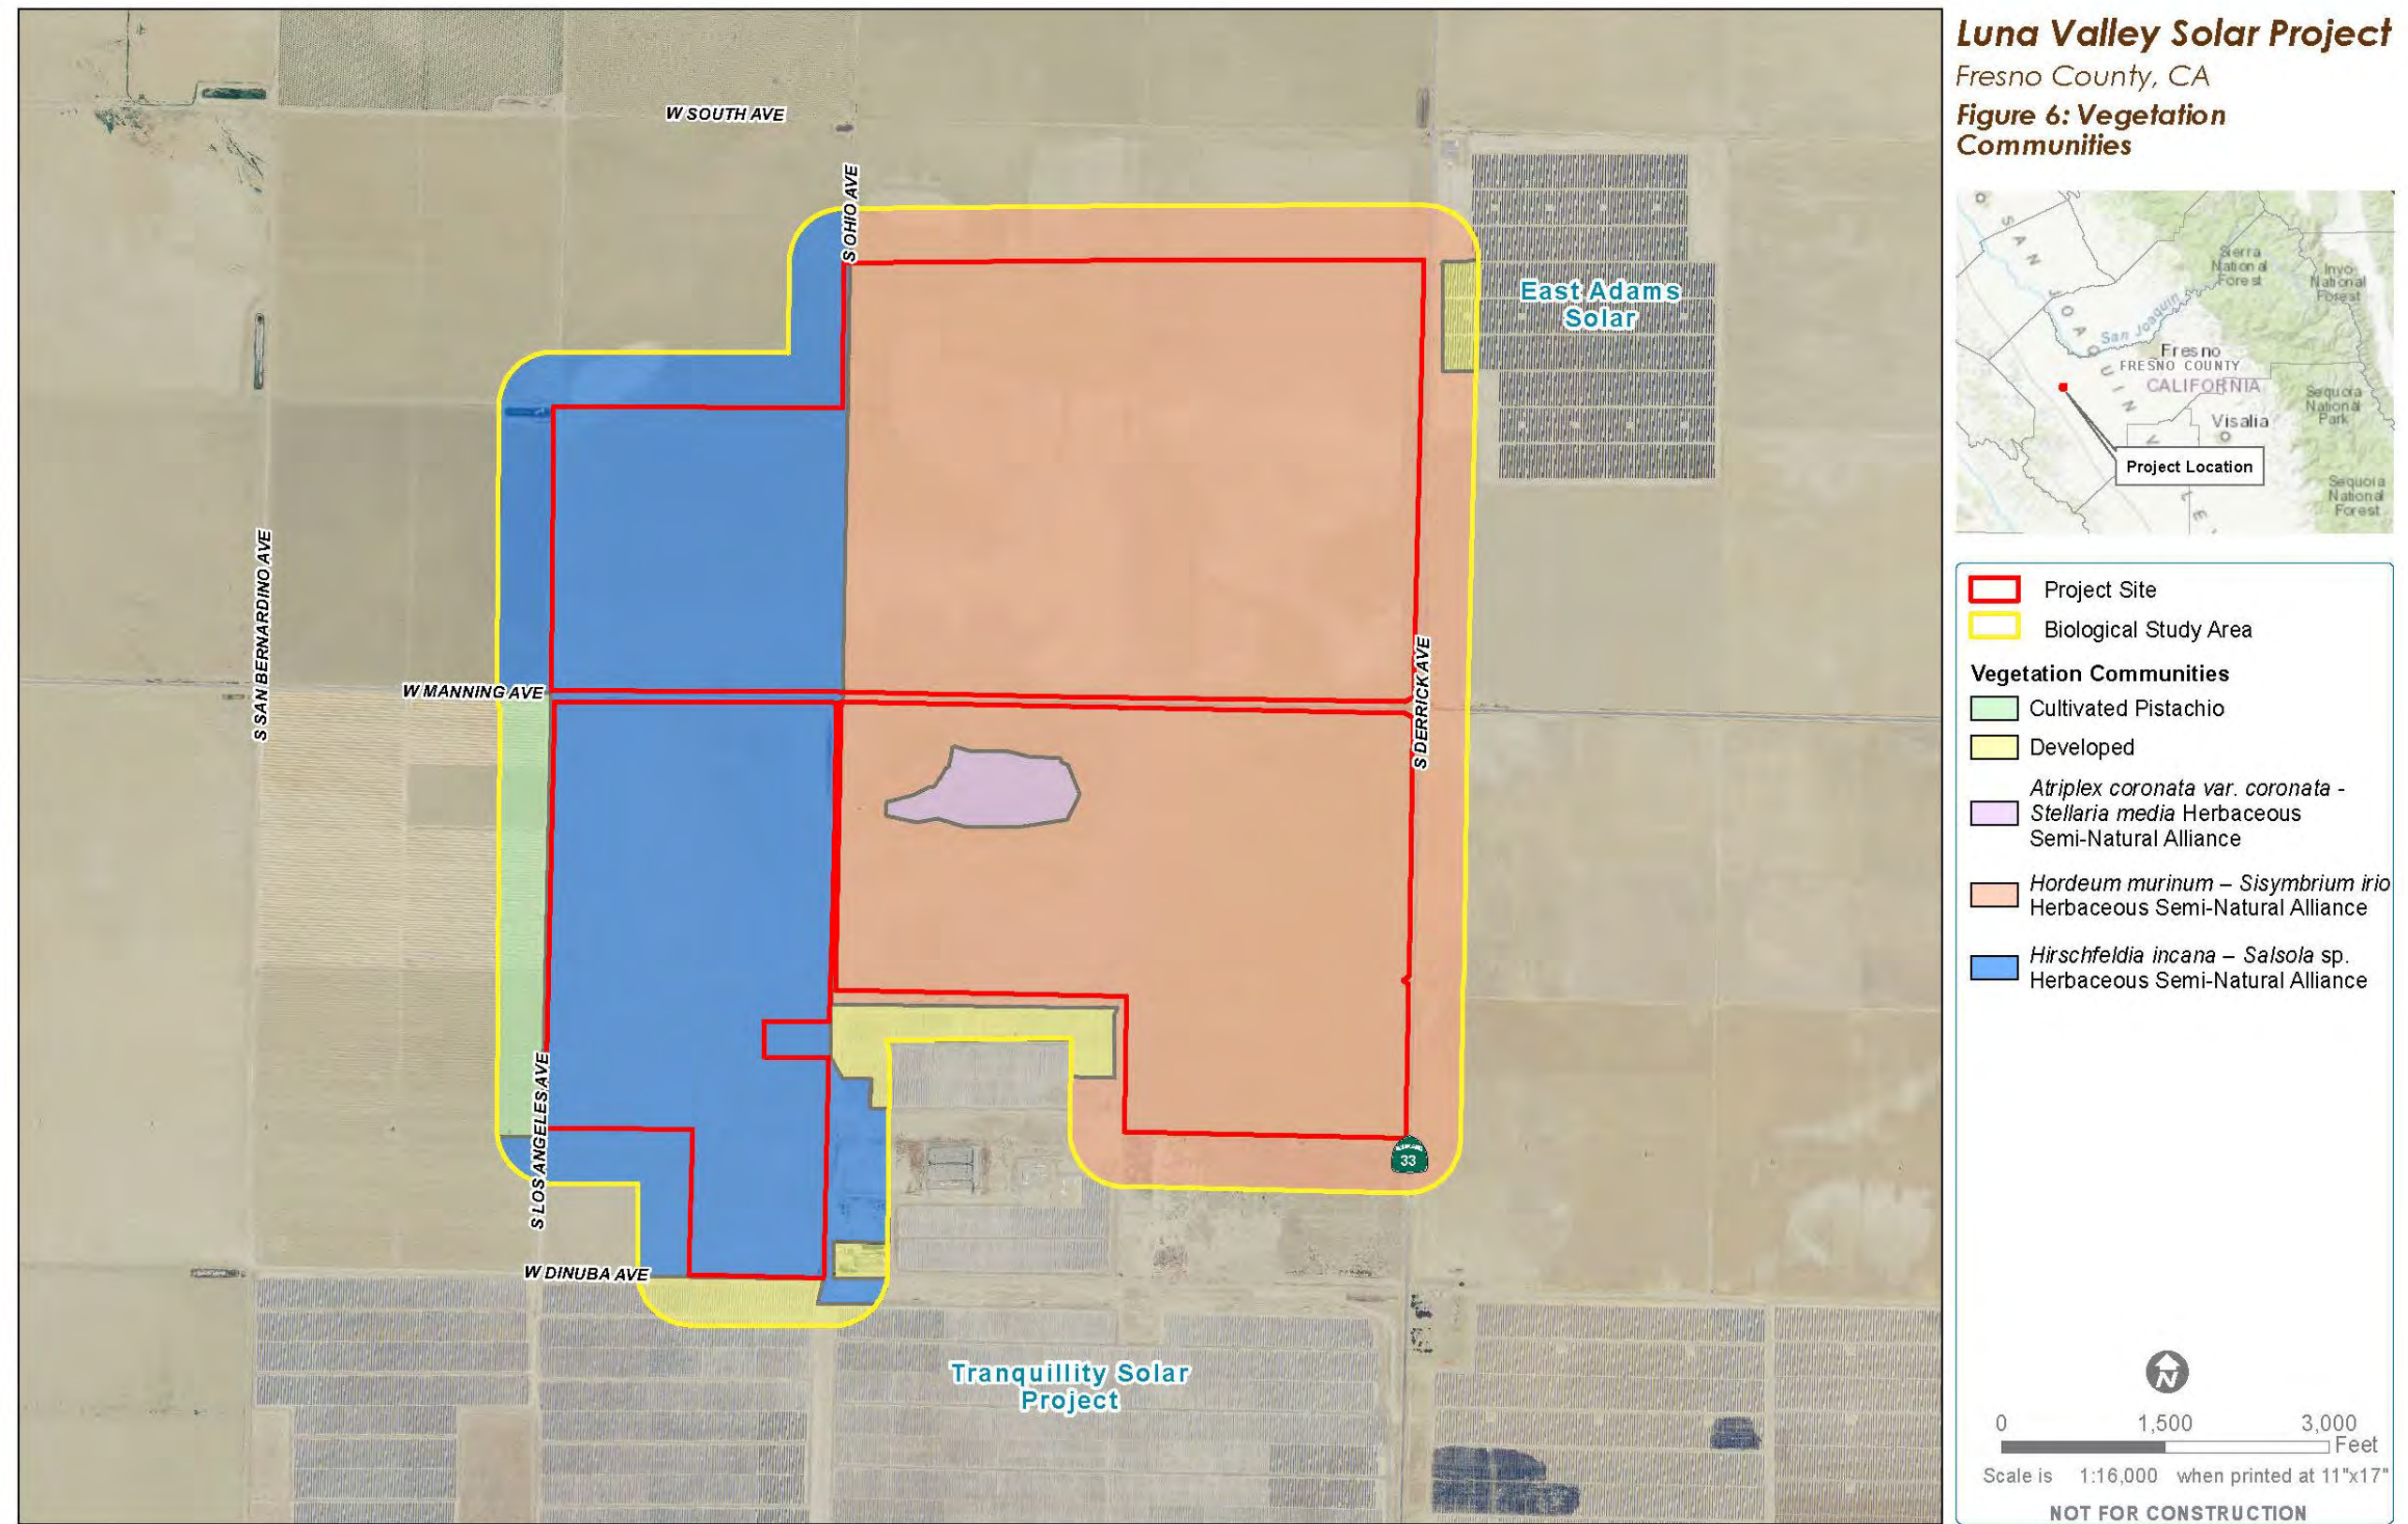

Note: Total acres include the Project site and 150-meter buffer.

Over 60 percent of the BSA consisted of non-native grasslands in the *Hordeum murinum* – *Sisymbrium irio* Herbaceous Semi-Natural Alliance. This alliance is considered a semi-natural alliance, which is defined as a vegetation community dominated by non-native plants that are naturalized (i.e., growing in the wild and reproducing) in California. The remainder of the BSA consisted predominantly of areas with high cover of bare ground and low cover of forbs in the *Hirschfeldia incana* – *Salsola* sp. Herbaceous Semi-Natural Alliance. Developed areas, recently planted rows of cultivated pistachio, and one small area dominated by native and non-native forbs in the *Atriplex coronata* var. *coronata* - *Stellaria media* Herbaceous Semi-Natural Alliance were also found.

No mature trees were found within the Project site. One willow tree (*Salix* sp.) was found on the southwest boundary of the site and one saltcedar tree (*Tamarisk ramosissima*) was found on the northeast boundary. Two isolated trees and a small area with approximately eight trees were found within the 1-mile site buffer to the south. In addition, north (outside) of the 1-mile site buffer, two small areas with saltcedar trees were found, one with approximately six trees, and one with approximately ten trees.

***Hordeum murinum* – *Sisymbrium irio* Herbaceous Semi-Natural Alliance.** This community was the most common throughout the site and contained the following dominant plant species: non-native wall barley (*Hordeum murinum*), non-native London rocket (*Sisymbrium irio*), and non-native shortpod mustard (*Hirschfeldia incana*). Cover of vegetation varied from dense herbs and no visible bare ground, to large patches of bare ground and sparse vegetation.

***Hirschfeldia incana* – *Salsola* sp. Herbaceous Semi-Natural Alliance.** This community occurred primarily on the western portion of the site and consisted of the following dominant plant species: non-native shortpod mustard and non-native Russian thistle (*Salsola* sp.). Large patches of bare ground occurred in this community and the area appeared to have been recently disked/tilled. Other native and non-native forbs were present, but with lower coverage than shortpod mustard and Russian thistle.

***Atriplex coronata* var. *coronata* - *Stellaria media* Herbaceous Semi-Natural Alliance.** This community was found in the central portion of the site and contained the following dominant plant species: crownscale (*Atriplex coronata* var. *coronata*) and common chickweed (*Stellaria media*). Other native and non-native plants were present, such as native big saltbush (*Atriplex lentiformis*) that was stunted, but with lower coverage than crownscale and common chickweed. The variety of crownscale observed is a CNPS Rank 4.2 species and is discussed in the section below.

Cultivated Pistachio. This community occurred only on the western end of the 150-meter buffer and contained immature planted pistachio trees.

Developed. These areas only occurred in the 150-meter buffer and contained solar panels and fencing associated with the adjacent Tranquillity Solar Project and East Adams Solar Project.

5.2 SPECIAL-STATUS SPECIES

Special-status plant and wildlife species and habitats that could support these species were recorded within the BSA. Conclusions and recommendations for these species are discussed in Section 6 of this report. One rare annual forb, crownscale (CNPS Rank 4.2), was positively identified during the survey. This species is known to occur in alkaline, often clay soils, in chenopod scrub, valley and foothill grassland, and vernal pool habitats. CNPS Rank 4 is the watch list, indicating that the species is of limited distribution or infrequent throughout a broad area in California; CNPS Threat Rank 0.2 indicates that the species is moderately threatened in the state (20 to 80 percent of occurrences threatened). This species was dominant in the *Atriplex coronata* var. *coronata* - *Stellaria media* Herbaceous Semi-Natural Alliance vegetation community (20.4 acres; Figure 6) but was not found elsewhere within the BSA. The population of crownscale in this area was estimated at over 5,000 individuals.

It was determined that the Project site is in the known distributional range of the BUOW and the entire site contains potentially suitable BUOW habitat due to low-growing vegetation and agricultural use. The closest BUOW occurrence from CNDDB is 5 miles away from the Project site. BUOW is a CDFW Species of Special Concern. BUOWs breed and live in burrows and use coastal prairie, coastal scrub, Great Basin grassland, Great Basin scrub, Mojavean Desert scrub, Sonoran Desert scrub, and valley and foothill grassland habitats as well as agricultural areas or any open dry area with low vegetation. No small mammal burrows dug in soil that would be considered suitable for BUOW were documented within the BSA. A total of 15 potentially suitable burrow surrogates (i.e., man-made structures) were found on the boundary of the Project site and within the BSA, which included 10 culvert locations, four individual pipes, and one pile of pipes. Potential sign in the form of whitewash was observed at three locations but could be from any bird species utilizing the site. During the winter seasons surveys, biologists revisited the potential suitable burrow surrogates. During this survey, cast pellets were observed at two pipes. Cast pellets were observed on the ground and were not near raptor perches. This indicates that they were likely from BUOW. All potential burrow surrogates occurred adjacent to existing roads on the boundary of the site and within the BSA. BUOWs were not detected during the protocol breeding season surveys. Although no BUOWs were also observed during winter season surveys, the presence of cast pellets indicate that owls are likely to be using the site. Results of the BUOW surveys are detailed in the BUOW survey report.

Special-status wildlife species found during the survey are shown in Figure 7. The Swainson's hawk is listed as Threatened in California and is known to occur in Great Basin grassland, riparian forest, riparian woodland, and valley and foothill grassland habitats. This species nests in California in trees and on made-made structures such as power poles between March 1 and September 15. Two adult Swainson's hawks were observed perched on two nearby power poles on the eastern boundary of the Project site on multiple survey days in May and June (Figure 7). Three active Swainson's hawk nests with numerous individuals present near the nests were also found within 1-mile of the Project site, one of which was in a willow tree

approximately 80 feet outside the Project boundary (Figure 8). Details on these nests are provided in Section 5.4 of this report.

The California horned lark (*Eremophila alpestris actia*) is a CDFW Watch List species and is known to occur in short-grass prairie, mountain meadow, open coastal plain, fallow grain field, and alkali flat habitats. This species nests on the ground and uses areas cleared by humans such as agricultural fields for nesting and foraging. One active horned lark nest with four eggs was observed on the ground within the Project site (Figure 7).

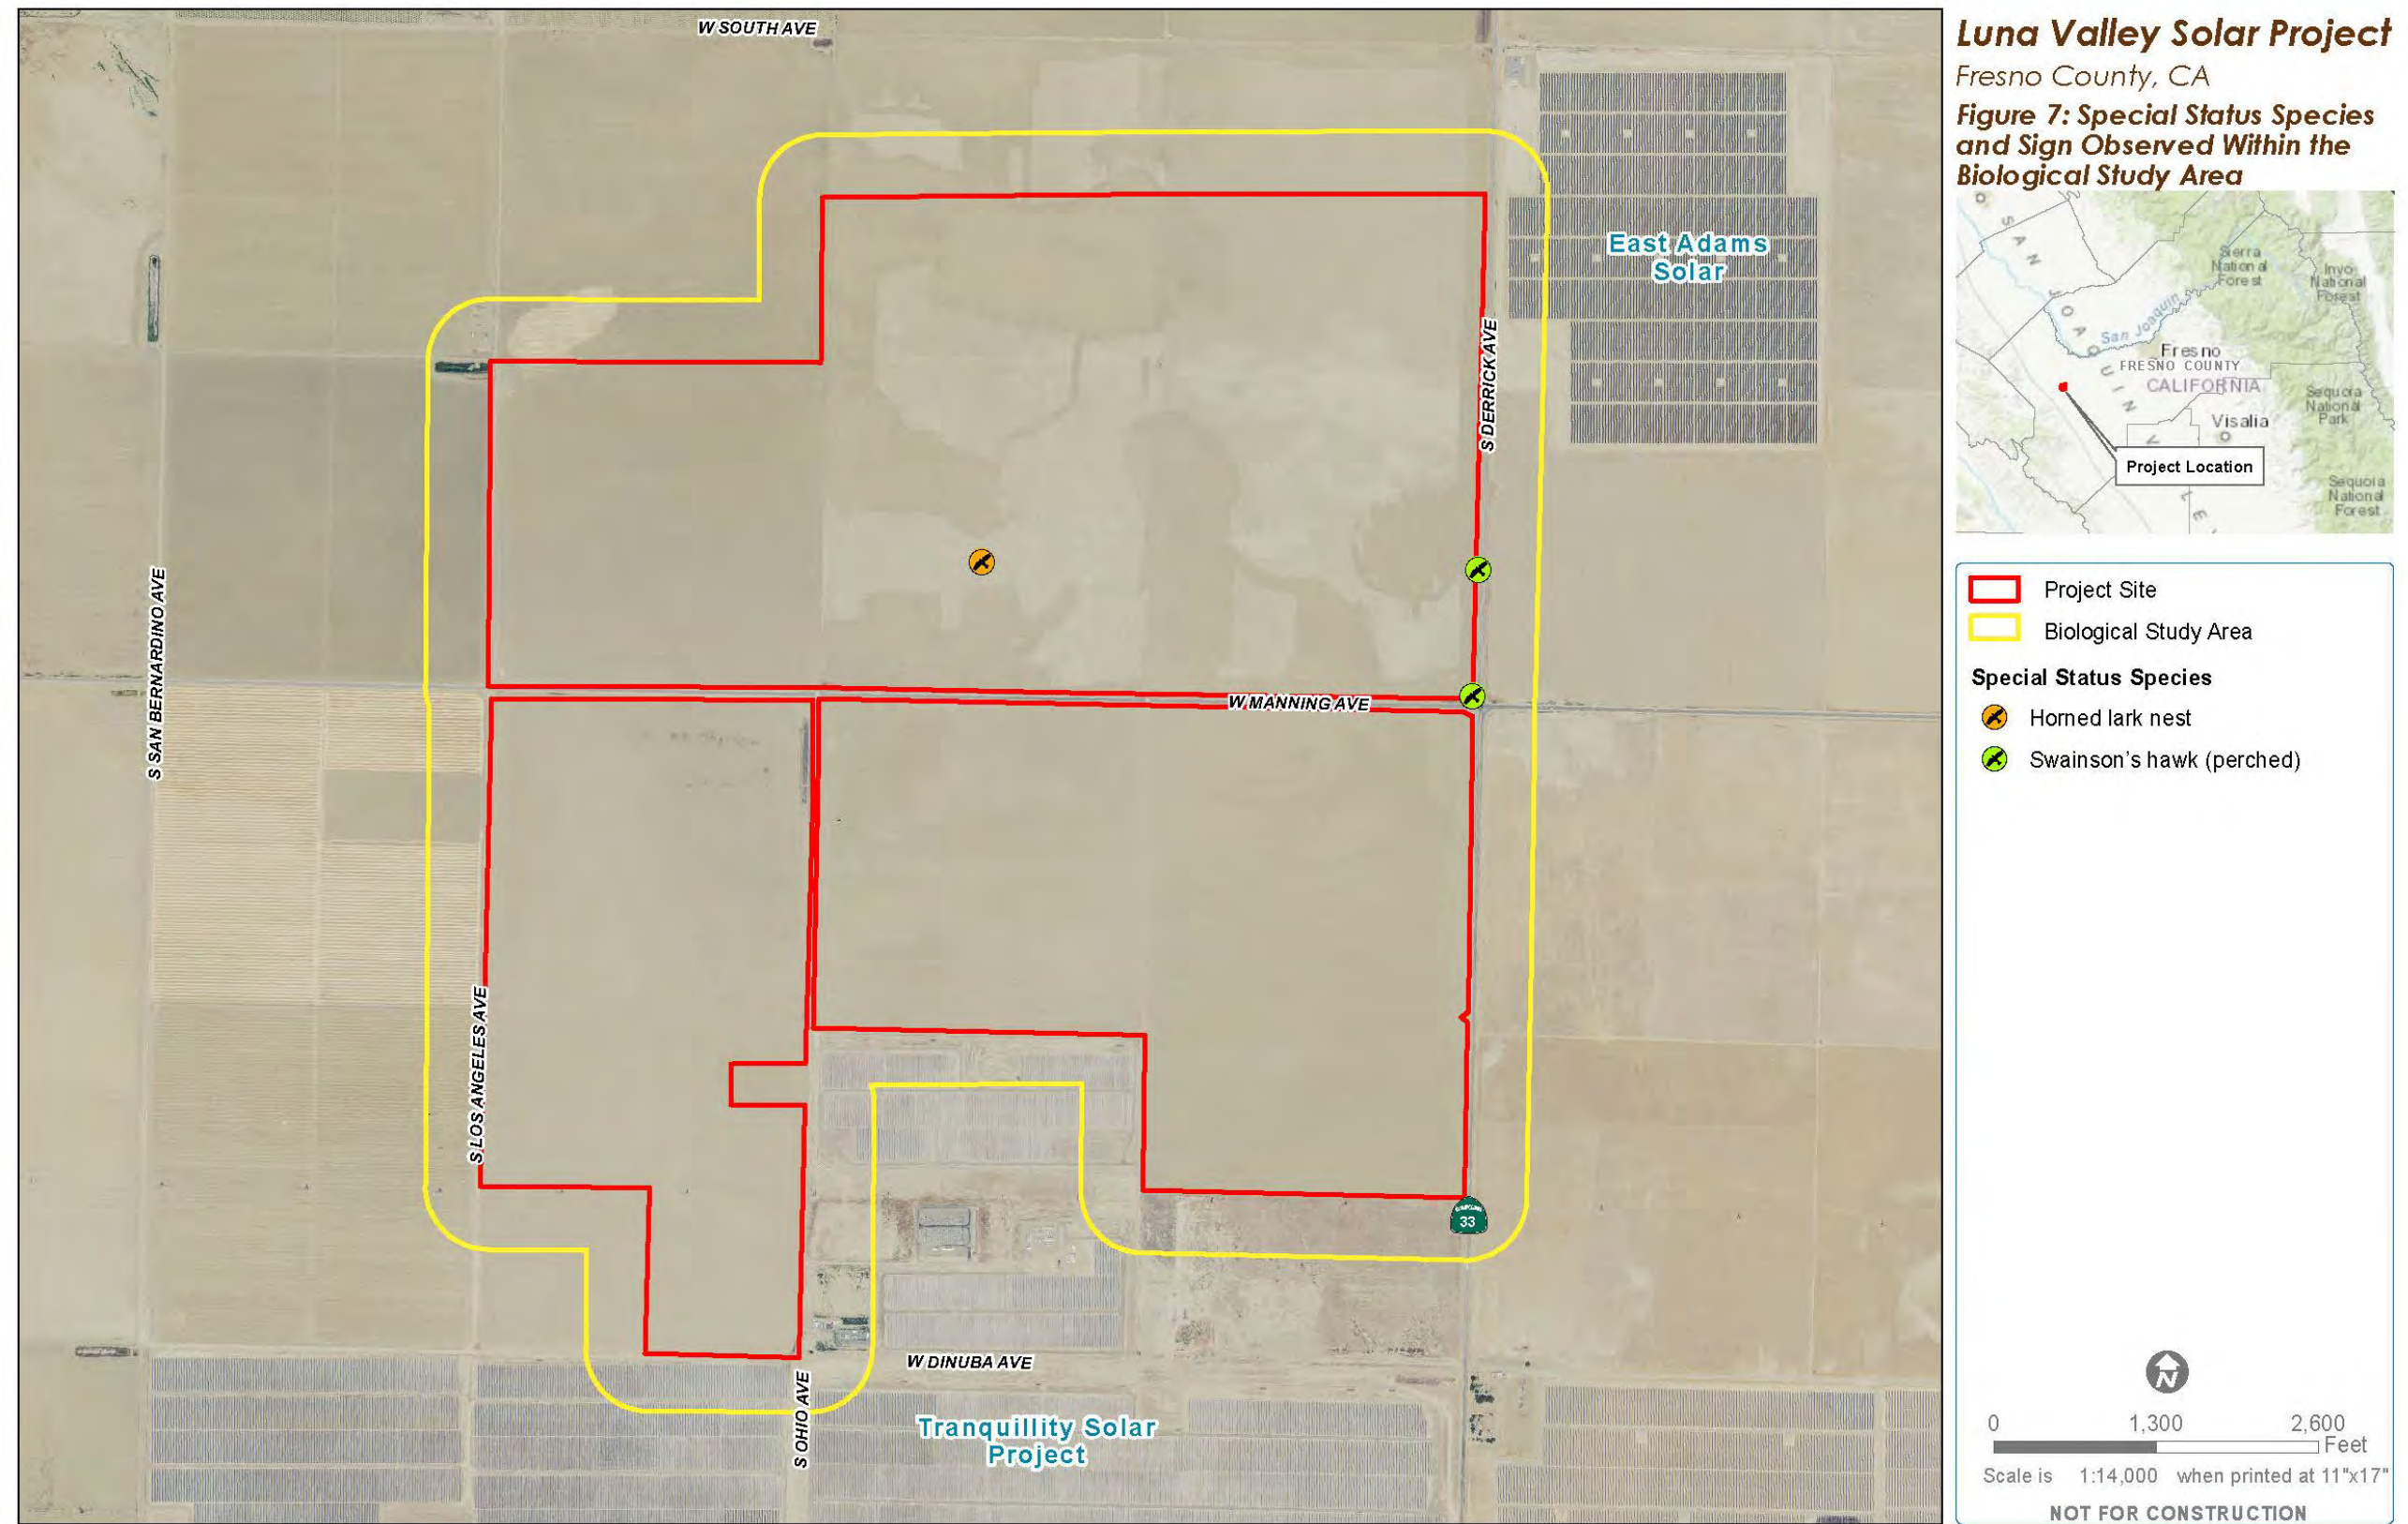

The northern harrier (*Circus hudsonius*) and loggerhead shrike (*Lanius ludovicianus*) are both CDFW Species of Special Concern. Northern harriers nest on the ground mostly within patches of dense, often tall, vegetation and use coastal scrub, Great Basin grassland, marsh and swamp, riparian scrub, valley and foothill grassland, and wetland habitats as well as weed fields and croplands. Loggerhead shrikes nest within trees and shrubs and use broadleaved upland forest, desert wash, Joshua tree woodland, Mojavean Desert scrub, piñon and juniper woodlands, riparian woodland, and Sonoran Desert scrub habitats. Transient northern harrier and loggerhead shrike were observed in the vicinity of the Project Site but no nests of these species were found.

Native birds and their nests are protected under the Federal Migratory Bird Treaty Act (MBTA). Active nests of great horned owl (*Bubo virginianus*), common raven (*Corvus corax*), and red-tailed hawk (*Buteo jamaicensis*) were found on the boundary and within 1-mile of the Project site (Figure 8). While these species are not federally or state listed, their active nests are protected under the MBTA. Details on these nests are provided in Section 5.4 of this report.

The San Joaquin kit fox is federally listed as Endangered and state listed as Threatened. No large underground holes or burrows dug in soil were found that would be considered suitable dens for this species – or for the American Badger (*Taxidea taxus*), a CDFW Species of Special Concern. Culverts and pipes found at the Project site are described above, which were located on existing roads along the boundary of the site and within the BSA. No culverts or pipes were found within the development area of the Project site. These were of sufficient size for San Joaquin kit fox and could potentially be used for denning. Two of the individual pipes were elevated over one foot above the ground, and therefore, are not considered suitable for kit fox. San Joaquin kit fox is discussed in Section 5.5 of this report. Culverts are also sometimes used by American badgers for refuge or to pass safely beneath roads.

Small mammal holes were observed on the site but were less than 2 inches in diameter and were not suitable for BUOW, San Joaquin kit fox, or American badger. No special-status species were associated with these small mammal holes.

Potential and observed special-status plant and wildlife species that may occur within the Project site based on the literature review have been reviewed and updated, based on the results of the field surveys. The potential to occur for each species has been analyzed. These species are presented in Table 3.

Table 3: Special-status Species with Potential to Occur on the Project Site

Scientific Name	Common Name	Federal Status	State Status/ Other Status	Habitat	Potential to Occur*
<i>Atriplex coronata</i> var. <i>coronata</i>	crownscale	None	CNPS Rank 4.2	Alkaline, often clay soils, chenopod scrub, valley and foothill grassland, vernal pools	Observed. This species was dominant in the <i>Atriplex coronata</i> var. <i>coronata</i> - <i>Stellaria media</i> Herbaceous Semi-Natural Alliance vegetation community and the population was estimated at over 5,000 individuals.
<i>Asio flammeus</i>	short-eared owl	None	SSC	Great Basin grassland, marsh and swamp, meadow and seep, valley and foothill grassland, wetland	Medium. The two closest occurrence records of short-eared owl are approximately 6 miles from the site and this species is known to use agricultural areas. This species nests on dry ground typically concealed in vegetation, occasionally in a burrow. While this species was not observed, potential nesting and foraging habitat was found within the site. Therefore, potential to occur is medium.
<i>Athene cunicularia</i>	burrowing owl	None	SSC	Coastal prairie, coastal scrub, Great Basin grassland, Great Basin scrub, Mojavean Desert scrub, Sonoran Desert scrub, valley and foothill grassland	High. The closest occurrence record is approximately 5 miles from the site and this species is known to use agricultural areas or any open dry area with low vegetation. While this species was not observed during the protocol survey, potential burrow surrogates (culverts and pipes) were found on the site boundary along existing roads. During winter season surveys, cast pellets were observed at two pipes, indicating use by BUOW. Therefore, potential to occur is high.
<i>Buteo swainsoni</i>	Swainson's hawk	None	Threatened	Great Basin grassland, riparian forest, riparian woodland, valley and foothill grassland	Observed. The closest occurrence record of Swainson's hawk is approximately 1.5 miles from the site. This species could nest within the site (power poles and towers), nest off-site nearby (trees), and forage within the site. Three active nests of this species were found within 1-mile of the site, one of which was on the site boundary. Numerous individuals were observed in the vicinity of the site.

Scientific Name	Common Name	Federal Status	State Status/ Other Status	Habitat	Potential to Occur*
<i>Charadrius montanus</i>	mountain plover	None	SSC	Chenopod scrub, valley and foothill grassland	Medium. The closest occurrence record of mountain plover is approximately 4 miles from the site and this species is known to use agricultural areas. This species does not breed in California. While this species was not observed, potential foraging habitat was found within the site. Therefore, potential to occur is medium.
<i>Circus hudsonius</i>	northern harrier	None	SSC	Coastal scrub, Great Basin grassland, marsh and swamp, riparian scrub, valley and foothill grassland, wetland	Observed. An individual of this species was observed flying over the site but no nests were found. While this species is known to forage in weed fields and croplands that were found within the site, they nest on the ground mostly within patches of dense, often tall, vegetation in undisturbed areas. This species is unlikely to nest within or near the site.
<i>Eremophila alpestris actia</i>	California horned lark	None	WL	Short-grass prairie, mountain meadows, open coastal plains, fallow grain fields, alkali flats	Observed. The closest occurrence record of this species is approximately 6 miles from the site and this species is known to use areas cleared by humans such as agricultural fields for nesting and foraging. One active horned lark nest was found on the ground within the site.
<i>Falco columbarius</i>	merlin	None	WL	Estuary, Great Basin grassland, valley and foothill grassland	Medium. The closest occurrence record of merlin is approximately 9.5 miles from the site. This species can occur in agricultural areas. This species does not breed in California. While this species was not observed, potential foraging habitat was found within the site. Therefore, potential to occur is medium.

Scientific Name	Common Name	Federal Status	State Status/ Other Status	Habitat	Potential to Occur*
<i>Falco mexicanus</i>	prairie falcon	None	WL	Great Basin grassland, Great Basin scrub, Mojavean Desert scrub, Sonoran Desert scrub, valley and foothill grassland	Medium. The closest occurrence record of prairie falcon is approximately 6.5 miles from the site. Most nests are built on cliff faces but this species also nests in trees, on powerline structures, in caves or stone quarries, and on buildings. While this species was not observed, it could nest within the site (power poles and towers), nest off-site nearby (trees), and forage within the site. Therefore, potential to occur is medium.
<i>Lanius ludovicianus</i>	loggerhead shrike	None	SSC	Broadleaved upland forest, desert wash, Joshua tree woodland, Mojavean Desert scrub, pinon and juniper woodlands, riparian woodland, Sonoran Desert scrub	Observed. Individuals of this species were observed perched within and near the site on fences and powerlines but no nests were found. This species is unlikely to nest within the site due to lack of trees and shrubs but could nest near the site.

Scientific Name	Common Name	Federal Status	State Status/ Other Status	Habitat	Potential to Occur*
<i>Dipodomys ingens</i>	giant kangaroo rat	Endangered	Endangered	Chenopod scrub, valley and foothill grassland	Low. The closest occurrence record of giant kangaroo rat is approximately 6.5 miles from the site, but all records within 10 miles of the site are historical (dated between 1967-1992). All occurrence records and the extant population area of this species are separated from the site by numerous barriers including agricultural, industrial, and urban land that offer no habitat, as well as roads, highways, and the California aqueduct. This species prefers annual grassland on gentle slopes of generally less than 10 percent, with friable, sandy-loam soils. Agricultural areas offer little to no habitat. While non-native annual grassland and softer soils were observed on the site, these areas were flat and no sandy-loam soils were found. Numerous species of common kangaroo rat may occur at the site. One kangaroo rat was observed on the site and it was determined to not be a special-status species based on the rationale above. Therefore, potential to occur is low.
<i>Eumops perotis californicus</i>	western mastiff bat	None	SSC	Chaparral, cismontane woodland, coastal scrub, valley and foothill grassland	Low. The closest occurrence record of this species is approximately 9 miles from the site. This species roosts high above the ground in crevices and shallow caves on the sides of cliffs and rock walls. While this species has the potential to forage in agricultural areas on the site, no roosting areas were found within the site or nearby. Therefore, potential to occur is low.

Scientific Name	Common Name	Federal Status	State Status/ Other Status	Habitat	Potential to Occur*
<i>Perognathus inornatus</i>	San Joaquin pocket mouse	None	None	Cismontane woodland, Mojavean Desert scrub, valley and foothill grassland	Low. The closest occurrence record of this species is from 2016 and is approximately 8.5 miles from the site. This occurrence is separated from the site by numerous barriers, including Interstate 5. This species mostly occurs in uncultivated areas. The overall distribution of this species includes dry, open grasslands or scrub areas on fine-textured soils between 1,100 and 2,000 feet (350 and 600 meters) in the Central and Salinas valleys. All vegetated areas of the site had previously been disked/tilled, are unlikely to be occupied by this species, and no burrows for this species were found. Therefore, potential to occur is low.
<i>Taxidea taxus</i>	American badger	None	SSC	Numerous shrub, forest, and herbaceous habitats, with friable soils	Medium. The closest occurrence of this species is approximately 10 miles from the site, but this species is known to use agricultural areas. All vegetated areas of the site had previously been disked/tilled and are unlikely to be occupied by this species. While this species was not observed and no potentially suitable burrows dug in soil were found, this species could occur within the site in the future if suitable burrows become available. Culverts, which were found on the site boundary along existing roads, are sometimes used by this species for refuge or to pass safely beneath roads. Therefore, potential to occur is medium.

Scientific Name	Common Name	Federal Status	State Status/ Other Status	Habitat	Potential to Occur*
<i>Vulpes macrotis mutica</i>	San Joaquin kit fox	Endangered	Threatened	Chenopod scrub, valley and foothill grassland	Medium. The two closest occurrences of this species are approximately 4.5 miles from the site and this species is known to use agricultural areas. All vegetated areas of the site had previously been disked/tilled and are unlikely to be occupied by this species. While this species was not observed at the site, 10 culvert locations, three individual pipes, and one pile of pipes of sufficient size were found on the boundary of the site and within the BSA that could potentially be used by this species. Two of the individual pipes listed above were elevated over one foot above the ground, and therefore, are not considered suitable for this species. All culverts and pipes were found on the site boundary along existing roads. Therefore, potential to occur is medium.
<i>Arizona elegans occidentalis</i>	California glossy snake	None	SSC	Scrub and grassland habitats, often with loose or sandy soils	Low. The site is highly disturbed and consists almost entirely of active dry-farming agricultural areas. The closest occurrence of this species is from 2014 and is approximately 10 miles from the site. This occurrence is separated from the site by numerous barriers, including Interstate 5. This species was not observed during the surveys. While the site has softer soils due to previous agricultural use, they are not sandy. Therefore, potential to occur is low.
<i>Masticophis flagellum ruddocki</i>	San Joaquin coachwhip	None	SSC	Chenopod scrub, valley and foothill grassland	Low. This species uses open, dry, treeless areas with little or no cover and the closest occurrence is approximately 6.5 miles from the site. However, it is sensitive to disturbance, does not persist in cultivated areas, and was not observed during the surveys. Therefore, potential to occur is low.

Scientific Name	Common Name	Federal Status	State Status/ Other Status	Habitat	Potential to Occur*
<i>Phrynosoma blainvillii</i>	coast horned lizard	None	SSC	Chaparral, cismontane woodland, coastal bluff scrub, coastal scrub, desert wash, pinon and juniper woodlands, riparian scrub, riparian woodland, valley and foothill grassland	Low. The site is highly disturbed and consists almost entirely of active dry-farming agricultural areas. The closest occurrence record of this species is approximately 9.5 miles from the site. This species needs a combination of shrub cover and open space for refuge and foraging and is usually not found in agricultural areas. In addition, this species was not observed during the surveys. Therefore, potential to occur is low.
<i>Bombus crotchii</i>	crotch bumble bee	None	Candidate Endangered	Defined by presence of thatch, soft soil, and flowering plants. This species primarily nests underground.	Low. The closest occurrence record of this species is over 15 miles from the site. No bumble bees were observed during the surveys, which were conducted when this species would have been observable aboveground during the flight period for both queens (late February to late October) and workers (late March through September). While softer soils and minimal thatch in the form of dead non-native herbs were found during the survey, dead vegetation primarily occurred as standing dead plants. Potential nectar sources were sparse within the BSA, predominantly non-native, and were considered relatively low quality sources. No plants in the <i>Medicago</i> genera, of which alfalfa is included, were observed on the site. Therefore, potential to occur is low.

Notes: SSC = CDFW Species of Special Concern; WL = CDFW Watch List.

*Closest occurrence records are from the CNDDDB (CDFW 2020b).

5.3 PLANTS AND WILDLIFE

All plant and wildlife species observed in the BSA during the surveys were recorded. These species are listed in Tables 4 and 5.

Table 4: Plant Species Observed Within BSA

Scientific Name	Common Name
<i>Amaranthus</i> sp.	amaranth
<i>Amsinckia menziesii</i>	common fiddleneck
<i>Atriplex coronata</i> var. <i>coronata</i> **	crownscale
<i>Atriplex lentiformis</i>	big saltbush
<i>Avena</i> sp.*	oat
<i>Bassia hyssopifolia</i> *	five horn bassia
<i>Bromus diandrus</i> *	ripgut grass
<i>Bromus madritensis</i> *	foxtail chess
<i>Bromus tectorum</i> *	cheat grass
<i>Capsella bursa-pastoris</i> *	shepherd's purse
<i>Centromadia pungens</i>	common spikeweed
<i>Chenopodium album</i> *	lamb's quarters
<i>Conium maculatum</i> *	poison hemlock
<i>Convolvulus arvensis</i> *	bindweed
<i>Cuscuta</i> sp.	dodder
<i>Cynodon dactylon</i> *	Bermuda grass
<i>Erigeron canadensis</i>	horseweed
<i>Erodium cicutarium</i> *	redstem filaree
<i>Helianthus annuus</i>	common sunflower
<i>Heliotropium curassavicum</i>	heliotrope
<i>Hirschfeldia incana</i> *	Mediterranean hoary mustard
<i>Hordeum murinum</i> *	wall barley
<i>Lactuca serriola</i> *	prickly lettuce
<i>Lolium</i> sp.*	rye grass
<i>Malacothrix coulteri</i>	Snake's-head
<i>Malva parviflora</i> *	cheeseweed
<i>Malvella leprosa</i>	alkali-mallow
<i>Marrubium vulgare</i> *	white horehound
<i>Matricaria discoidea</i>	pineapple weed
<i>Phacelia</i> sp.	phacelia
<i>Phalaris lemmonii</i>	Lemmon's canary grass
<i>Pistacia</i> sp.*	pistachio
<i>Polygonum argyrocoleon</i> *	Persian knotweed
<i>Polypogon monspeliensis</i> *	annual beard grass
<i>Rhaponticum repens</i> *	Russian knapweed
<i>Rumex crispus</i> *	curly dock
<i>Salix</i> sp.***	willow
<i>Salsola</i> sp.*	Russian thistle
<i>Senecio</i> sp.	ragwort
<i>Sisymbrium irio</i> *	London rocket
<i>Sonchus oleraceus</i> *	common sow thistle
<i>Stellaria media</i> *	common chickweed
<i>Tamarisk ramosissima</i> * / ***	saltcedar

Scientific Name	Common Name
<i>Triticum aestivum</i> *	common wheat
<i>Typha</i> sp.	cattail

Notes:

*Non-native species

**CNPB Rank 4.2: Limited distribution or infrequent throughout a broad area in California, and moderately threatened in the state (20 to 80 percent of occurrences threatened).

***These tree species were located on the boundary of the Project site.

Table 5: Wildlife Species Observed Within BSA

Scientific Name	Common Name
Mammals	
<i>Canis latrans</i>	coyote
<i>Dipodomys</i> sp.***	kangaroo rat
<i>Lepus californicus</i>	black-tailed jackrabbit
<i>Odocoileus hemionus</i>	mule deer (scat and tracks)
<i>Sylvilagus audubonii</i>	desert cottontail
Birds	
<i>Agelaius phoeniceus</i>	red-winged blackbird
<i>Bubo virginianus</i>	great horned owl
<i>Buteo jamaicensis</i>	red-tailed hawk
<i>Buteo swainsoni</i> **	Swainson's hawk
<i>Circus hudsonius</i> *	northern harrier
<i>Charadrius vociferus</i>	killdeer
<i>Corvus corax</i>	common raven
<i>Eremophila alpestris actia</i> *	California horned lark
<i>Euphagus cyanocephalus</i>	Brewer's blackbird
<i>Haemorhous mexicanus</i>	house finch
<i>Lanius ludovicianus</i> *	loggerhead shrike
<i>Spinus tristis</i>	American goldfinch
<i>Sturnella neglecta</i>	western meadowlark
Hirundinidae	swallow
<i>Tyrannus</i> sp.	kingbird

Invertebrates	
<i>Chlorochroa</i> sp.	stinkbug
<i>Gryllus</i> sp.	field cricket
Anisoptera	dragonfly
Acrididea	grasshopper
<i>Apis</i> sp.	honeybee
Phylliidae	leafbug
<i>Pieris rapae</i>	cabbage white
<i>Pituophis catenifer</i>	gophersnake
<i>Vanessa cardui</i>	painted lady

Notes:

*CDFW Species of Special Concern or Watch List

**Federal Threatened species

***Numerous species of common kangaroo rat may occur at the site. One kangaroo rat was observed on the site and it was determined to not be a special-status species (Table 3).

5.4 RAPTOR HABITAT ASSESSMENT

A raptor habitat assessment was conducted on and within 1-mile of the Project site. Potential nesting habitat included trees, power poles, and power towers. No trees were found within the Project site, but one willow tree was found on the southwest boundary of the site and one saltcedar tree was found on the northeast boundary. Power poles and towers were found within and adjacent to the site. Potential agricultural foraging habitat was found within the site and throughout the survey area. A total of nine active nests were found during the survey, three of which were occupied by Swainson’s hawk. Three additional nest checks were conducted at the Swainson’s hawk nests during subsequent site visits. Details on all active nests found during the survey are provided in Table 6 and locations are shown in Figure 8.

Table 6: Raptor Survey Nest Results

Nest ID	Scientific Name	Common Name	General Location (Nest Location)	Notes (2020)
01	<i>Bubo virginianus</i>	great horned owl	Adjacent to site boundary (power tower)	Two adult/juvenile individuals in nest (April).
02	<i>Corvus corax</i>	common raven	Within 1-mile site buffer (power tower)	One adult/juvenile individual in nest (April).
03	<i>Buteo swainsoni</i>	Swainson’s hawk	Adjacent to site boundary (tree)	Two adult/juvenile individuals present, one in nest and one perched nearby (April). One individual perched nearby (May). Two individuals on nest or perched nearby (June and July).
04	<i>Buteo swainsoni</i>	Swainson’s hawk	Within 1-mile site buffer (tree)	Two adult/juvenile individuals near nest, copulation observed (April). One individual perched nearby (May). Two individuals present, one in nest and one perched nearby (June). One individual perched nearby (July).
05	<i>Buteo swainsoni</i>	Swainson’s hawk	Outside 1-mile site buffer (tree)	One adult/juvenile individual in nest (April). One individual in nest (May). Two individuals present, one in nest and one perched nearby (June and July).
06	<i>Buteo jamaicensis</i>	red-tailed hawk	Within 1-mile site buffer (power pole)	Two adult/juvenile individuals present, one in nest and one perched nearby (April).
07	<i>Corvus corax</i>	common raven	Within 1-mile site buffer (power pole)	Two adult/juvenile individuals present, one in nest and one perched nearby. Two chicks in nest (April).
08	<i>Buteo jamaicensis</i>	red-tailed hawk	Outside 1-mile site buffer (power pole)	One adult/juvenile individual in nest (April).
09	<i>Corvus corax</i>	common raven	Outside 1-mile site buffer (power pole)	One adult/juvenile individual and at least one chick in nest (April).

5.5 SAN JOAQUIN KIT FOX HABITAT ASSESSMENT

Potential habitat and dens for San Joaquin kit fox were assessed within the BSA during the survey. Potential kit fox dens were defined as follows based on the USFWS *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox Prior to or During Ground Disturbance* (2011):

- Any suitable underground hole that has entrances of appropriate dimensions (5 to 8 inches in diameter).
- Any den or burrow of another species (e.g., coyote, badger, red fox, or ground squirrel) that has appropriate dimensions for kit fox use.
- Atypical dens such as pipes, culverts, canal banks, and other man-made features.

Typical kit fox dens may also include the following features (USFWS 2011):

- One or more entrances that are approximately 5 to 8 inches in diameter.
- Dirt berms adjacent to the entrances.
- Kit fox tracks, scat, or prey remains in the vicinity of the den.
- Matted vegetation adjacent to den entrances.

No large underground holes or burrows of other species dug in soil that would be considered suitable for San Joaquin kit fox were documented within the BSA. All vegetated areas of the Project site had previously been disked/tilled and are unlikely to be occupied by this species. However, 10 culvert locations (C1 to C10), four individual pipes (P2 to P5), and one pile of pipes (P1) of sufficient size were found on the boundary of the Project site and within the BSA that could potentially be used by kit fox (Table 7). Two of the individual pipes (P3 and P4) were elevated over one foot above the ground, and therefore, are not considered suitable for kit fox. All of these locations occurred adjacent to existing roads and are shown in the BUOW survey report. Photos of these locations are also provided in the BUOW report. A small amount of matted vegetation was observed at one road culvert location (C4), but this was not considered specific to kit fox and was likely caused by roadside water flowing through the culvert. Details on all culverts and pipes are shown in Table 7.

Table 7: San Joaquin Kit Fox Habitat Assessment

Culvert or Pipe Number	Dimensions (inches)	Number of Culverts or Pipes	Sign Observed	Size Suitable for Kit Fox	Adjacent to Existing Road	Notes
C1	12.5 x 27	One culvert.	No	✓	✓	None.
C2	22 x 24	One culvert.	No	✓	✓	None.
C3	84 x 36	Three adjacent culverts of same dimensions.	No	✓	✓	None.
C4	30 x 23	Two adjacent culverts of same dimensions.	Matted vegetation, likely caused by flow of roadside water.	✓	✓	None.
C5	7 x 16	One culvert, one side mostly filled with sediment.	No	✓	✓	None.
C6	24 x 24	One culvert.	No	✓	✓	None.
C7	20 x 20	One culvert.	No	✓	✓	None.
C8	16 x 13	One culvert.	No	✓	✓	None.
C9	23 x 23	Four adjacent culverts of same dimensions.	No	✓	✓	None.
C10	28 x 20	Two adjacent culverts of same dimensions.	No	✓	✓	None.
P1	Various Sizes	Sedentary pile of pipes.	No	✓	✓	None.
P2	10 x 10	One pipe.	No	✓	✓	None.
P3	10 x 10	One pipe.	No	✓	✓	Elevated over one foot above the ground and not suitable for kit fox.
P4	10 x 10	One pipe.	No	✓	✓	Elevated over one foot above the ground and not suitable for kit fox.

Culvert or Pipe Number	Dimensions (inches)	Number of Culverts or Pipes	Sign Observed	Size Suitable for Kit Fox	Adjacent to Existing Road	Notes
P5	8 x 10	One pipe.	No	✓	✓	None.

6.0 CONCLUSIONS AND RECOMMENDATIONS

The results of the surveys have been used to develop recommendations for pre-construction surveys and avoidance and minimization measures. The recommendations within this report are preliminary and will be refined during the California Environmental Quality Act (CEQA) process as more details about the Project design and schedule are determined.

Use of heavy machinery and significant ground disturbance during construction activities have the potential to impact special-status plants, BUOW, Swainson’s hawk, raptors and other nesting birds, San Joaquin kit fox, American badger, or other special-status species, if present. With implementation of the measures recommended below, impacts to biological resources, including special-status species, are anticipated to be less than significant with mitigation incorporated. If habitat for special-status species can be avoided during finalization and implementation of the Project, this could reduce the requirements. The culverts and pipes found at the Project site are unlikely to be impacted by ground disturbance because they are located on the boundary of the site along existing roads. However, construction activities are planned directly adjacent to these locations and noise during construction may disturb special-status species if present in the culverts or pipes, including the BUOW, San Joaquin kit fox, and American badger. Special-status species and habitats at the site are summarized in Table 8.

Table 8: Special-status Species and Habitat Summary

Scientific Name	Common Name	Federal Status	State Status/ Other Status	Summary
<i>Atriplex coronata</i> var. <i>coronata</i>	crownscale	None	CNPS Rank 4.2	One population of crownscale was found within the Project site and was estimated at over 5,000 individuals (Figure 6). During the winter season BUOW surveys, the crownscale population was observed to be tilled.
<i>Athene cunicularia</i>	burrowing owl	None	SSC	BUOW was not observed during the protocol-level survey. Potential burrow surrogates (culverts and pipes) were found on the Project site boundary along existing roads. No suitable burrows were found in soils within the Project site. During the winter season surveys, cast pellets were observed at two pipes, indicating BUOW are likely to be using these surrogate burrows.
<i>Buteo swainsoni</i>	Swainson's hawk	None	Threatened	Three active Swainson’s hawk nests were found within 1-mile of the Project site, one of which was on the site boundary (Figure 8). Numerous individuals were also observed in the vicinity of the Project site (Figures 7 and 8). Swainson’s hawk could nest within the Project site (on power poles and towers), nest off-site nearby (in trees), and forage within the site.
<i>Circus hudsonius</i>	northern harrier	None	SSC	An individual northern harrier was observed flying over the Project site but no nests of this species were found (Figure 7). This species is unlikely to nest within or near the site.
<i>Eremophila alpestris actia</i>	California horned lark	None	WL	One active horned lark nest was found on the ground within the Project site (Figure 7).

Scientific Name	Common Name	Federal Status	State Status/ Other Status	Summary
<i>Lanius ludovicianus</i>	loggerhead shrike	None	SSC	Loggerhead shrikes were observed perched within and near Project the site on fences and powerlines but no nests were found. This species is unlikely to nest within the Project site but could nest in trees or shrubs on the boundary of the site.
Native raptor and bird nests		Migratory Bird Treaty Act	Migratory Bird Protection Act	Active nests of great horned owl, common raven, and red-tailed hawk were found on the boundary and within 1-mile of the Project site (Figure 8).
<i>Taxidea taxus</i>	American badger	None	SSC	American badger was not observed at the site and no potentially suitable burrows in soils within the Project site were found. Culverts of sufficient size, which were found on the site boundary along existing roads, are sometimes used by this species for refuge or to pass safely beneath roads.
<i>Vulpes macrotis mutica</i>	San Joaquin kit fox	Endangered	Threatened	San Joaquin kit fox was not observed at the site and no potentially suitable burrows in soils within the Project site were found. Culverts and pipes of sufficient size, which were found on the site boundary along existing roads, could potentially be used by this species for denning.

Notes: SSC = CDFW Species of Special Concern; WL = CDFW Watch List.

One rare plant species, crownscale (CNPS Rank 4.2), was found within the Project site during the spring 2020 surveys; however, during the January 2021 surveys, the entire population was observed to be tilled by the current landowner, Westlands Water District. CNPS Rank 4.2 applies to species that are of limited distribution or infrequent throughout a broad area in California, and moderately threatened in the state (20 to 80 percent of occurrences threatened). If the crownscale population returns from its seed bank after tilling, it is recommended that this population be avoided during Project activities and protection measures be implemented. While crownscale is not federally or state listed, impacts to this species will need to be evaluated in the CEQA document and mitigation measures would be required, if it is present on site. Consultations with the USFWS or CDFW are not required for this species. The following mitigation measures are recommended:

- If crownscale populations are located outside of the project footprint, a qualified biologist shall flag an appropriate avoidance zone to completely avoid impacts to any crownscale individuals.
- If crownscale populations cannot be avoided, a qualified biologist shall prepare a seed collection and replanting plan to reduce impacts to the identified special-status plant populations. Temporary impacts (impacts in areas that would be restored to natural conditions) may be mitigated by salvaging the first 6 inches of topsoil during ground disturbance, storing on site and protecting the soil from weed seed dispersal, and then returning the soil horizon to its original profile to keep seeds at the appropriate soil depth. Permanent impacts (impacts in areas that would not be restored to natural conditions) may be mitigated by enhancing other crownscale habitat within or outside the Project site. Topsoil would not be salvaged in the case of permanent impacts, and other habitat enhancement methods would be used, such as seed collection and propagation, in other non-impacted locations.

Impacts to BUOW during construction activities can be avoided through pre-construction surveys, and if found, the establishment of temporary no-work buffer zones. Recommendations for BUOW are described in the BUOW survey report.

Raptors and other nesting birds have the potential to nest at the Project site. Therefore, the following measure is recommended for these species:

- Avoid ground-disturbing and vegetation removal activities during the nesting bird season (February 1 to September 15). If these activities must occur during the nesting season, a pre-construction nesting bird survey will be conducted by a qualified biologist on and within 500 feet of the construction area, access permitting. The survey will be conducted no more than 14 days prior to initiation of these activities and repeated between delays of greater than 14 days during the nesting season.
- If an active nest is found, a minimum no-disturbance buffer of 50 feet around active nests of non-listed bird species and a 200-foot no-disturbance buffer around active nests of non-listed raptors species will be flagged around the nest (this distance may be modified by the qualified biologist based on the bird species found). No ground-disturbing or vegetation removal activities will occur within the buffer until the nesting season has ended or the nest is vacated, and juveniles have fledged, as determined by the qualified biologist. At the discretion of a qualified biologist, smaller buffer sizes may be recommended or encroachment into the buffer may occur.

Swainson's hawk has the potential to nest at the Project site. Potential impacts to Swainson's hawk, including potential loss of foraging habitat, are addressed in the *Analysis of Impacts to Swainson's Hawk Nesting and Foraging Habitat* (HELIX Environmental Planning, Inc. 2020). Recommendations for Swainson's hawk are described in this report.

San Joaquin kit fox has the potential to occur at the Project site. Therefore, the following measure is recommended for this species:

- A qualified biologist will conduct a pre-construction den survey for San Joaquin kit fox no less than 14 days and no more than 30 days prior to any ground disturbance and/or construction activities in accordance with the *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox Prior to or During Ground Disturbance* (USFWS 2011). The survey will be conducted within the construction area. The survey will search for dens to ensure that San Joaquin kit fox are not present. If it is determined that the construction area is unsuitable for denning due to recent disking/tilling, then the survey is not required.
- If an active San Joaquin kit fox den is observed within the construction area, the CDFW and USFWS will be contacted prior to ground-disturbing activities within 200 feet of the den to determine the proper course of action. If San Joaquin kit fox activity is not detected, a memorandum will be submitted to CDFW and USFWS within five days after the completion of the pre-construction survey and prior to the start of ground disturbance and/or construction activities. In addition, appropriate USFWS construction and on-going operational requirements from the *Standardized Recommendations for Protection of the Endangered San Joaquin Kit Fox Prior to or During Ground Disturbance* (USFWS 2011) will be implemented.

The following measure for American badger is recommended:

- If a burrow/den that could support American badger (measuring 8 to 12 inches wide and 6 to 10 inches long) is found during the pre-construction surveys for burrowing owl or San Joaquin kit fox, a minimum buffer of 100 feet will be established around the burrow/den. No construction work will occur within this buffer unless a qualified biologist determines that the burrow/den is not occupied.

The following measure for education of on-site construction workers regarding special-status species is recommended:

- Within 30 days prior to construction, all on-site construction workers will attend a training for special-status species. The training will be conducted by a qualified biologist and will include life history information, mitigation measures, and known locations or habitats on the site for special-status species. At a minimum, the training will include the following species: crownscale, burrowing owl, Swainson's hawk, American badger, San Joaquin kit fox, and nesting raptors and other birds.

Subject: Luna Valley Solar Project, Fresno County – Analysis of Impacts to Swainson’s Hawk Nesting and Foraging Habitat

Dear Ms. Joshi:

HELIX Environmental Planning, Inc. (HELIX) has prepared this letter report on behalf of Luna Valley Solar I, LLC, a wholly-owned subsidiary of Clearway Energy Group (Clearway), to present an analysis of the potential impacts of the proposed Luna Valley Solar Project (Project) on Swainson’s hawk (SWHA; *Buteo swainsoni*), which is listed as threatened under the California Endangered Species Act (CESA), and to provide the Lead Agency and responsible agencies with information necessary to make findings pursuant to the requirements of the California Environmental Quality Act (CEQA). The proposed project is located in unincorporated western Fresno County, and Clearway is seeking an Unclassified Conditional Use Permit from Fresno County (County).

The analysis provided in this letter report identifies potential project impacts to SWHA based on an approach that has been used in Fresno and Kings counties (Estep 2011, 2016; HELIX 2018a) to support approved CEQA documents, which has been further refined to provide additional analytical rigor. The methodological approach combines field observations, public and proprietary data, and a desktop spatial analysis to estimate the acreage of suitable foraging habitat required to sustain the regional population of SWHA. Impacts to foraging habitat are assessed at both the project and cumulative levels. Potential impacts to nesting SWHA from the proposed project are also discussed.

Project Location

The Project site is an approximately 1,300-acre site located in unincorporated Fresno County and generally bound by flat, agricultural lands and other solar energy generation facilities. The nearest city to the proposed project is Tranquillity, approximately 9 miles to the east-northeast. Interstate 5, paralleled to the east by the California Aqueduct, is approximately 11 miles to the west as well as to the south of Project site. The cities of Mendota and San Joaquin are approximately 10 miles north and east of Project site, respectively. The San Joaquin Airport is roughly 9.5 miles east of the Project site.

More specifically, Highway 33 (South Derrick Avenue) makes up the eastern boundary of the Project site. The western edge of the Project site is approximately 2,600 ft. (feet) east of S. Bernardino Avenue, the northern edge is approximately 1,400 ft. south of W. South Avenue, and the southern edge is approximately 1,300 ft. north of W. Dinuba Avenue. W. Manning Avenue cuts through the approximate middle of the Project site from east to west and S. Ohio Avenue cuts through the approximate middle of the Project site from north to south.

The Project site is entirely within the U.S. Geological Survey 7.5-minute topographic quadrangle of "Levis, CA." The Project site is located within Township 15 South, Range 14 East, Sections 23, 24, 25, and 26. The Project site centroid is located at approximately latitude/longitude 36.603333, -120.401389.

Site History

The Project is located on lands owned by Westlands Water District (Westlands). Westlands acquired this property as part of the September 3, 2002 settlement agreement reached among the United States, Westlands, and others in the Sumner Peck Ranch et al. v. Bureau of Reclamation et al. lawsuit.

The Project site is located in an area of agricultural land use and identified as Farmland of Local Importance on the State Important Farmlands maps. The site has historically been used for dry-farmed (non-irrigated) agriculture (low-yield production of winter wheat and oats) and has been used for this purpose for the last 10 years. During years in which rainfall is insufficient to produce crops, the land is grazed as rangeland grasses. Currently, some portions of the Project site lie fallow while the majority of the area is used to grow non-native grasses and forbs, such as mustard and alfalfa. None of the land within the Project site is covered by a Williamson Act Contract.

Summary of the Proposed Project

Overview

The applicant (Luna Valley Solar I, LLC) proposes to construct and operate a photovoltaic (PV) solar electricity generating facility and energy storage system (ESS) and associated infrastructure that would produce up to 200 megawatts (MW) of alternating current (AC) energy at the point of electrical grid interconnection on approximately 1,300 acres of privately owned agricultural land in western Fresno County. The substation would connect to the regional electrical grid at the Pacific Gas and Electric Company's (PG&E) 230 kilovolt (kV) Tranquillity Switching Station located west of State Route 33 and south of Manning Avenue. The Project would include the construction of solar arrays, an electrical substation and connection to the PG&E-owned Tranquillity substation, an energy storage system and other necessary infrastructure including an operation and maintenance (O&M) building, septic system and leach field, a supervisory control and data acquisition (SCADA) system, a meteorological data system, buried conduit for electrical wires, overhead collector lines, on-site access roads and security fencing. Select components of the project description pertinent to the SWHA analysis are included below.

Photovoltaic Modules and Support Structures

Solar PV generating facilities consist of individual solar panels (modules) which are arranged in rows to form solar arrays. The arrays are combined to form larger units called solar blocks or array blocks. For

large-scale utility applications, hundreds of array blocks are interconnected as part of the solar power generation facility. Each array block is served by an electrical inverter, which can be located centrally within the array block or distributed within the array footprint. The inverters convert the direct current (DC) output from the array to AC which is then conveyed to the substation and switchyard which steps up the voltage to match the collection system.

Solar arrays are linear (approximately 300 feet long) rows of solar PV modules mounted on round shafts (torque tubes) that rotate to orient the modules east-west through the course of the day. The long axis of a tracker is oriented north-south. The torque tubes are supported approximately 5 feet above grade on steel posts, leaving a soil substrate underneath the trackers. At maximum tilt, the top edge of the modules on a tracker is approximately 12 feet above grade. Within an array block, trackers are spaced approximately 15-25 feet on center (from post to post) to accommodate maintenance personnel, reduce shading by neighboring modules at maximum tilt in the morning and evening when sun angle is low, and to accommodate design parameters that meet applicable Fresno County fire safety requirements. When trackers are horizontal, the spacing between the edges of adjacent rows of modules is approximately 12 feet; this increases to slightly more than 14 feet at maximum tilt. This geometry results in a maximum of 40 percent of the area within a typical array block consisting of solar PV panel surface and often 30 percent or less when viewed from above, and the other 60+ percent remaining visible ground surface.

Construction

Construction of the proposed project could take place in two major stages. The first stage would include site preparation, grading, and preparing staging areas and on-site access routes, and the second stage would involve assembling the trackers and constructing electrical interconnection facilities. Construction is slated to begin in mid-2022 and is expected to continue for up to 16 months, with the facility becoming operational in 2023.

Construction activities would take place primarily during daylight hours, approximately 6 am to 9 pm, and would be continuous unless prevented by rain. Construction would include establishment of access roads with dirt or decomposed granite surfaces, trenching for underground collection lines, boring for posts to support solar arrays, installation of posts and solar arrays, construction of inverters, and an electrical substation consisting of above-ground facilities mounted on concrete pads, and installation of an energy storage system (an above-ground facility mounted on concrete pads). Equipment used would be standard construction equipment such as excavators, loaders, graders, cranes, forklifts, container trucks, and water trucks. Grubbing and grading would occur on the site to achieve the required surface conditions. Because the site is already mostly flat, grading would be minimal. The site's cut and fill would balance, and no importation or exportation of materials would be necessary. The site drainage is designed to follow the natural drainage pattern, and none of the on-site facilities, including fences and panel posts, should prevent stormwater flow. No on-site detention facilities are planned.

Impact Area

The total project footprint is approximately 1,300 acres. Access roads, concrete equipment pads (inverters/transformers), batteries, buildings (substation and operations and maintenance building), and storage unit(s) would total up to approximately 90 acres of impervious surfaces in the facility (approximately 0.7 percent of the site), depending on the final design of the project.

The solar array blocks (PV modules) would cover approximately 305 acres from an aerial perspective when fully horizontal (parallel to the ground); however, it is noteworthy that the ground under the 305 acres of PV module surface would be undeveloped soil substrate. Therefore, a total of 395 acres out of the 1,300 would be covered at a maximum (when PV modules are fully horizontal); the remaining 895 acres would be undeveloped.

Swainson's Hawk Use of the Project Site

Tetra Tech performed focused SWHA nest surveys at the proposed Project site on behalf of Clearway Energy each month between April and July 2020. Biologists assessed the proposed project site and a 1-mile buffer around the Project by vehicle for suitable raptor habitat. The surveys occurred between sunrise to 12:00 pm or 4:30 pm to sunset. Biologists used binoculars to survey potential trees or other features (e.g., power poles) that could be used for raptor nesting. Visual surveys for nests and perched raptors were performed. Notes were recorded on any raptor observations (e.g., species, number of individuals observed, behavior), and any active raptor nests were mapped. No SWHA nests were found on the project site. However, two SWHA nests were found within a one-mile radius of the project site: one at the southern site boundary along Dinuba Ave. and one in the northern portion of the survey area along Hwy 33 near the one-mile radius limit of the search area.

METHODS

Regulatory Guidance

The California Department of Fish and Wildlife (CDFW) has developed regional strategies to address land use issues related to SWHA conservation pursuant to both CESA and the CEQA process. The CDFW Region 2 guidelines (CDFW 1994) are often used during CEQA review of proposed projects in the Central Valley. The guidelines outline methods for conducting nest surveys and avoiding or minimizing impacts to active nests that may result in nest abandonment or otherwise cause injury or mortality to individual SWHA (i.e., "take"), which would be regulated under CESA. To avoid impacts to nesting SWHA, the guidelines recommend that no intensive new disturbances or other project-related activities that may cause nest abandonment or forced fledging should be initiated within 0.25-mile of an active nest between March 1 and September 15. The exclusion buffer may be extended to 0.5-mile in nesting areas away from urban development, where intensive disturbance is not a normal occurrence during nesting season. Examples of intensive disturbance cited in the guidelines include heavy equipment associated with construction, use of cranes and draglines, and rock crushing activities (CDFW 1994).

The guidelines also recommend acquisition of replacement lands (i.e., compensatory mitigation) for projects that would result in the loss of foraging habitat acreage sufficient to be considered a significant impact to the SWHA population pursuant to CEQA definitions. The guidelines state that the determining criteria for CEQA significance is removal of any suitable foraging habitat within 10 miles of an active SWHA nest, which is defined as a nest active at any time in the previous 5 years. Compensatory mitigation is recommended at ratios ranging from 1:1 for projects within 1-mile of an active nest, 0.75:1 for projects 1-5 miles from an active nest, to 0.5:1 for projects 5-10 miles from an active nest (CDFW 1994). The guidelines do not consider the size of the potentially affected population, the amount and quality of existing foraging habitat, or the size of the project relative to the amount of available foraging habitat. However, the guidelines allow for independent assessment of impacts and development of a conservation strategy as an alternative to the guidelines. In order to more accurately assess the

potential impacts of the proposed project to SWHA, this study was undertaken to quantify the effects of the proposed project on the regional population of SWHA by analyzing data on land use, nest distribution and abundance, and to inform a CEQA significance determination based on a more robust biological rationale.

Methodology

Impacts to SWHA Nests

The potential for the Project to result in disturbance to SWHA nests is restricted to potential indirect impacts to active nests outside of the project site, as there are no trees or other features that could be used for nesting inside the project site boundary. Project construction activities could create disturbances to nesting SWHA through noise, vibration, night lighting, or human presence leading to nest abandonment and mortality of chicks. The study included an analysis of the potential for project-related activities to meet the standard of intensive disturbance provided in the guidelines, and an assessment of the appropriate exclusion buffer distance.

Impacts to SWHA Foraging

The analysis of potential impacts of the Luna Valley Solar project on foraging habitat for the regional population of SWHA builds upon methods that have been used for the analysis of impacts to SWHA foraging habitat on several other approved utility-scale solar projects in the region (reviewed in Estep 2017). This method more effectively addresses CEQA-based cumulative impacts to SWHA than the approach employed in the CDFW guidelines. In order to provide a more robust assessment of CEQA impacts, it is necessary to extend the analysis beyond the scale of the project site and the nearest active SWHA nest, which is the scale of analysis employed in the CDFW guidelines. The larger-scale analysis should consider the size and distribution of the regional population of SWHA, availability of suitable foraging habitat, and the effect of project implementation on the availability of resources to the regional population.

Regional Population and Study Area

For purposes of this analysis, the regional population of SWHA was defined as the number of nesting territories documented within 10 miles of the project site. The 10-mile radius standard was chosen based on telemetry studies that indicate SWHA will fly up to 10 miles from the nest to forage (Babcock 1995, Estep 1989). Consequently, the regional population for the study is equivalent to the SWHA that may potentially forage on the project site and thus be directly affected by the project through loss of foraging habitat. The minimum 10-mile radius around the project site boundary, smoothed to account for the uneven shape of the project site, also defines the study area for the analysis.

Foraging Habitat Availability

The amount, distribution, and quality of foraging habitat available to the regional population is a function of surrounding land use patterns. Historically, SWHA hunted in the grasslands of the Central Valley and coastal valleys, and the desert scrub and shrub lands of high desert regions. With the conversion of the Central Valley to agriculture, SWHA foraging has shifted to managed cultivated lands and the availability of foraging habitat is now largely dependent on agricultural practices (Babcock 1995,

Woodbridge 1991, Estep 1989). The suitability of individual land cover types is largely a function of two factors: 1) prey abundance; and 2) prey accessibility, which is influenced by vegetation structure (Estep 2009, Bechard 1982). Land uses considered suitable for SWHA foraging include: alfalfa hay; irrigated cropland typically cultivated in a rotation of cotton, wheat, and tomatoes, but also including silage crops such as triticale, sorghum, and corn; irrigated pasture; and uncultivated land that has retained some natural soil and vegetation (Estep 2017). Land uses historically considered unsuitable for SWHA foraging include developed land; orchards and vineyards; solar facilities; and open water (Estep 2017).

Suitable foraging habitat varies in quality also based on agricultural management. Crop types that support large numbers of rodent prey and consistently have a low, open vegetation structure provide the highest quality habitat, while crop types that support low numbers of prey or are characterized by tall and dense vegetation provide the lowest quality foraging habitat. Foraging studies indicate that SWHA preferentially forage in alfalfa, tomato, wheat, oat, and other annually rotated crops that maintain a relatively low vegetation profile and that are harvested during the breeding season. Alfalfa has been shown to provide particularly high value habitat due to its consistently low vegetation height and high frequency of mowing, and is used by SWHA at a significantly higher rate relative to its availability in the landscape (Estep 2013, 2009, 1989; Swolgaard et al. 2008; Babcock 1995; Bechard 1982). Other grain crops (e.g., wheat, barley, sorghum), along with row crops (e.g., tomatoes, sugar beets) and irrigated pasture provide moderate value habitat, as they are harvested during the breeding season. Crops such as corn, cotton, safflower, melons, and vegetables provide low value habitat (Estep 2015).

Based on the factors discussed above, it is possible to categorize landscape-scale data on land use as suitable/unsuitable for SWHA foraging, and as High/Moderate/Low quality foraging habitat.

Foraging Habitat Requirements

Although SWHA do not defend a territory beyond the immediate vicinity of the nest, SWHA forage widely over a large area (Estep 2015). Data from two telemetry studies conducted in the Sacramento Valley indicate that SWHA home ranges vary from 830 acres to 21,543 acres (Estep 1989, Babcock 1995). The average home range size from Babcock (1995) was 9,978 acres (N=5) and from Estep (1989) was 6,820 acres (N=12). Smaller home ranges generally consist of high percentages of alfalfa, fallow fields, and dry pastures (Babcock 1995, Woodbridge 1991, Estep 1989). Where nests are located in the immediate vicinity of high value foraging habitat, home range sizes are as low as 830 acres (Estep 2015). This study used the average home range size of 6,820 acres from Estep (1989) for analysis purposes because it represents a reasonable estimate of home range size and is supported by field research.

It is important to note that home range and foraging territory are not synonymous. The 6,820-acre home range is the average area that an individual hawk will occupy during the course of the breeding season; however, within this area, foraging occurs opportunistically where conditions provide accessible prey (Estep 2015). Furthermore, this area is not defended and SWHA often forage communally (Estep 1989, personal observation by the author¹). Although average home range size may not be an accurate indicator of realized foraging habitat acreage, it is not feasible to precisely quantify the foraging

¹ Author observed 30 SWHA foraging in a wheat field immediately north of SR-198 in Kings County during harvest in July 2017.

area used by individuals of wide-ranging, opportunistic species such as SWHA; therefore, the average home range size is a useful baseline that can be adjusted to account for factors that affect the amount of the home range that provides the essential resource base for the SWHA nesting territory and thus determines the amount of habitat required to sustain a nesting pair (Estep 2015). These factors include:

Factor One – Home range overlap. Home ranges within a population overlap, as SWHA forage opportunistically over a shared landscape and often gather in large numbers to forage during agricultural activities that expose prey such as harvest, disking, burning, or flooding. Estep (1989) found that average overlap among home ranges within a population was 40 percent. Adjusting the average home range size downward by the average amount of overlap partially accounts for the extent to which SWHA in a population share the available foraging habitat in the region.

Factor Two – Habitat suitability. While SWHA utilize a large home range, actual foraging takes place in a subset of the total home range, and most prey capture attempts are in moderate- or high-quality habitat areas (Estep 2015). Most SWHA home ranges are likely to contain some unsuitable and low-quality suitable land uses that do not contribute appreciably to the resource base available in the home range. In order to account for this, the average home range can be adjusted downward to reflect only the proportion of the suitable foraging habitat in the study area that is of Moderate or High quality (Estep 2015).

Factor Three – Foraging outside the study area. Because SWHA utilize land up to 10 miles from the nest for foraging, some portion of the potential foraging habitat available to a nesting pair in the regional population will be outside the study area, unless the nest is inside the project site boundary. If there are no trees or other suitable nesting structures in the project site, no nest in the regional population will have a potential foraging area entirely inside the study area. Comparing only the habitat available inside the study area to the total habitat requirements of the regional population would substantially underestimate the amount of habitat available to the regional population.

The amount of overlap between the study area and the potential foraging territory of a nest will decrease with distance from the project site. This relationship can be represented in a simplified manner with Equation 1, which is a trigonometric formula for the overlap (A) between two circles of unit radius (radius=1):

$$A = 2 \cos^{-1} \left(\frac{d}{2} \right) - \frac{d}{2} \sqrt{4 - d^2}$$

where d=distance between the centers of the circles expressed as a proportion of the radius, and r=1. Although the study area is not a perfect circle, this is a suitable approximation of the amount of a given nest's potential foraging area as a function of its distance from the project site, as the study area is approximately a circle of radius 10 miles centered on the project site, and the potential foraging area available to a nesting pair of SWHA is a circle of radius 10 miles centered on the nest.

After applying this equation to each nest location in the regional population and calculating the weighted average overlap of all nests, the total amount of foraging habitat required by the regional population can be adjusted to reflect the average proportion of all home ranges that is outside the study area. For this analysis, nest distances from the project site were binned in increments of 1 mile, and the value of d for each bin was the mid-point of the distance increment (e.g. all nests between 2 and 3 miles

from the project site boundary were given a value of 2.5). For example, for a nest that is between 2 and 3 miles from the center of the project site the quantity d is calculated as 0.25 (2.5 miles divided by the 10-mile radius of the circle to get a value of 0.25).

Using all of the information discussed above, the acreage of suitable foraging habitat required in the study area to support the regional population of SWHA (Y) can be calculated using Equation 2:

$$Y = n \cdot 6,820 \cdot p \cdot q \cdot r$$

where n is the number of SWHA nesting pairs in the regional population; 6,820 is the baseline average home range size; p is the adjustment for average home range overlap (1-average overlap); q is the proportion of the suitable habitat in the study area that is moderate- or high-quality habitat; and r is the weighted average overlap between the study area and the potential foraging area available to the regional population. The quantity Y can be subtracted from the total existing acreage of suitable foraging habitat in the study area; a positive result would indicate that there is a surplus of foraging habitat available to SWHA in the study area; a negative result would indicate that there is a deficit of foraging habitat in the study area.

Thresholds of Significance

CEQA defines the significance of an impact on a state-listed species based on the following relevant thresholds of significance:

- Appendix G of the State CEQA guidelines states that a biological resource impact is considered significant (before considering offsetting mitigation measures) if the lead agency determines that project implementation would result in “substantial adverse effects, either directly or through habitat modifications, on any species identified as being a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS”; and
- CEQA Section 15065 (Mandatory Findings of Significance) states that a biological resource impact is considered significant if the project has the potential to “substantially reduce the number or restrict the range of an endangered, rare or threatened species”.
- Both these thresholds are understood to mean something other than “take” of a single member of a species.

Impacts to SWHA Nests

Any impact from project activities that results in abandonment or forced fledging of active nests so as to cause population-based impacts to a listed species or which would result in the substantial reduction in the numbers or range of the SWHA as a species would be considered a significant impact under CEQA.

Impacts to SWHA Foraging

Based on the above-referenced definitions, the proposed project could be considered to have a potentially significant impact to SWHA if it resulted in a reduction of available foraging habitat below the amount required to sustain the regional population. If the proposed project would not result in a deficit

of suitable foraging habitat in the study area, the project's impact could be considered less than significant under CEQA.

Because SWHA home ranges are different each year due to seasonal and annual changes in the crop matrix, it is difficult to predict or model the extent of the area likely to be used by a given pair of SWHA over a period of years (Estep 2015). In addition, although the method used to estimate the acreage of available and required foraging habitat in the study area represents a robust and scientifically defensible analysis, it is necessarily dependent on a number of generalizations and assumptions. Therefore, the estimates in the study are only best approximations. In order to account for variation in the estimates due to interannual variation in the regional population caused by mortality and recruitment, allow for resilience in the population to environmental factors outside the scope of this analysis, and to account for other potential sources of error, the CEQA significance threshold should be set substantially higher than the minimum amount of foraging habitat required in the study area to sustain the regional population. For this analysis, the CEQA significance threshold was conservatively set at 70 percent of the existing surplus habitat. If the project would result in the surplus of suitable foraging habitat in the study area being reduced to less than 70 percent of the existing surplus, the project would be considered to have a significant impact on the regional population of SWHA under CEQA. This 70% threshold has been established by Estep as being adequate to provide a buffer of foraging habitat above the minimum number of acres needed (Estep 2015) and has been accepted by numerous CEQA lead agencies.

Data Acquisition and Processing

Data used in the analysis came from publicly available datasets as well as data obtained during surveys performed by HELIX under contract with Clearway. All public data sets were the most recent available as of June 2020.

Land Use Data

Land use data were taken from the 2019 U.S. Department of Agriculture (USDA) Crop Layer, which is available at: https://www.nass.usda.gov/Research_and_Science/Cropland/Release/index.php. The data were downloaded on June 26, 2020. The data set provides land cover data at a resolution of 30m x 30m for the entire U.S. The data were clipped to the study area boundary, and land cover types were characterized as suitable or unsuitable for SWHA foraging, and as High, Moderate, Low, or Unsuitable quality foraging habitat, according to a crosswalk derived from previous studies (Estep 2017, 2015). The crosswalk is provided in Attachment B. Land cover data were adjusted for existing solar projects that were classified as their former agricultural use in the USDA data set, which resulted in a minor increase in the acreage of unsuitable foraging habitat as compared to what would be calculated only using the USDA Crop Layer data.

This method was used in similar studies performed in late 2016 for the RE Mustang Two Solar Project approved by Kings County in December 2017 and in 2018 for the RE Scarlet solar project currently under review by Fresno County (HELIX, unpublished data). In the 2016 study, the USDA Crop Layer (2015 data were available at that time) was converted to suitable/unsuitable classifications and compared to data collected in 2016 in a ground survey of land covers in a 252,225-acre study area around the RE Mustang Two project site (Estep 2017). The acreage of suitable foraging habitat calculated by HELIX differed from the acreage identified by Estep (2017) by -6,331 acres (-3.1 percent), which suggests that the desktop

analysis provides a reliable and conservative indicator of the amount of suitable foraging habitat at a landscape scale.

Swainson's Hawk Nest Data

Spatially explicit data on SWHA nest locations in the study area were obtained from the following public sources: a comprehensive ground survey performed in 2011 for the Tranquillity Solar project that is immediately adjacent to the Luna Valley Solar project (to the south) for all SWHA nesting pairs within a 10-mile radius of the Tranquillity Solar project site (Estep 2011), a comprehensive ground survey of SWHA nests in the central San Joaquin Valley that includes the project site (Estep and Dinsdale 2012), a comprehensive ground survey performed in 2016 for the adjacent Scarlet Solar project (to the east) that included a survey for all SWHA nesting pairs within a 10-mile radius of the Scarlet Solar project site (Estep 2016), SWHA protocol surveys within a 1-mile radius of the project site conducted in spring/summer 2020 by Tetra Tech under contract with Clearway (Tetra Tech, in prep), SWHA protocol surveys within a 0.5-mile radius of the Scarlet Solar project site conducted by HELIX in 2018, and California Natural Diversity Database (CNDDDB) records.

Reconnaissance Surveys

HELIX biologists conducted reconnaissance surveys to ground truth the land cover data and SWHA nest data obtained during the desktop review as discussed above. HELIX wildlife biologists Patrick Martin and Stephanie McLaughlin, M.S. conducted a reconnaissance survey of the study area from June 30 to July 2, 2020. The reconnaissance survey included driving on public roads and other public accessible areas and noting land cover types as well as accessing all of the reported SWHA nests within the study area to determine whether the nest/nest tree appeared to be present and suitable for use by SWHA.

Cumulative Projects

Data on other existing, planned, and reasonably foreseeable solar projects (cumulative projects) in the study area were obtained from Fresno County. Cumulative projects were classified as Constructed/Not Constructed for purposes of analysis.

RESULTS

Swainson's Hawk

SWHA was state listed as a California threatened species on April 17, 1983. This species has no federal listing status.

SWHA is an uncommon breeding resident and migrant in the Central Valley, Klamath Basin, Northeastern Plateau, Lassen County, and the Mojave Desert. There has been very limited SWHA breeding reported from Lanfair Valley, Owens Valley, Fish Lake Valley, Antelope Valley, and in eastern San Luis Obispo County. SWHA breeds in stands with few trees in juniper-sage flats, riparian areas, and in oak savannah in the Central Valley and forages in adjacent grasslands or suitable grain or alfalfa fields, or livestock pastures. SWHAs breed in California and winter in Argentina, Mexico, and South America. SWHAs usually arrive in the Central Valley between March 1 and April 1 and migrate south between September and October. SWHAs usually nest in trees adjacent to suitable foraging habitat. SWHA nests

are usually located in trees near the edges of riparian stands, in lone trees or groves of trees in agricultural fields, and in mature roadside trees. Valley oak, Fremont cottonwood, walnut, and large willow with an average height of about 58 feet, and ranging from 41 to 82 feet, are the most commonly used nest trees in the Central Valley. Suitable foraging areas for SWHA include native grasslands or lightly grazed pastures, alfalfa and other hay crops, idle land, certain grain and row croplands, and ruderal lands. SWHAs primarily feed on voles; however, they will feed on a variety of prey including small mammals, birds, and insects.

Regional Population and Habitat Requirements

The regional population of SWHA that would potentially be directly or indirectly affected by the Luna Valley Solar project is 32 nesting pairs in a 240,143-acre study area. The nest locations are concentrated in the northern half of the study area and specifically in the northeastern quadrant (Figure 1). A total of 140,305 acres of suitable foraging habitat were identified in the study area; the remaining 99,838 acres contained unsuitable land uses for foraging (Figure 2). Of the suitable foraging habitat in the study area, 3,339 acres were High quality (alfalfa), 125,035 acres were Moderate quality, and 11,931 acres were Low quality (Figure 3). Overall, 91.5 percent of the suitable foraging habitat was Moderate- or High-quality habitat. Figures are in Attachment A. Land uses in the study area are summarized in Table 1.

Table 1
SWHA FORAGING HABITAT IN THE STUDY AREA

Habitat Type	Area (ac)	% of Total
Grand Total	240,143	100.0
Suitable Habitat	140,305	58.4
High Quality (alfalfa)	3,339	2.4
Moderate Quality	125,035	89.1
Low Quality	11,931	8.5
Unsuitable Habitat	99,838	41.6

Most nests (78 percent) were more than 4 miles from the project site boundary (Figure 4), and the largest concentration of nests (9 nests) was 8-9 miles from the project site. The approximate overlap of the potential foraging area and the study area was calculated for each nest using Equation 1. The weighted average overlap of all nests with the study area was 0.61 (Table 2).

Table 2
PROPORTION OF POTENTIAL FORAGING AREA INSIDE THE STUDY AREA

Distance Increment (mi)	Number of Nests	Overlap
0-1	2	0.968
1-2	2	0.905
2-3	3	0.841
3-4	1	0.778
4-5	2	0.716
5-6	4	0.654
6-7	1	0.594
7-8	2	0.534

8-9	9	0.476
9-10	6	0.419
Weighted Average		0.611

Using the results discussed above, the total acreage of foraging habitat required in the study area to sustain the regional population of SWHA was calculated using Equation 2:

$$Y = 32 \cdot 6,820 \cdot 0.6 \cdot 0.91 \cdot 0.61 = 72,687$$

Where 32 is the size of the regional population (n); 6,820 is the baseline average home range size; 0.6 is the correction for 40 percent overlap among home ranges (p); 0.91 is the proportion of the suitable foraging habitat in the study area that is Moderate- or High-quality (q); and 0.61 is the weighted average proportion of potential foraging area for all nest territories in the regional population that is inside the study area (r).

According to Equation 2, the total amount of foraging habitat in the study area required by the regional SWHA population is 72,687 acres. The total amount of suitable foraging habitat in the study area is 140,305 acres; therefore, there is a surplus of 67,618 acres of suitable foraging habitat in the study area. For purposes of this study, the CEQA significance threshold is 70 percent of the existing surplus, or 47,332 acres (Table 3).

Table 3
PROJECT IMPACTS AND CEQA SIGNIFICANCE THRESHOLD

	Existing	Remaining After Impact					
		Project 1,300	% of Existing	Cum. ¹ 14,187	% of Existing	Cum. ² 7,732	% of Existing
Foraging Habitat Required	72,687	--	--	--	--	--	--
Suitable Foraging Habitat	140,305	139,005	99.1	126,118	89.9	132,573	94.5
Surplus	67,618	66,318	98.1	53,431	79.0	59,886	88.6
CEQA Significance Threshold	47,332	--	--	--	--	--	--
Less than Significant Impact ³ /Surplus Remaining After Project Development	20,286	18,986	93.6	6,09	30.1	12,554	61.9

¹ Acreage of all existing, planned, or reasonably foreseeable solar projects within the study area used for the cumulative analysis

² Acreage of all existing, planned, or reasonably foreseeable solar projects within the study area that provide suitable foraging habitat for SWHA (see discussion in *Cumulative Impacts*).

³ Impact acreage that would be below the CEQA threshold of significance, or 67,618-47,332=67,618·0.3=20,286

Project Impacts and Mitigation

Nesting

Impacts

Because there are no trees or other suitable nesting structures on the project site, the project would not remove SWHA nesting habitat. Project construction/decommissioning activities within 0.25-mile of suitable trees could potentially disturb nesting SWHAs using those trees. There is one documented active SWHA nest within 0.5-mile of the project site that was confirmed during surveys in 2020 to be active.

CDFW management protocols for SWHA (CDFW 1994) stipulate a 0.25-mile buffer for “intensive new disturbances” around active nests, extended to 0.5-mile outside urban areas where disturbance is not a normal occurrence during the nesting season. CDFW (1994) cites heavy equipment operation, use of cranes or draglines, and rock crushing as examples of “intensive disturbance”. Normal agricultural operations in the vicinity of the project site include disking and plowing of fields by large (6-8 wheel) tractors and combine harvesters, and periodic presence of scores of agricultural laborers during planting and harvest. Therefore, intensive disturbances in the vicinity of active nests during the nesting season is the existing condition.

Equipment used for construction of the proposed project would include road graders (bladers), small self-contained drill rigs for boring support post holes, front loaders and forklifts, and semi-trucks. These vehicles and activities would not cause noise, dust emissions, or vibration greater than that typical of large agricultural equipment used in the region, nor would the impacts from such equipment and activities rise to the level of disturbance caused by heavy equipment, cranes or draglines, or rock crushing. Because the project activities would not result in an increased level of disturbance above the existing condition, an extended (0.5-mile) buffer would not be warranted for the project, and a 0.25-mile buffer would be sufficient to protect active SWHA nests from disturbance.

Mitigation

Implementation of the proposed mitigation measure below would reduce project impacts to nesting SWHA to less than significant.

Mitigation Measure: Swainson’s Hawk Nest Avoidance. Prior to initiation of construction/decommissioning activities during the SWHA breeding season (March 1 through September 15), surveys shall be conducted by a qualified biologist to determine whether there are any active SWHA nests within 0.25-mile of the project site using the most recent published pre-construction survey protocols, if available. If an active SWHA nest is discovered, no construction would be permitted within 0.25 mile of the nest until the young have fledged. If it is not feasible to avoid construction within 0.25 mile of the nest until the young have fledged, the applicant shall implement additional avoidance and minimization measures to ensure avoidance of take of SWHA as defined under the California Endangered Species Act, initiate consultation with CDFW, or obtain take authorization under the California Endangered Species Act, Section 2080.1 or 2081 of the Fish and Game Code prior to starting any construction-related activities within 0.25-mile of the nest(s). Avoidance measures may include, but are not limited to, installation of physical barriers to reduce noise or visual impacts to the nest, modifying construction

activities within close proximity to the nest (e.g. restricting pedestrian traffic and human presence outside of construction vehicles), and biological monitoring during construction to determine if the nesting birds are being disturbed.. Construction-related activities may commence in parts of the project site greater than 0.25-mile from the nest(s). If no active nests are discovered, no further action is required.

Foraging

Project-Level Impacts

The proposed project would result in conversion of 1,300 acres of active agricultural land in the study area into a solar PV generating facility. For purposes of this analysis, solar facilities are considered a land use unsuitable for SWHA foraging. Removal of 1,300 acres of habitat would reduce the surplus SWHA foraging habitat in the study area to 66,318 acres, which is 98.1 percent of the existing surplus, and well above the 70-percent CEQA significance threshold (Table 3). The project impact to the regional population of SWHA through foraging habitat loss would be less than significant, and no compensatory mitigation for impacts to foraging habitat would be required.

Cumulative Impacts

In addition to a project-specific assessment, CEQA also requires that a cumulative assessment be conducted to determine whether the project's incremental impacts are cumulatively considerable when added to other past, present, and reasonably foreseeable future actions. To do this, the study area is used as the cumulative impact assessment area. For purposes of this assessment, the cumulative impact is defined as all existing planned and proposed solar energy projects within the 10-mile radius study area (Figure 5).

Including the proposed Luna Valley Solar project, there are approximately 11 existing, planned, or reasonably foreseeable solar projects in the study area (Figure 5). The total area of these cumulative projects is 14,187 acres. The proposed project represents approximately 9.1 percent of the cumulative impact area. Development of all of the cumulative projects would reduce the surplus SWHA foraging habitat in the study area to 53,431 acres, which is 79.0 percent of the existing surplus and above the 70-percent CEQA significance threshold (Table 3).

Although all of the existing, planned, or reasonably foreseeable solar projects in the study area were considered in support of the cumulative analysis, it is worth noting that roughly half of the land proposed for development under the cumulative projects is already in unsuitable land uses. Of the 14,187 acres of cumulative projects, 338 acres are currently unbuilt and unsuitable for SWHA foraging and 6,117 acres are existing solar facilities already classified as unsuitable foraging habitat in this analysis. The remaining 7,732 acres of unbuilt cumulative projects [including the proposed project (6,432 + 1,300)] contain suitable foraging habitat (Figure 6). Considering only impacts to suitable foraging habitat, the cumulative impact would be 7,732 acres and the surplus remaining after development would be 59,886 acres, which is 88.6 percent of the existing surplus (Table3).

The project would contribute to a less than significant cumulative impact to the regional population of SWHA through foraging habitat loss, and no compensatory mitigation would be required.

DISCUSSION

Conclusions

Swainson's Hawk Nesting Impacts

The proposed Luna Valley Solar project would potentially result in significant impacts to nesting SWHA if there was an active SWHA nest within 0.25-mile of the project site at the initiation of construction activities. This potential impact would be less than significant after implementation of Mitigation Measure BIO-2: *Swainson's Hawk Nest Avoidance*.

Swainson's Hawk Foraging Impacts

The proposed Luna Valley solar project would not result in a significant impact to the regional population of SWHA through loss of suitable foraging habitat, nor would it contribute to a significant cumulative impact in concert with other existing, planned, or reasonably foreseeable solar projects. After project development, the amount of surplus suitable foraging habitat for SWHA in the study area would remain greater than 70 percent of the existing surplus and therefore provide sufficient surplus foraging habitat to allow for population growth and resiliency to disturbance, as well as to changes to the foraging landscape through changes in agricultural land uses.

The analysis performed for this study is based on previously accepted methods (Estep 2017, 2015, 2011) and makes use of the best available data. The analysis considers impacts to SWHA at a more biologically realistic scale than the method employed in the 1994 CDFW guidelines while remaining logistically feasible as well as generalizable to a wide range of projects and locations. The most limiting factor in the analysis is the need for a suitably current and accurate census of active SWHA nest territories in the study area. The CDFW guidelines define an active SWHA nest location as one that has been active in any of the previous 5 years; therefore, primary nest data for the study area should come from a ground survey within the previous 5 years. In this case, the majority of the study area has been surveyed for SWHA within the last 5 years between comprehensive ground surveys conducted within a 10-mile radius of the adjacent Scarlet Solar project site (Estep 2016) and SWHA protocol surveys within a 1-mile radius of the project site conducted in spring/summer 2020 by Tetra Tech (Tetra Tech, in prep). Data from CNDDDB, Estep (2011) and Estep and Dinsdale (2012) were used to supplement these data.

Comprehensive ground surveys of approximately 900,000 acres of land within Fresno and Kings counties revealed an estimated density of 0.07 SWHA nesting territories per square mile (Estep 2011). Studies of the adjacent Scarlet Solar project estimated a density of 0.07 SWHA nesting territories per square mile (HELIX 2018b). For this Luna Valley Solar study, there is an estimated 0.09 SWHA nesting territories per square mile, which is slightly higher than previous studies in the region and may be the result of double counting SWHA nest territories as pairs move from one location to another or alternatively could indicate a slight increase in the population. In any case, because the accounting of SWHA nests for this study is similar or slightly greater than other studies in the region, the estimated 32 regional pairs of SWHA used to inform the foraging needs of the regional population of SWHA for this study is considered to provide a reliable estimate of the amount of foraging habitat required to sustain the regional population and may slightly overestimate the amount of foraging habitat needed.

The loss of 1,300 acres of agricultural land will not affect the distribution or abundance of nesting Swainson's hawks in the study area. Because it represents only 0.9% of the available foraging habitat within the study area, its conversion is negligible relative to availability, and particularly with regard to the relatively small number of Swainson's hawks that nest in the study area. The loss of 1,300 acres of agricultural land would not represent a significant loss of foraging habitat for Swainson's hawks and does not represent a significant CEQA impact. At the cumulative level considering other solar projects in the study area, all existing and proposed solar projects represent approximately 10% of the total available foraging habitat within the study area which leaves significantly more foraging habitat than is needed by the regional population.

In conclusion, the proposed project would not result in a significant reduction (based on the significance threshold and assessment methods used here) of available Swainson's hawk agricultural foraging habitat at either the project or cumulative level, and that as a result of this analysis no mitigation should be required as per CEQA guidance.

Distribution of SWHA Nests and Habitat in the Study Area

The distribution of SWHA nest territories in the study area is concentrated in the northeastern portion of the study area. Of the 32 mapped nests in the study area, 20 are in the northeastern quadrant of the study area roughly north of Manning Avenue and east of Highway 33 where the majority of the moderate to high quality foraging habitat is accessible (including the Mendota Wildlife Area), with the exception of the grasslands south and west of Interstate 5 in the southwest portion of the study area. Only 5 nests are located in the southern and western portions of the study area where unsuitable land uses are also very dense. This pattern may be driven partly by nest site availability, as suitable trees are scarce in the south and west of the study area; however, it also indicates that SWHA nesting may be driven by proximity to moderate and high-quality foraging habitat.

Distribution of Habitat and Impacts in the Study Area (Sub-area Analysis)

Given the concentration of SWHA nests in the northeastern quadrant of the study area, it is evident that a large portion of the study area in the south and west may be of limited value to all but a few nest territories. This pattern has been noted in other studies of this type and addressed through a "sub-area analysis" (Estep 2017, 2011). The sub-area analysis typically removes a large portion of the study area where nests are at very low density and repeats the analysis of required and available foraging habitat with a greatly reduced acreage of available habitat compared to the remaining regional population. The project site is always retained in the sub-area if such an analysis is done (Estep 2017, 2011). In cases where the project site would logically be excluded from the sub-area, such as when the distribution of nests is highly concentrated in one quadrant of the study area, a sub-area analysis is not warranted, as the underlying rationale for it implies that the project site is not currently important to the maintenance of the regional population. For this project, the sub area analysis was not considered to be appropriate. The distribution of nests is so concentrated that the project site appears to be peripheral to the regional population and a logical "sub-area analysis" would not include the proposed project site. Therefore, a sub-area analysis was not done for this study.

1.0 INTRODUCTION

Tetra Tech, Inc. (Tetra Tech) prepared this Burrowing Owl Survey Report for the proposed Luna Valley Solar Project (Project). Luna Valley Solar I, LLC (Project proponent) proposes to develop approximately 1,300 acres of land (Project site) located in the unincorporated community of Levis, Fresno County, California, for the development of a solar energy facility. This report has been prepared to document the burrowing owl (*Athene cunicularia*) survey methods, results, impact assessment, and recommendations, in accordance with the guidelines stated in the *Burrowing Owl Survey Protocol and Mitigation Guidelines*, and Appendices C and D in the *Staff Report on Burrowing Owl Mitigation* (The California Burrowing Owl Consortium 1993, California Department of Fish and Game 2012).

Burrowing owl (BUOW) use a variety of habitat types characterized by low-growing vegetation and the presence of burrows or burrow-like structures (surrogate burrows). BUOW may utilize a site for breeding, foraging, overwintering, or transient/migration stops; therefore, a site that is utilized by BUOW may only be occupied for a short duration of a year. Agricultural land can be considered suitable habitat for BUOW, dependent upon the presence of burrowing mammals or suitable surrogate burrows. Current threats to California's BUOW population include habitat loss/fragmentation, eradication/displacement of ground squirrels and other burrowing mammals, and various other human disturbances (The California Burrowing Owl Consortium 1993, California Department of Fish and Game 2012). BUOW are a California Department of Fish and Wildlife (CDFW) Species of Special Concern (SSC) and a BLM Sensitive Species.

1.1 PROJECT SITE LOCATION

The Project site is located on approximately 1,300 acres of privately-owned, undeveloped, agricultural land owned by the Westlands Water District. The property is in the rural, unincorporated community of Levis, Fresno County, California (Figure 1). Levis is in the western section of Fresno County and within the westside valley area geographic region of the county. The region consists of a single broad, flat valley, drained by the San Joaquin River and its tributaries, bound by the Sierra Nevada to the east and the Coast Range to the west. The elevation ranges from about 185 to 215 feet above sea level. Historically, the dominant habitat types were arid grasslands and shrublands with expansive Valley Oak riparian woodlands and freshwater emergent wetlands in the proximity of water sources. Today, most of the land has been converted for agricultural uses. Levis is also located in Central California, within the Great Valley, also called the Central Valley, ecological section of the state (Figure 2). From the Project site, the nearest community is Tranquillity, a Census-Designated Place, approximately 9 miles to the northeast. The cities of Mendota and San Joaquin are approximately 10 miles north and east of Project area, respectively. The City of Fresno, the largest city in the county, is located approximately 35 miles northeast of the Project site.

The Project property is made up of 16 contiguous parcels with the following Assessor's Parcel Numbers: 028-060-34, 028-060-69, 028-060-70, 028-060-71, 028-060-72, 028-101-15, 028-101-17, 028-101-19, 028-101-29, 028-101-58, 028-101-59, 028-101-65, 028-101-69, 028-101-72, 028-101-74, and 028-101-77. The Project site is in the United States Geological Survey (USGS) Levis 7.5-Minute Topographic Quadrangle Map, within Township 15S, Range 14E, Sections 23, 24, 25, and 26, Mt. Diablo Principle Meridian (Figure 3).

The site has historically been used for dry-farmed (non -irrigated) agriculture (low-yield production of winter wheat and oats) and has been used for this purpose for the last 10 years. Agricultural land in this area has been documented to contain relatively high levels of selenium and a water table that does not provide sufficient drainage for commercially irrigated crops. During years in which rainfall is insufficient to produce crops, the land is grazed as rangeland grasses. Currently, some portions of the Project area lie fallow while the majority of the area is used to grow livestock fodder such as alfalfa.

Document Path: P:\148_Clearway\Luna_Valley_Solar_CAD\Layouts\Burrowing_Owl_Report\Fig_2_Project_Vicinity.mxd

According to the United States Department of Agriculture (USDA) National Resources Conservation Service (NRCS) Web Soil Survey (2020), the Project site includes soils four types of soil. The soils are: Posochanet clay loam (approximately 40 percent of the site), Tranquillity clay (approximately 30 percent of the site), Ciervo clay (approximately 30 percent of the site), and Calfax clay loam (less than 1 percent of the site).

A paved road, W. Manning Avenue, cuts through the approximate middle of the Project site from east to west; State Route 33 (S. Derrick Avenue) borders the eastern portion of the Project site; S. Ohio Avenue, an unpaved road, cuts through the general middle of the Project site from north to south; and W. Dinuba Avenue, an unpaved road, borders the southernmost section of the Project site (Figure 2).

There are no access limitations to the Project site and one can reach the site from W. Manning Avenue, State Route 33 (S. Derrick Avenue), S. Ohio Avenue, W. Dinuba Avenue, and interior unpaved access roads. Most roadways in the Project vicinity are unimproved or paved without curb or sidewalk improvements. Interstate 5, located south and west of the Project site, is the only major transportation route near the site. W. Manning Avenue and State Route 33 can both be accessed by Interstate 5. The California Aqueduct generally parallels Interstate 5 and is also located south and west of the site. Both W. Manning Avenue and State Route 33 have bridges that cross over the aqueduct.

1.2 PROJECT DESCRIPTION

The Project consists of constructing and operating a photovoltaic solar electricity generating facility and energy storage system and associated infrastructure that would produce up to 200 megawatts of alternating current energy at the point of electrical grid interconnection on approximately 1,300 acres of privately-owned agricultural land. The Project would include the construction of:

- Solar arrays, including Process Control System skids, inverters, and transformers.
- Electrical substation and electrical interconnection facilities.
- Energy storage system.
- Operation and maintenance building.
- Septic system and leach field.
- Supervisory control and data acquisition system.
- Meteorological data system.
- Buried conduit for electrical wires.
- Overhead collector lines.
- On-site access roads and security fencing.

Construction is tentatively scheduled to begin in 2022 (start date is to be determined) and last approximately 16 months. Project construction would occur between 6:00 a.m. and 9:00 p.m., Monday through Friday, in compliance with the County's Code. A variety of equipment is planned for use during the 16-month construction phase including: skid steers, water trucks, welder, pickup trucks, bulldozers, front end loaders, graders, roller compactors, trenchers, forklifts, pile drivers, backhoes, crane, and aerial lifts. The average number of onsite personnel is anticipated to be approximately 200, with a peak in both personnel and equipment use during month seven of construction. Construction will consist of site preparation, grading, preparing staging areas and on-site access routes, and assembling the trackers and constructing electrical interconnection facilities. Because the site is already mostly flat, grading would be minimal. The facility would begin operation in 2023. Project site plans can be found in Appendix A, *Site Plans*.

2.0 METHODS

This section describes the literature search and field methods used for the protocol BUOW habitat assessment, burrow survey, breeding season survey, and winter season survey in accordance with the *Burrowing Owl Survey Protocol and Mitigation Guidelines*, and Appendices C and D in the *Staff Report on Burrowing Owl Mitigation* (The California Burrowing Owl Consortium 1993, CDFW 2012).

2.1 HABITAT ASSESSMENT AND BURROW SURVEY

A literature and data review of pertinent background information for the Project site was completed prior to fieldwork, which included the CDFW California Natural Diversity Database (CNDDDB) data (CDFW 2020), the USGS 7.5-Minute Topographic Map *Levis* Quadrangle, aerial imagery (Google Earth®), historic imagery (Google Earth® and Historic Aerials by Netronline [Netronline 2020]), and interactive maps. Topography describes the physical features of an area of land. The topographic features looked at include natural landforms, aquatic features, developed lands, agricultural lands, undeveloped lands, and terrain.

According to the CNDDDB, the closest BUOW occurrence record is approximately 5 miles east of the Project site (CDFW 2020). There are no records of BUOW occupying the Project site. BUOW was observed on the adjacent Tranquillity project site, which borders the Luna Valley Solar Project site to the south, during 2013 and 2014 surveys conducted by Rincon Consultants, Inc. (2013). The BUOW present on the Tranquillity site was considered a transient juvenile; four additional BUOW were determined to occupy burrows located adjacent to the Tranquillity project site (Rincon Consultants, Inc. 2013). Therefore, it was determined that the Luna Valley Solar Project site is in the known distributional range of the BUOW, and a habitat assessment and BUOW Phase 2 transects were surveyed in accordance with the *Burrowing Owl Survey Protocol and Mitigation Guidelines* (The California Burrowing Owl Consortium 1993) and Appendix C in the *Staff Report on Burrowing Owl Mitigation* (CDFW 2012).

The habitat assessment and Phase 2 transects were conducted from May 4, 2020 through May 8, 2020, by Tetra Tech biologists Nikki Bottum, Daniel Berg, and Monique O'Conner. Biologists ascertained existing site conditions, mapped vegetation communities in accordance with the *Manual of California Vegetation, Second Edition* (Sawyer et al. 2009), and surveyed the entire Project site for potential burrows and burrow surrogates by walking 30-meter interval transects. Burrow transects were walked during optimal weather conditions (no heavy rain or fog) to allow for the greatest visibility possible. 100 percent visual coverage of the Project site ground surface was achieved. In addition, a 150-meter (approximately 500-foot) buffer zone around the Project site was surveyed for potential burrows and burrow surrogates using binoculars, due to access limitations. A burrow/burrow surrogate was considered suitable for BUOW if it was equal or greater than 11 cm [4.3 inches] in diameter [height and width] and 150 cm [59 inches] in depth (Johnson et al. 2010). Potential surrogate burrows consisted of man-made structures such as pipes, culverts, debris piles, or other various openings that met the size criteria stated above. All potentially suitable burrows and burrow surrogates were mapped using the Collector mobile application paired with a sub-meter accuracy Arrow 100 Global Positioning System (GPS) device and documented on a Phase II BUOW datasheet. All BUOW survey datasheets are included in Appendix B. Any signs of use, including the presence of pellets, feathers, tracks, whitewash, burrow decoration materials, eggshell fragments, etc. were also documented.

2.2 PROTOCOL BREEDING SEASON SURVEYS

Three protocol level BUOW breeding season surveys were conducted on May 9, 2020, June 11, 2020, and July 10, 2020, in accordance with survey protocol dates of: between April 15, 2020 and July 15, 2020, with at least one visit after June 15, 2020. During these surveys, all potential burrow surrogates mapped during the Phase 2 burrow survey/habitat assessment were visited during the timeframe of two hours before sunset to one hour after sunset or from one hour before to two hours after sunrise. Surrogate burrows were observed using binoculars as to maintain a minimum distance of 50 meters to minimize disturbance, should

occupied burrows or BUOW individuals be present. Surveys were not conducted during heavy rain, high winds greater than 20 miles per hour, or dense fog. Any BUOW sign, possible predators present, and any evidence of predation of owls were noted.

2.3 PROTOCOL WINTER SEASON SURVEY

As required by the survey protocol, a BUOW winter season survey was conducted at the Project site because BUOW were not observed during the breeding season surveys. The survey was conducted on January 4 and 5, 2021, in accordance with the required survey protocol dates (between December 1 and January 31). During this survey, all potential burrow surrogates mapped during the Phase 2 burrow survey/habitat assessment were visited twice, once during the timeframe of two hours before sunset to one hour after sunset and once from one hour before to two hours after sunrise. The same methodology for breeding season surveys described above was performed during the winter season survey.

3.0 RESULTS

This section describes the results of the protocol BUOW habitat assessment, burrow survey, breeding season survey, and winter season survey.

3.1 HABITAT ASSESSMENT AND BURROW SURVEY

It was determined that the Project site is in the known distributional range of the BUOW, and that the entire Project site contains suitable habitat to potentially support BUOWs due to its current agricultural use and low-growing vegetation. All vegetated areas of the Project site had previously been disked/tilled. Vegetation communities within the approximate 1,300-acre Project site and 150-meter buffer surrounding the Project site were mapped in accordance with the *Manual of California Vegetation, Second Edition* (Sawyer et al. 2009). Given the disturbed nature of the Project site, and dominance by primarily non-native plant species, a best attempt to categorize vegetation communities according to Sawyer et al. was made. However, in the case that membership rules/community definitions were not met, vegetation communities were named according to a best fit for the dominant species observed, aligned to the *Manual of California Vegetation, Second Edition* structure. Table 1 summarizes the five vegetation communities observed and their corresponding acreage. The reported acreage includes the 150-meter biological study area (BSA). Results of the vegetation mapping are shown in Figure 4.

Table 1: Vegetation Communities

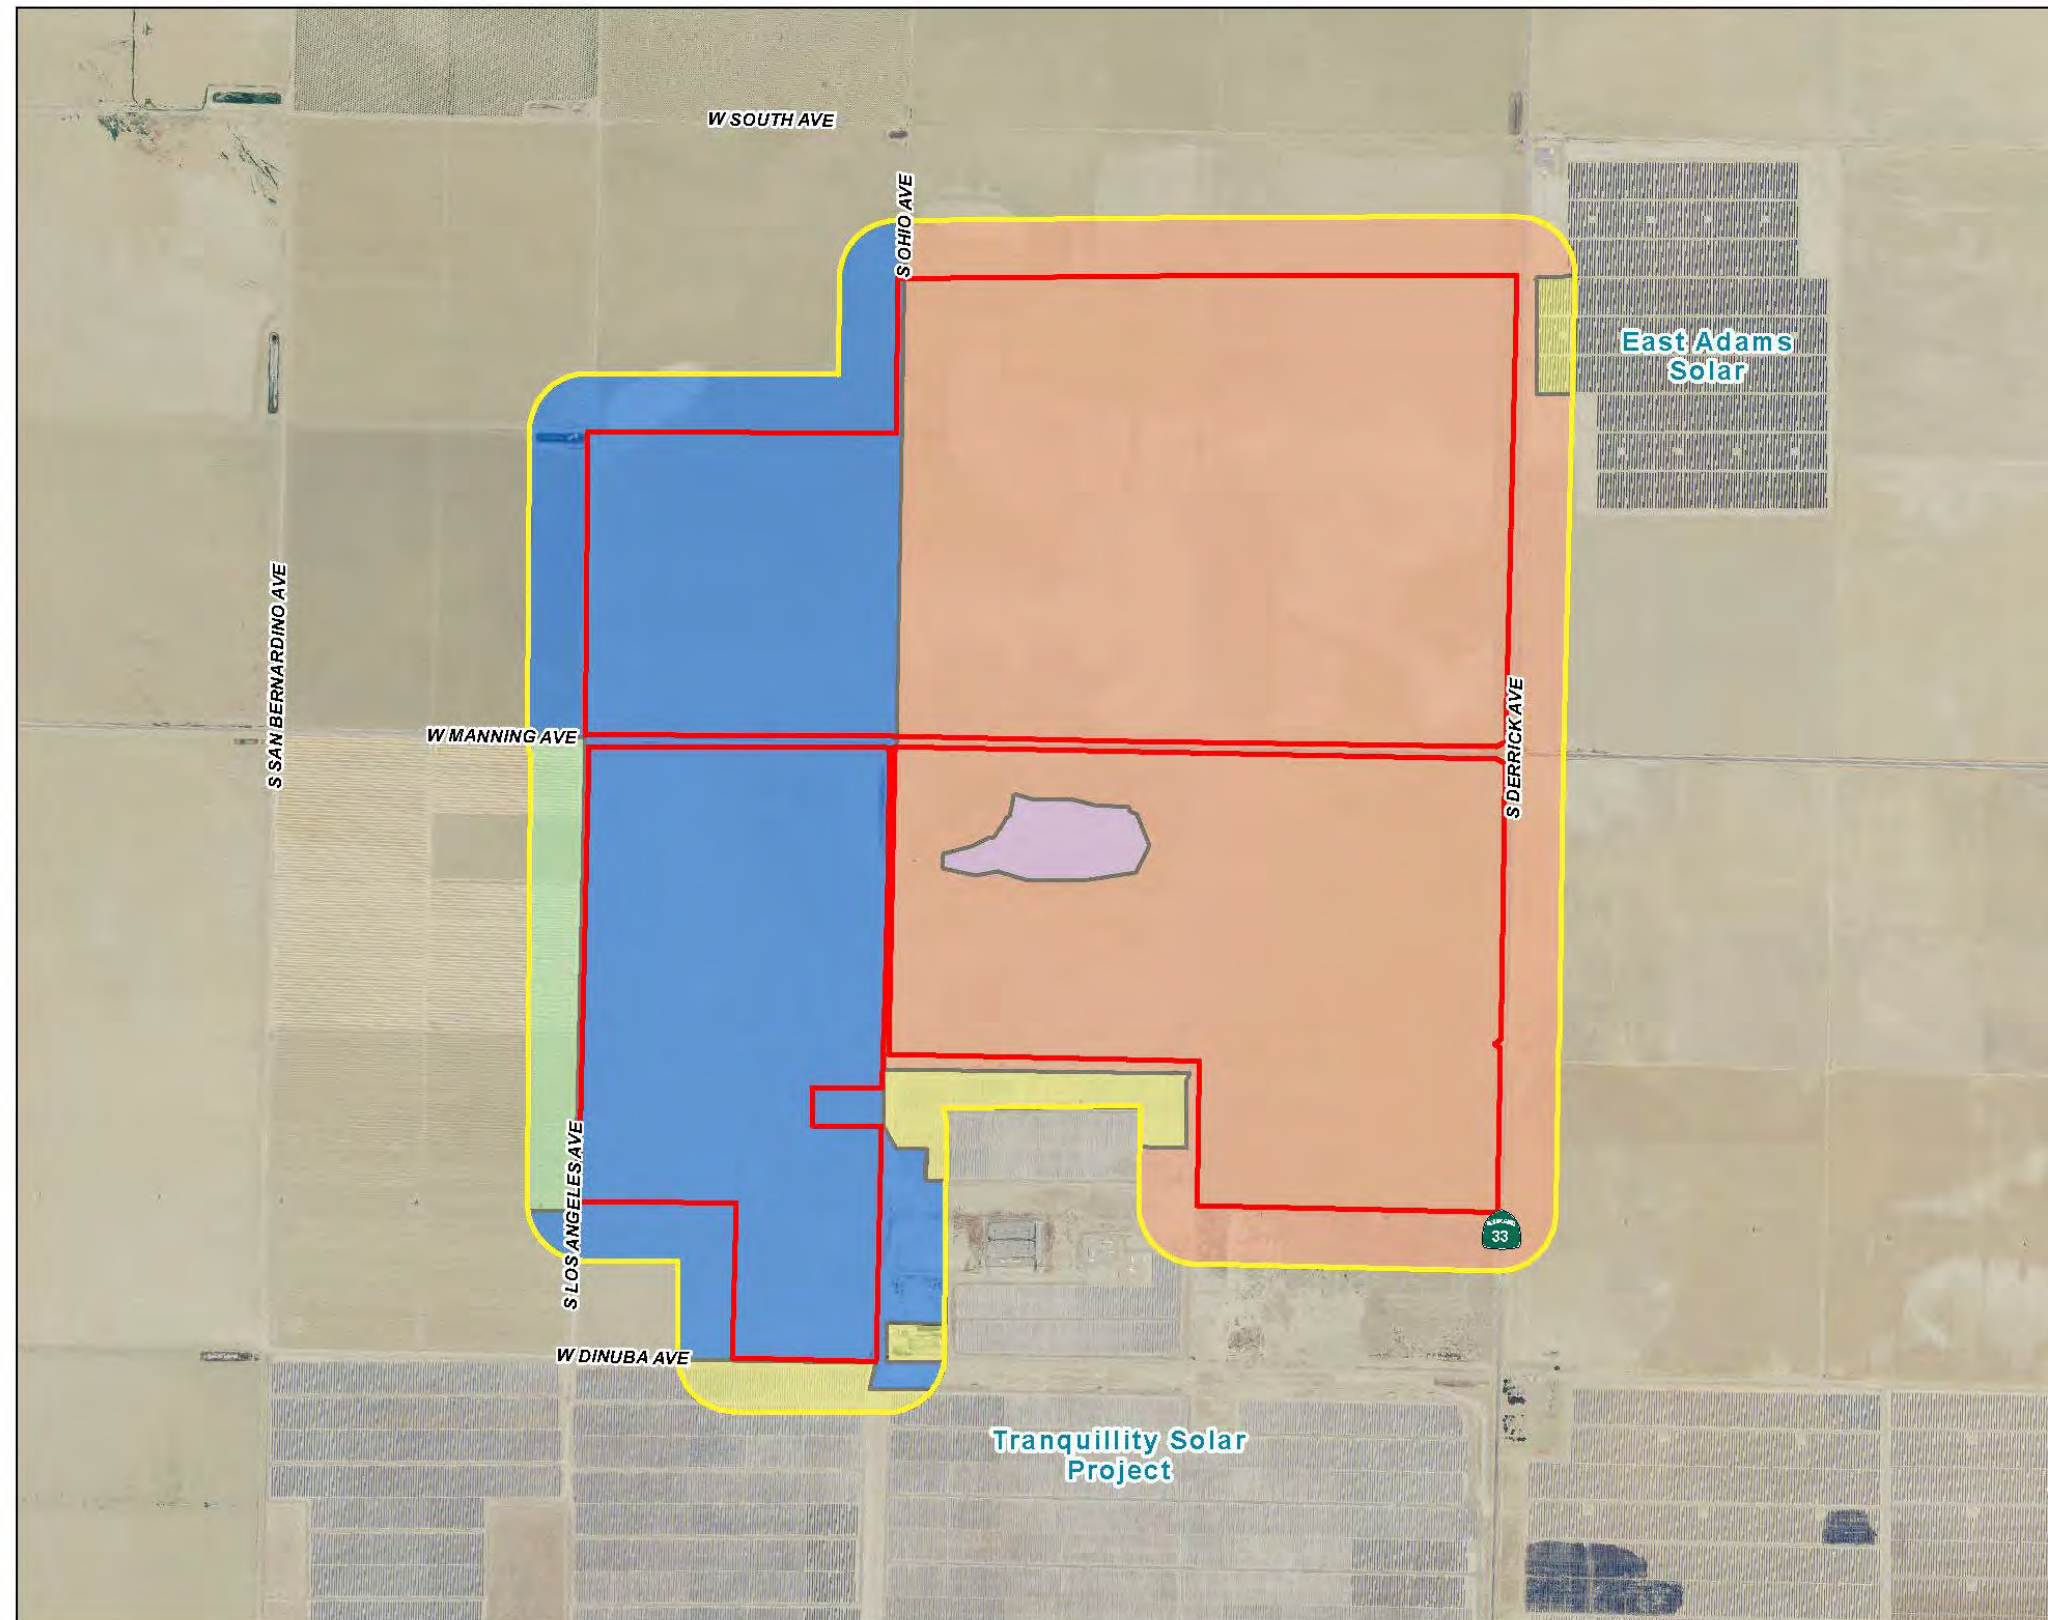

Vegetation Communities	Acres within BSA
<i>Hordeum murinum</i> – <i>Sisymbrium irio</i> Herbaceous Semi-Natural Alliance	1,067.2
<i>Hirschfeldia incana</i> – <i>Salsola</i> sp. Herbaceous Semi-Natural Alliance	571.3
Developed	55.9
Cultivated Pistachio	40.6
<i>Atriplex coronata</i> var. <i>coronata</i> - <i>Stellaria media</i> Herbaceous Semi-Natural Alliance	20.4
Total	1,755.4*

Note: Total acres include the Project site and 150-meter buffer.

Hordeum murinum – *Sisymbrium irio* Herbaceous Semi-Natural Alliance was the most common community found throughout the Project site, covering over 60 percent of the BSA. This community consisted of non-native grasslands and contained the following dominant plant species: non-native wall barley (*Hordeum murinum*), non-native London rocket (*Sisymbrium irio*), and non-native shortpod mustard (*Hirschfeldia incana*). Density of vegetation varied, with some areas of dense herbs where bare ground was not visible, and some areas where large patches of bare ground emerged.

Hirschfeldia incana – *Salsola* sp. Herbaceous Semi-Natural Alliance occurred primarily on the western portion of the Project site and consisted of the following dominant plant species: non-native shortpod mustard and non-native thistle (*Salsola* sp.). This community contained large patches of bare ground and appeared to have been the portion of the Project site most recently tilled. Other emergent native and non-native forbs were present, but with lower coverage than shortpod mustard and thistle.

Atriplex coronata var. *coronata* - *Stellaria media* Herbaceous Semi-Natural Alliance was found in the central portion of the project site. This community contained the following dominant plant species: crowscale (*Atriplex coronata* var. *coronata*) and common chickweed (*Stellaria media*). Other emergent native and non-native forbs were present, such as big saltbush (*Atriplex lentiformis*) but with lower coverage than crowscale and common chickweed. The variety of crowscale observed is a California Native Plant Society (CNPS) Rank 4.2 species (CNPS 2020).

Scale is 1:16,000 when printed at 11"x17"

NOT FOR CONSTRUCTION

Cultivated Pistachio occurred only in the BSA 150-meter buffer on the western end of the Project site and contained immature planted pistachio trees.

Developed areas also only occurred in the BSA 150-meter buffer, and contained solar panels and fencing associated with the adjacent Tranquillity Solar Project and East Adams Solar Project.

No small mammal burrows that would be considered suitable for BUOW use were documented within the Project site or the 150-meter buffer. A total of 14 suitable potential burrow surrogates were mapped during the burrow survey along existing roads on the border of the Project site or within the 150-meter buffer (no suitable potential burrow surrogates were found within the proposed development area); details on these potential burrow surrogates are included in Table 2 and locations are shown on Figure 5. Suitable potential burrow surrogates included 10 culverts (C), 3 individual pipes (P), and 1 pile of pipes. Potential sign in the form of whitewash was observed at C9, C10, and P4 (Figure 5); this whitewash could be from any bird species utilizing the site. Biologists did not note indication that whitewash was more likely from BUOW than other bird species. All potential burrow surrogates occurred adjacent to existing roads. Photographs are included in Appendix C, *Photographs*.

Table 2: Potential Burrow Surrogates Identified during the Burrow Survey

Burrow Surrogate Number	Dimensions (inches)	Sign Observed	Photo Number (Appendix C)	Notes
C1	12.5 x 27	No	Photograph 1	None.
C2	22 x 24	No	Photograph 2	None.
C3	84 x 36	No	Photograph 3	Three adjacent culverts of same dimensions.
C4	30 x 23	No	Photograph 4	Two adjacent culverts of same dimensions.
C5	7 x 16	No	Photograph 5	One side of culvert mostly filled with sediment, other side of suitable size.
C6	24 x 24	No	Photograph 6	None.
C7	20 x 20	No	Photograph 7	None.
C8	16 x 13	No	Photograph 8	None.
C9	23 x 23	Yes – whitewash observed inside one culvert.	Photograph 9	Four adjacent culverts of same dimensions.
C10	28 x 20	Yes – small amount of whitewash observed inside one culvert.	Photograph 10	Two adjacent culverts of same dimensions.
P1	Various Sizes	No	Photograph 11	Sedentary pile of pipes.
P2	10 x 10	No	Photograph 12	None.
P3	10 x 10	No	Photograph 13	None.
P4	10 x 10	Yes – whitewash observed inside pipe.	Photograph 14	None.

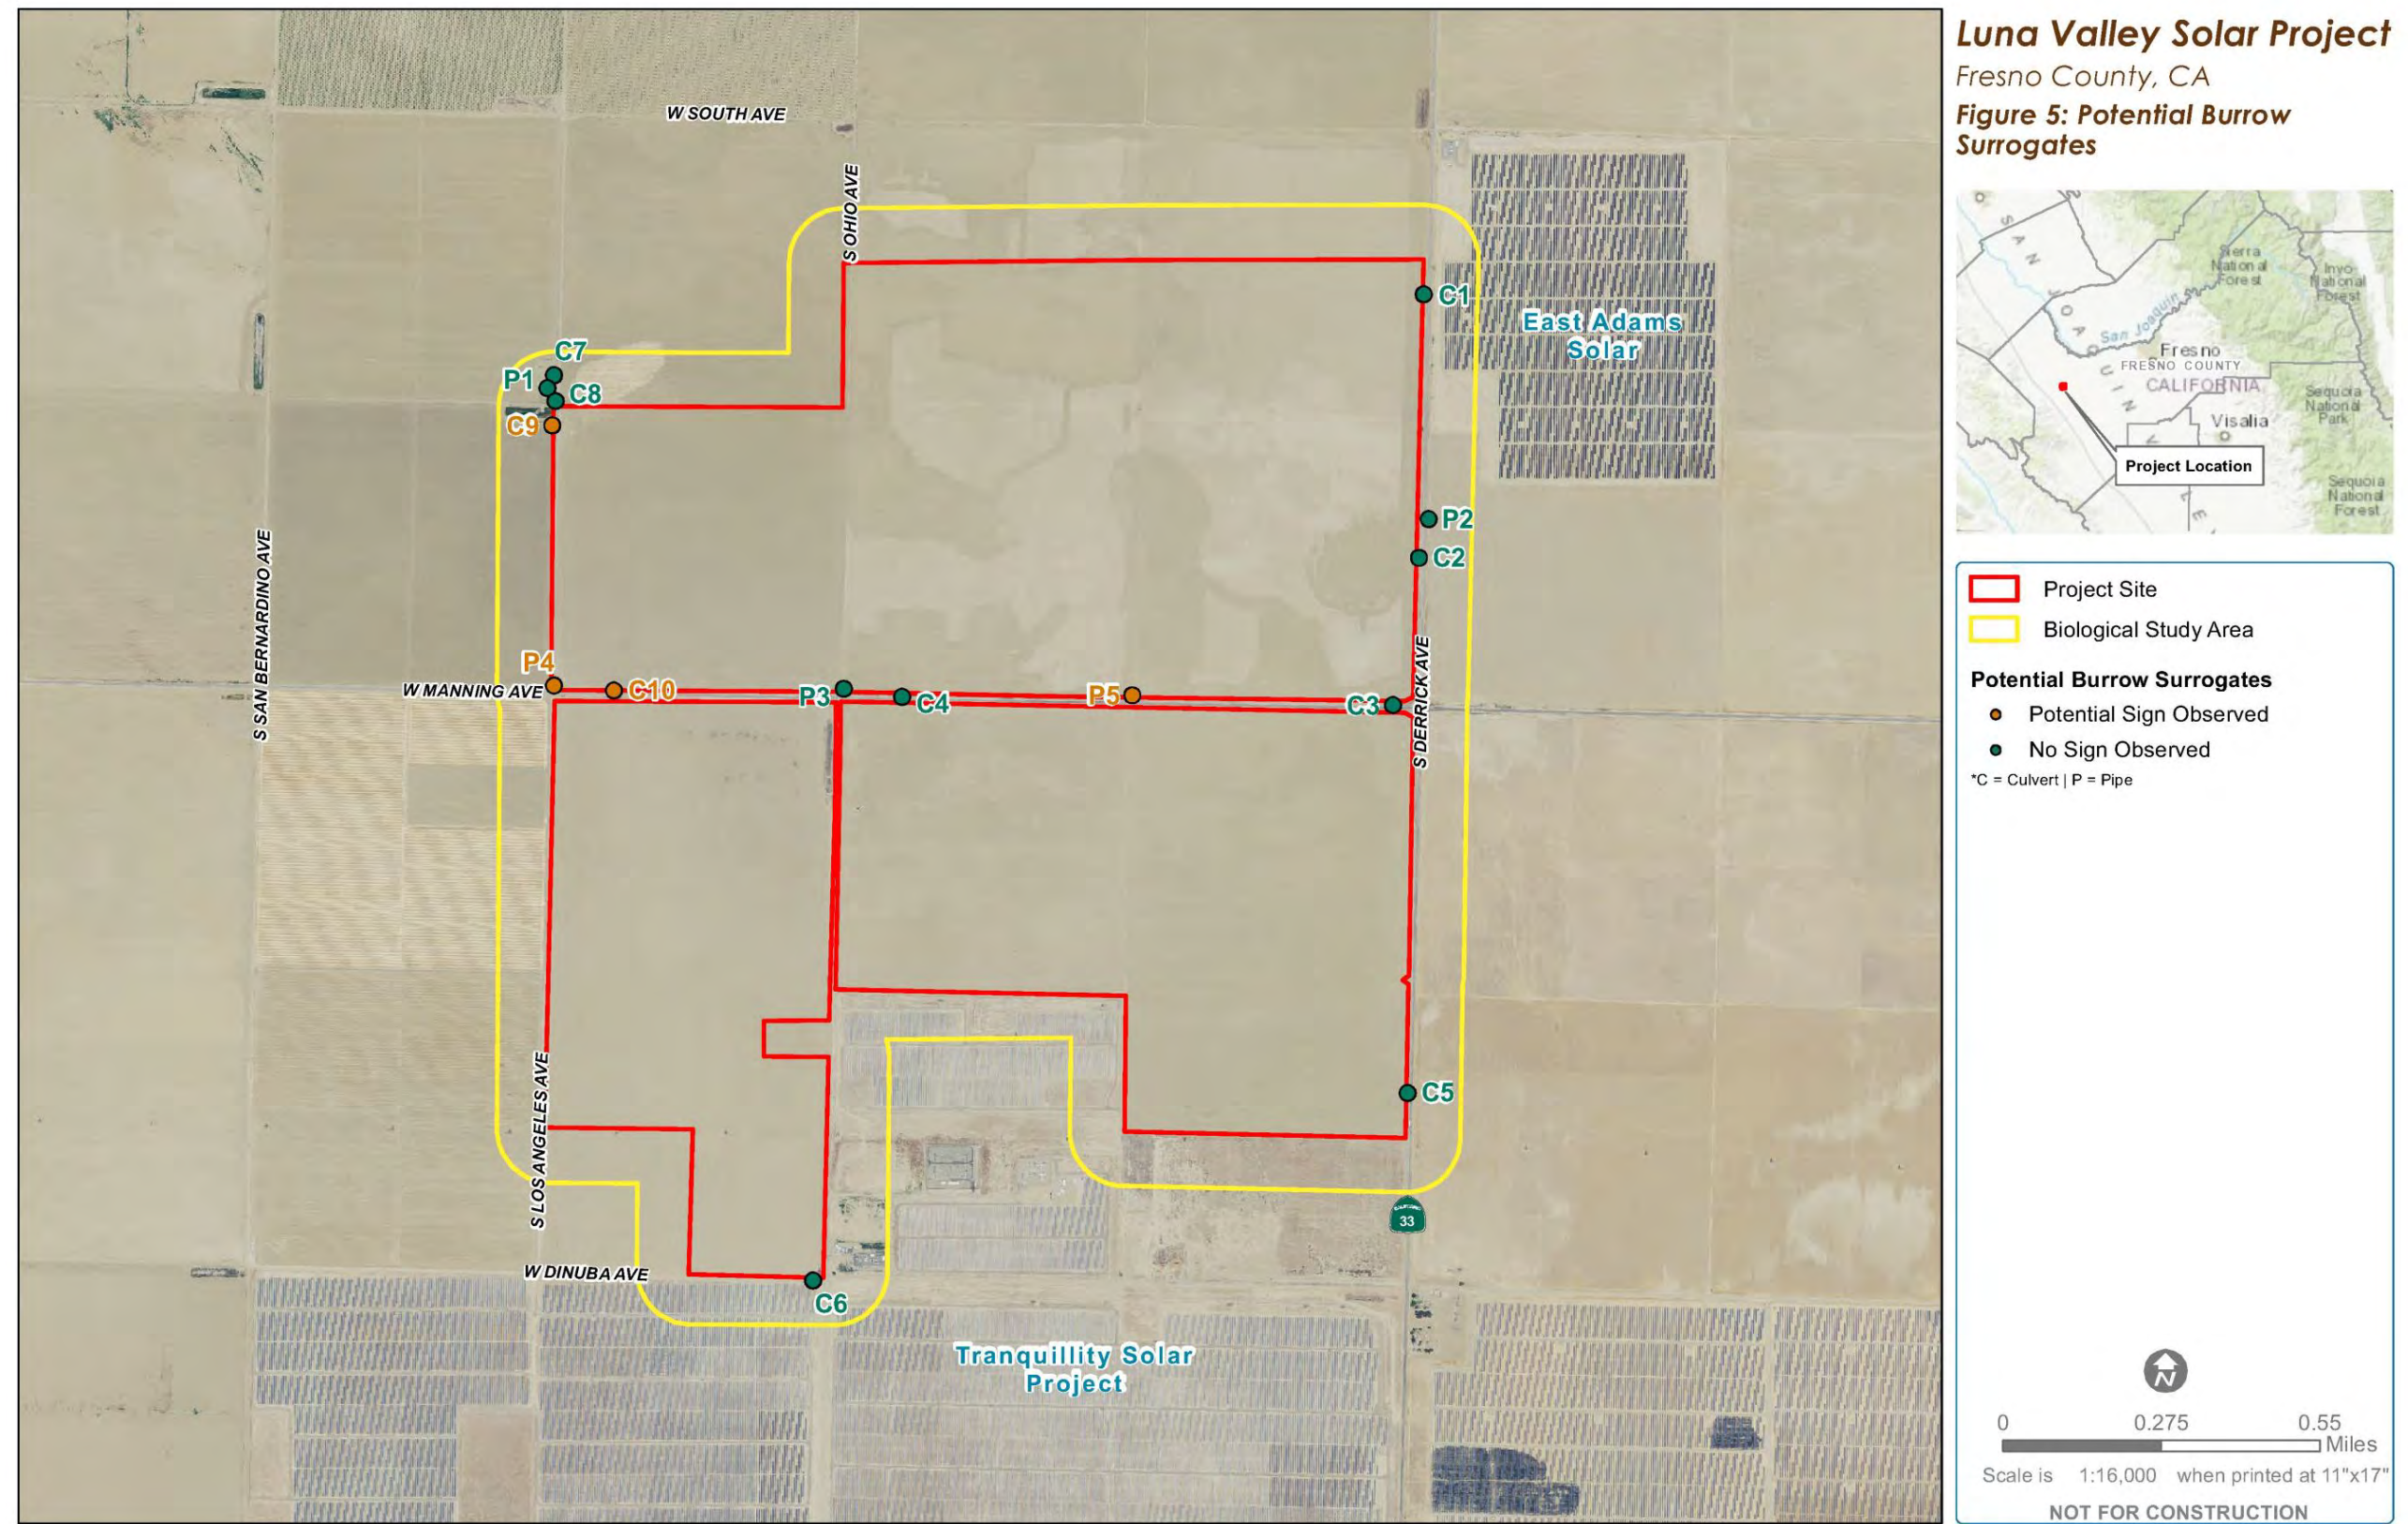

Table 3 lists other wildlife species observed on the Project site. Species including great horned owl (*Bubo virginianus*), red-tailed hawk (*Buteo jamaicensis*), Swainson's hawk (*Buteo swainsoni*), northern harrier (*Circus hudsonius*), common raven (*Corvus corax*), and gophersnake (*Pituophis catenifer*) could potentially predate on BUOW if present. No evidence of predation of BUOW was observed, although a common raven feather was observed near a pipe where a cast pellet was observed (P5) during the winter season surveys (as discussed below).

Table 3: Wildlife Species Observed

Scientific Name	Common Name
Mammals	
<i>Canis latrans</i>	coyote
<i>Dipodomys sp.</i> ***	kangaroo rat

Notes:

*CDFW Species of Special Concern or Watch List

**Federal Threatened species

***Numerous species of common kangaroo rat may occur at the site. One kangaroo rat was observed on the site and it was determined to not be a special-status species.

3.2 PROTOCOL BREEDING SEASON SURVEYS

BUOW were not detected during any of the three protocol breeding season surveys. Additionally, no new signs of use were observed. Signs of use (whitewash at C9, C10, and P4) documented during the Phase 2 burrow survey remained present and were observed in the breeding season surveys. This whitewash could be from any bird species utilizing the site. Biologists did not note indication that whitewash was more likely from BUOW than other bird species. Table 4 presents the results of the breeding season surveys.

3.3 PROTOCOL WINTER SEASON SURVEY

BUOW were not detected during the protocol winter season survey. One new suitable potential burrow surrogate was mapped during the survey, which consisted of an individual pipe ("P5"), as shown on Figure 5. P5 was previously not suitable because it was filled with soil and did not meet the minimum burrow size criteria. However, during the winter season survey, it was observed that P5 had been dug out and/or washed out and was found to meet burrow size criteria during the winter season survey. P5 had a diameter of approximately 8 x 10 inches with a depth of greater than 59 inches. A photo is included in Appendix C (Photograph 15).

Numerous gray cast pellets that were approximately 1 inch long and consisted of small bones and fur were found at the entrances of P4 and P5. While the pellets were likely from a small bird of prey such as an owl or American kestrel (*Falco sparverius*), their location at the entrance of two pipes and the lack of raptor perches nearby indicate that these were most likely from BUOW. Representative photos of these pellets are provided in Appendix C. Whitewash, large mammal excrement, an animal bone, and a common raven feather were also found at P5. Signs of use (whitewash at C9, C10, and P4) documented during the Phase 2 burrow survey and breeding season surveys remained present and were observed in the winter season survey. This whitewash could be from any bird species utilizing the site. However, the presence of cast pellets at P4 and P5 indicate that BUOW are likely to be present at these locations. Table 5 presents the results of the winter season survey.

Table 4: BUOW Breeding Season Survey Results

Survey	Date	Start Time (am/pm)	End Time (am/pm)	Temperature (°F)	Wind Speed (mph)	Cloud Cover (%)	Potential Sign Observed	BUOW Observed	Biologists

4.0 DISCUSSION AND SUMMARY OF RECOMMENDATIONS

The presence of cast pellets found at two suitable potential burrow surrogates indicates that BUOW are likely using the site. Therefore, use of heavy machinery, and/or significant ground disturbance during construction activities has the potential to disturb BUOW, if present.

The results of the habitat assessment and burrow survey have been used to develop recommendations for pre-construction surveys and avoidance and minimization measures. The recommendations within this report are preliminary and will be refined during the California Environmental Quality Act (CEQA) process as more details about the project design and schedule are determined. The culverts and pipes found at the Project site that provide burrow surrogates for BUOW are unlikely to be directly impacted by ground disturbance because they are located on the boundary of the site along existing roads. However, construction activities are planned directly adjacent to these locations, and noise during construction may disturb BUOW if present in the culverts or pipes.

BIO-1: To protect BUOW, the following conditions shall be met prior to construction:

- A focused avoidance (preconstruction) survey for BUOW presence, including existing potential burrow surrogates and any new potential suitable burrows/surrogates that may have become available, shall be conducted according to CDFW guidelines by a qualified biologist prior to the use of heavy machinery and/or significant ground disturbance associated with construction activities. The survey shall be required within 14 days prior to the commencement of construction activities and shall occur within the Project site and immediate vicinity of the Project site in areas with suitable burrowing habitat. The preconstruction survey would include visiting all potential burrow surrogates during the timeframe of two hours before sunset to one hour after sunset or from one hour before to two hours after sunrise, and a brief visual spot check of the site, identifying any new man-made structures that could be suitable habitat; the preconstruction survey would not include protocol level transects if current agricultural disturbances, such as tilling, continue.
- The BUOW pre-construction survey can be conducted in conjunction with other required preconstruction surveys, if timing is appropriate.
- If construction activity as defined above halts for a period of 14 days or more, the survey will need to be conducted again prior to the continuation of construction activities.
- If BUOW or their sign are detected within the Project site or immediate vicinity during the preconstruction survey, buffers where no work would occur, as defined in the 2012 CDFW Staff Report, may be established to protect BUOW. Buffer size is dependent upon time of year and level of disturbance at the Project site. Depending on the level of disturbance, a smaller buffer may be established in consultation with CDFW.
- If burrow avoidance is infeasible during the non-breeding season, a CDFW qualified biologist shall implement a passive relocation program in accordance with the 2012 CDFW Staff Report. A Burrowing Owl Exclusion and Mitigation Plan and Mitigation Land Management Plan shall be prepared in accordance with the 2012 CDFW Staff Report and reviewed and approved by CDFW prior to passive relocation activities.

BIO-2: Any construction materials stored on the Project site or adjacent areas that could serve as a burrow surrogate for BUOW, such as sedentary above ground pipes or sedentary rip rap, shall be covered when not in use as to not attract BUOW to the Project site. The construction staff should check the construction materials daily to ensure they are sufficiently covered.

1.0 INTRODUCTION

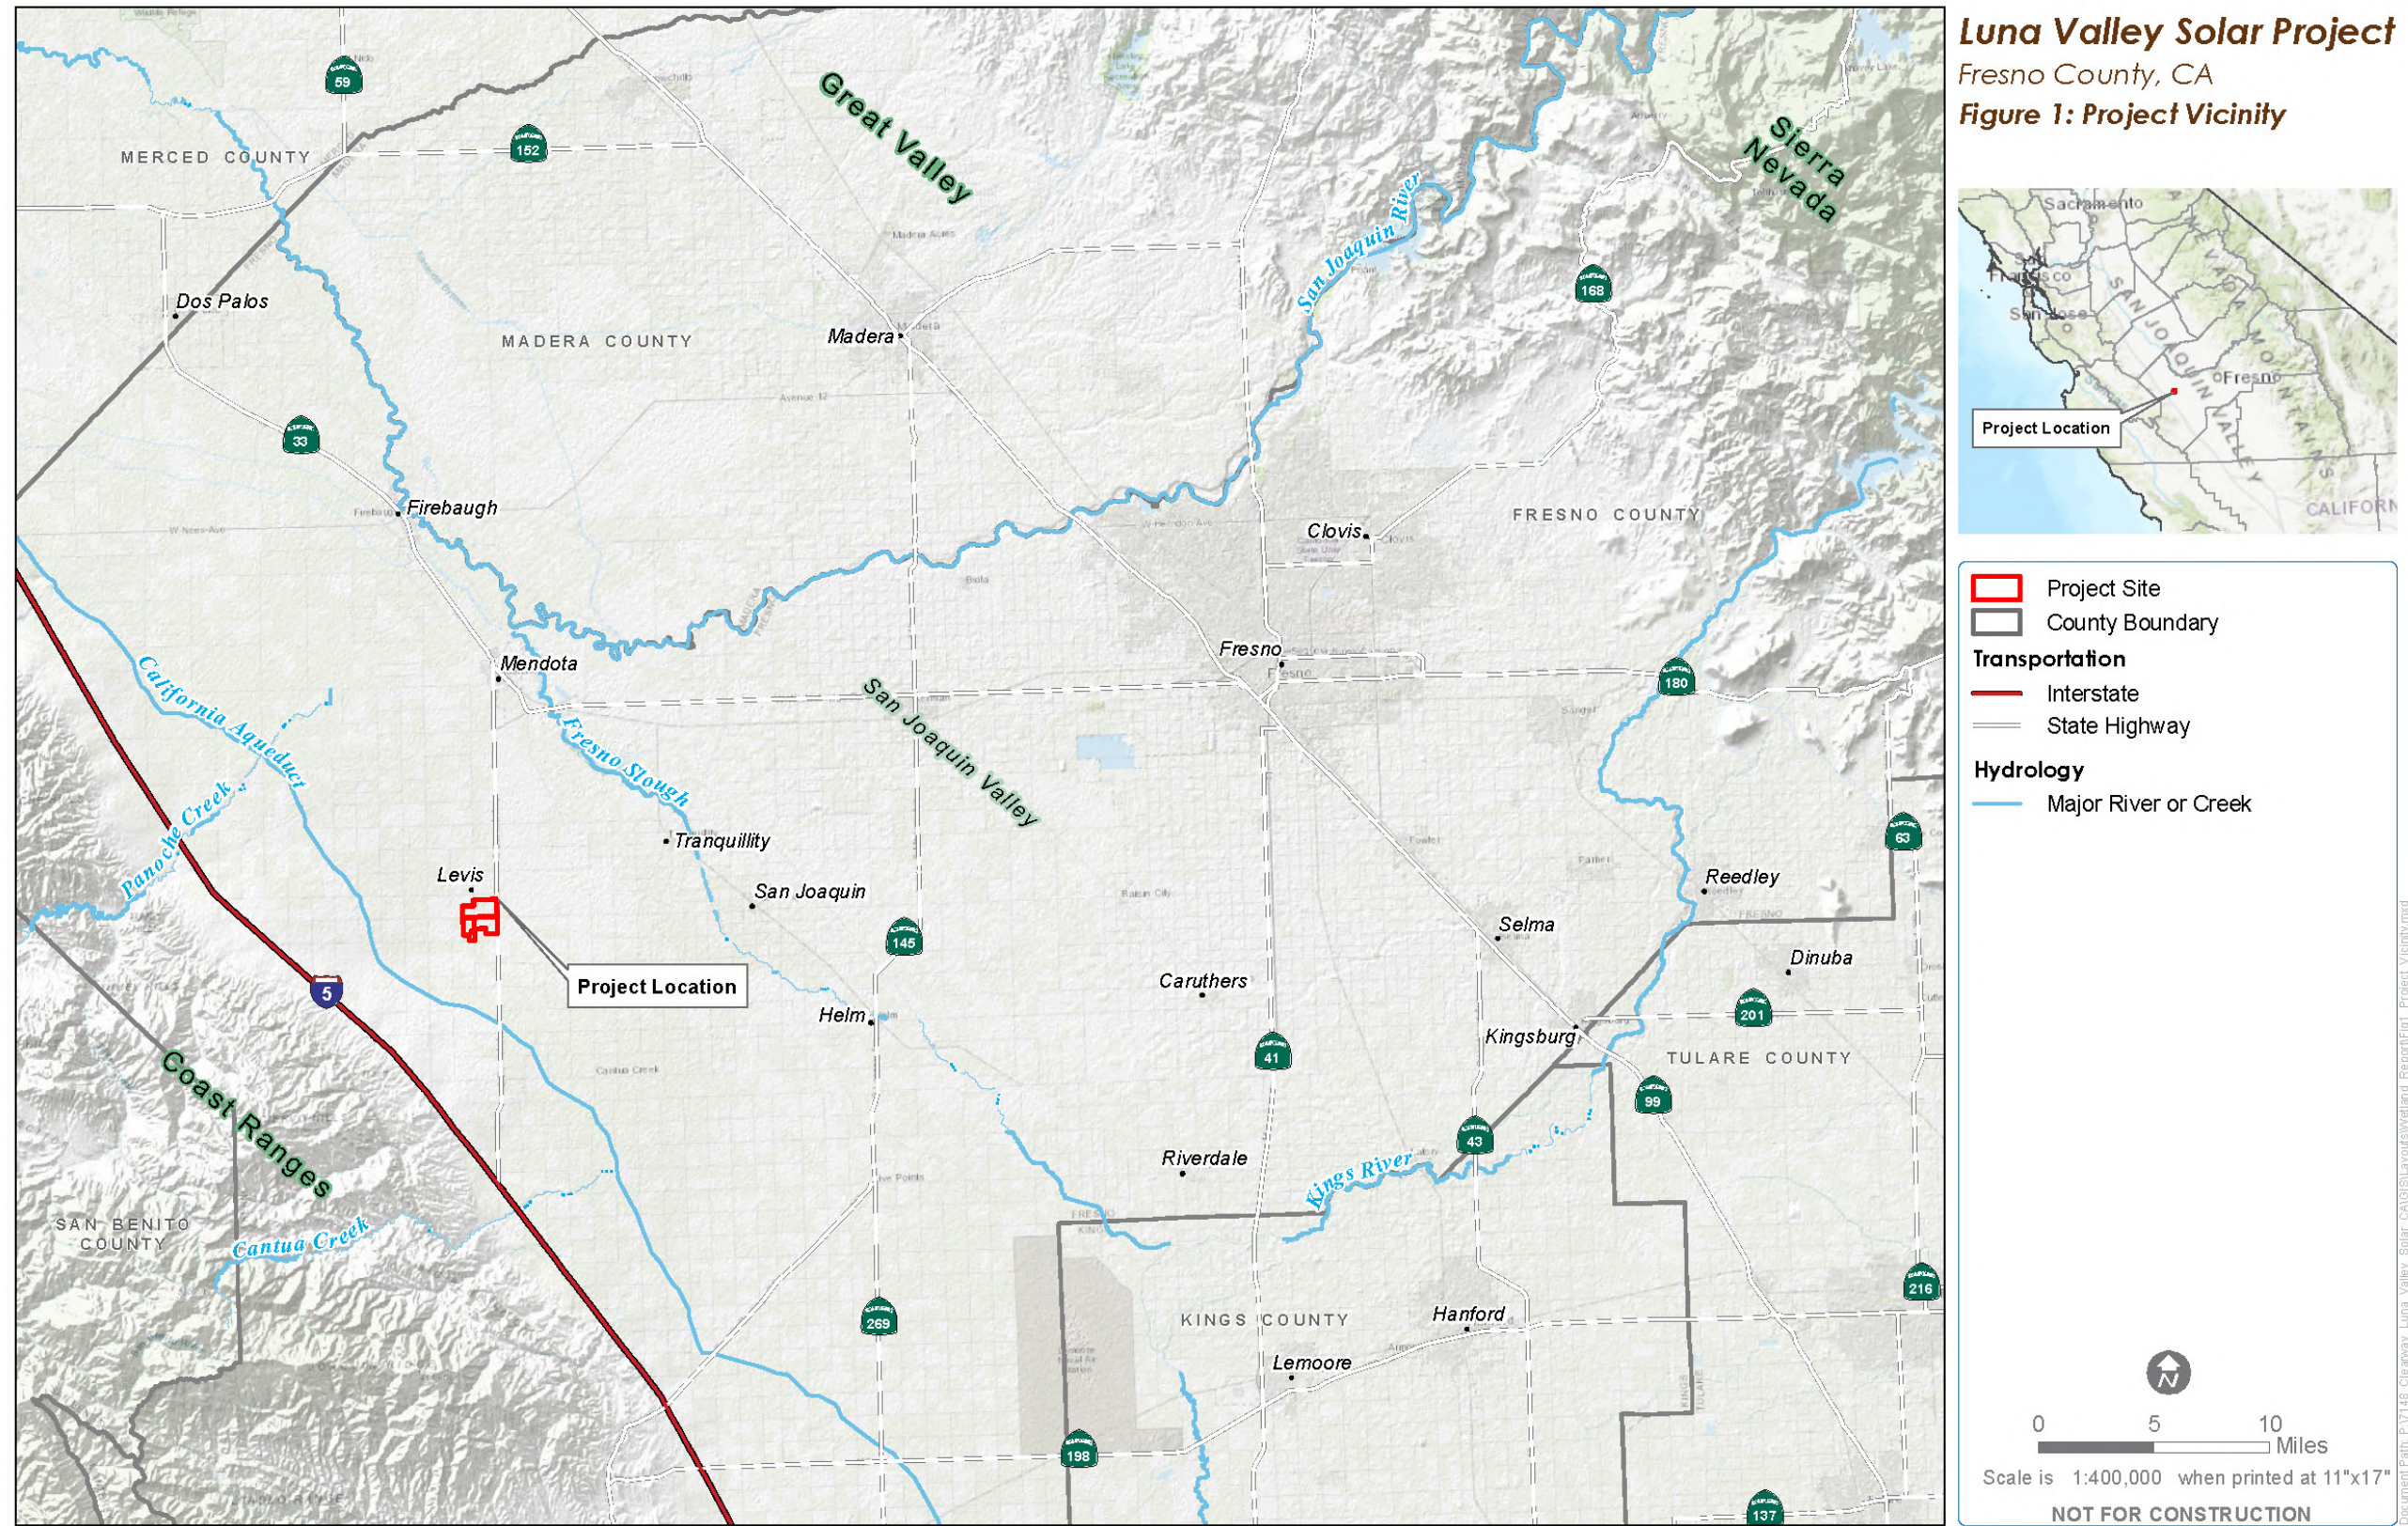

Tetra Tech, Inc. (Tetra Tech) prepared this jurisdictional delineation report for the proposed Luna Valley Solar Project (Project). Luna Valley Solar I, LLC (Project proponent) proposes to develop approximately 1,300 acres of land (Project site) located in the unincorporated community of Levis, Fresno County, California, for the development and operation of a photovoltaic solar energy facility (Figure 1).

The Project consists of constructing and operating a photovoltaic solar electricity generating facility, energy storage system, and associated infrastructure that would produce up to 200 megawatts of alternating current energy at the point of electrical grid interconnection. The Project would include the construction of solar arrays, electrical substation and interconnection facilities, energy storage system, operation and maintenance building, septic system and leach field, associated infrastructure such as control and data acquisition system, meteorological data system, buried and overhead wires/lines, and on-site access roads and security fencing. Construction is tentatively scheduled to begin in 2022 (start date is still to be determined) and last approximately 16 months. The facility would begin operation in 2023.

Tetra Tech conducted a literature review and a survey of the Project site and a 150-meter buffer zone (Figure 2). Biologists surveyed the Project site in 2020 and conducted a jurisdictional delineation on any potential jurisdictional wetlands and waters of the United States (U.S.). The results of the general biological survey are summarized in a separate report. This report focuses on the jurisdictional delineation methods and results.

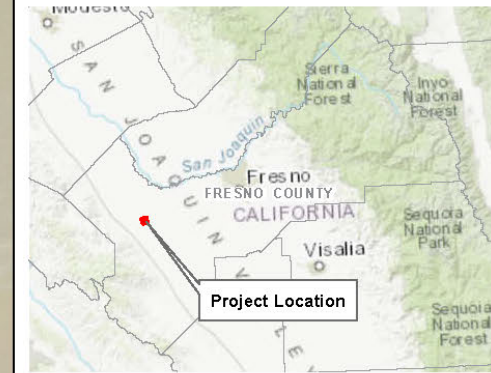

The purpose of this jurisdictional delineation report is to:

- Summarize methods and results of the delineation.
- Indicate jurisdictional areas covered under the United States Army Corps of Engineers (USACE), California Department of Fish and Wildlife (CDFW), and Regional Water Quality Control Board (RWQCB) criteria.
- Identify jurisdictional areas.
- Support the permit process, if the Project will impact jurisdictional areas.

Scale is 1:16,000 when printed at 11"x17"

NOT FOR CONSTRUCTION

2.0 ENVIRONMENTAL SETTING

The Project site is located on approximately 1,300 acres of privately-owned, undeveloped, agricultural land owned by the Westlands Water District in the rural community of Levis, Fresno County, California. The Project site is within the San Joaquin Valley, which is drained by the San Joaquin River (California Department of Conservation, California Geological Survey 2002). No primary or secondary tributaries are known to occur on or adjacent to the Project site. The Project site is flat and the elevational range is 185–215 feet above mean sea level.

The Project site has historically been used for dry-farmed (non-irrigated) agriculture (low-yield production of winter wheat, alfalfa, oats) and has been used for this purpose for the last 10 years. The Project site is entirely developed for agriculture. Agricultural land in the Project area has been documented to contain relatively high levels of selenium and a water table that does not provide enough drainage for commercially irrigated crops. During dry years with insufficient rainfall for crop production, Project parcels were fallow, or the land was grazed as rangeland grasses. Currently, some portions of the Project area lie fallow while most of the area is used for dryland farming to grow livestock fodder such as alfalfa.

3.0 REGULATORY OVERVIEW AND DEFINITIONS

3.1 U.S. ARMY CORPS OF ENGINEERS

Section 404 of the Clean Water Act provides the U.S. Environmental Protection Agency (EPA) and the USACE regulatory and permitting authority over activities that result in the discharge of dredged or fill material into “navigable Waters of the U.S.” Section 502(7) of the Clean Water Act defines navigable waters as “Waters of the U.S., including territorial seas.” Section 328 of Chapter 33 in the Code of Federal Regulations (CFR) defines the term Waters of the U.S. as it applies to the jurisdictional limits of the authority of the USACE under the Clean Water Act. A summary of this definition of Waters of the U.S. in 33 CFR Section 328.3 includes (1) waters which are currently used, or were used in the past for commerce, or may be susceptible to use in interstate or foreign commerce, including all waters subject to tides; (2) interstate waters and wetlands; (3) Waters of the U.S. such as intrastate lakes, rivers, streams, and wetlands; (4) impoundments of waters; (5) tributaries of waters; (6) territorial seas; and (7) wetlands adjacent to waters (Federal Register 1986). Therefore, for the purpose of determining USACE jurisdiction under the Clean Water Act, “navigable waters” as defined in the Clean Water Act are the same as Waters of the U.S. defined in the CFR above.

The limits of USACE jurisdiction under Section 404 as defined in 33 CFR Section 328.4 are as follows: (a) Territorial seas: three nautical miles in a seaward direction from the baseline; (b) Tidal waters of the U.S.: high tide line or to the limit of adjacent non-tidal waters; (c) Non-tidal waters of the U.S.: ordinary high water mark (OHWM) or to the limit of adjacent wetlands; (d) Wetlands: to the limit of the wetland.

3.1.1 Section 404 Jurisdictional Wetlands

The USACE has defined the term “wetlands” as follows (33 CFR 328.3):

Those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

The three parameters that are used to determine the presence of wetlands are: (1) hydrophytic vegetation, (2) wetland hydrology, and (3) hydric soils. Evidence of a minimum of one positive wetland indicator from each of the three parameters must be found in order to make a positive wetland delineation (USACE 2008).

3.1.1.1 Vegetation

Hydrophytic vegetation is defined as areas where the frequency and duration of inundation or soil saturation exerts a controlling influence on the plant species present. Plant species are assigned wetland indicator status according to the probability of their occurrence in a wetland. More than fifty percent of the dominant plant species must have a wetland indicator status to meet the hydrophytic vegetation criterion. The USACE has published the *Arid West 2016 Regional Wetland Plant List (2016)* which separates vascular plants into the following categories based on plant species frequency of occurrence in wetlands:

- Obligate Wetland (OBL). Occur almost always (estimated probability >99%) under natural conditions in wetlands.
- Facultative Wetland (FACW). Usually occur in wetlands (estimated probability 67-99%), but occasionally found in non-wetlands.

- Facultative (FAC). Equally likely to occur in wetlands or non-wetlands (estimated probability 34-66%).
- Facultative Upland (FACU). Usually occur in non-wetlands (estimated probability 67-99%), but occasionally found in wetlands (estimated probability 1-33%).
- Obligate Upland (UPL). Occur almost always (estimated probability greater than 99%) under natural conditions in non-wetlands.

The USACE considers OBL, FACW, and FAC species to be indicators of a wetland. An area is considered to have hydrophytic vegetation when greater than 50 percent of the dominant species in each vegetative stratum (tree, shrub, and herb) fall within these categories. Any species not listed (NL) in the USACE wetland plant list is assumed to be an upland species, almost never occurring in wetlands.

A secondary hydrophytic vegetation identifier is a prevalence index of 3.0 or less. The prevalence index is a weighted-average wetland indicator status of all plant species at the sample point, where each indicator status category is given a numeric code (OBL=1, FACW=2, FAC=3, FACU=4, and UPL=5) and weighting is by abundance (percent cover). This method is a more comprehensive analysis of the hydrophytic status of the community than one based on just a few dominant species. The prevalence index is used as a supplement to determine whether hydrophytic vegetation is present on sites where indicators of hydric soil and wetland hydrology are present, but the vegetation initially fails the dominance test.

3.1.1.2 Hydrology

Wetland hydrology is inundation or soil saturation with a frequency and duration long enough to cause the development of hydric soils and plant communities dominated by hydrophytic vegetation. If direct observation of wetland hydrology is not possible (as in seasonal wetlands), or records of wetland hydrology are not available (such as stream gauges), assessment of wetland hydrology is frequently supported by indicators, such as watermarks, surface soil cracks, sediment deposits, or a high water table.

OHWM is a line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding area.

3.1.1.3 Soils

Hydric soils are saturated or inundated for a sufficient duration during the growing season to develop anaerobic or reducing conditions that favor the growth and regeneration of hydrophytic vegetation. Field indicators of wetland soils include sulfidic odor, observations of ponding, inundation or saturation, dark (low chroma) soil colors, bright mottles (concentrations of oxidized minerals such as iron), or gleying, which indicates reducing conditions by a blue-grey color. Additional supporting information includes documentation of soil as hydric or reference to wet conditions in the local soil survey, both of which must be verified in the field.

Field indicators for hydric soils are particularly difficult to observe in sandy soils, which are often recently deposited soils of floodplains. These soils usually lack sufficient fines (clay and silt) and organic material to allow use of color as a reliable indicator of hydric soil. Hydric soil indicators in sandy soils include accumulations of organic matter, and organic pan.

3.1.2 Section 404 Jurisdictional Waters of the U.S.

Waters of the U.S. subject to the USACE jurisdiction include lakes, rivers, and perennial or intermittent streams. USACE jurisdiction of Waters of the U.S. in non-tidal areas extends to the OHWM, as defined

above. Waters of the U.S. are identified in the field by the presence of a defined river or streambed, a bank, and evidence of the flow of water, or by the abundance of emergent vegetation in ponds or lakes. Waters of the U.S. must also show evidence of a “significant nexus” to a traditionally navigable water or the territorial seas.

3.1.3 Areas Exempt from Section 404 Jurisdiction

On June 29, 2015, the Clean Water Rule was published in the Federal Register, which became effective in California in August 2018. On October 22, 2019, the EPA and the Department of the Army published a final rule to repeal the Clean Water Rule and restore the regulatory text that existed prior to the Clean Water Rule, which became effective on December 23, 2019. On April 21, 2020, the EPA and the Department of the Army published the Navigable Waters Protection Rule in the Federal Register to finalize a revised definition of Waters of the U.S. under the Clean Water Act. The definition was streamlined to include four categories of jurisdictional waters, provide exclusions for many water features that traditionally have not been regulated, and to define terms in the regulatory text. The Navigable Waters Protection Rule regulates navigable waters and the core tributary systems that provide perennial or intermittent flow into them. This final rule became effective on June 22, 2020.

Under the final Navigable Waters Protection Rule, four categories of waters are federally regulated:

- The territorial seas and traditional navigable waters.
- Perennial and intermittent tributaries to those waters.
- Certain lakes, ponds, and impoundments.
- Wetlands adjacent to jurisdictional waters.

The final rule details 12 categories of exclusions (i.e., features that are not Waters of the U.S.), such as features that only contain water in direct response to rainfall (e.g., ephemeral features), groundwater, many ditches, prior converted cropland, and waste treatment systems. The final rule also clarifies key elements related to the scope of Federal Clean Water Act jurisdiction, including:

- Providing clarity and consistency by removing the proposed separate categories for jurisdictional ditches and impoundments.
- Refining the proposed definition of “typical year,” which provides important regional and temporal flexibility and ensures jurisdiction is being accurately determined in times that are not too wet and not too dry.
- Defining “adjacent wetlands” as wetlands that are meaningfully connected to other jurisdictional waters, for example, by directly abutting or having regular surface water communication with jurisdictional waters.

3.2 REGIONAL WATER QUALITY CONTROL BOARD

The Dickey Water Pollution Act of 1949 and Porter-Cologne Water Quality Control Act of 1969 (Porter-Cologne) established the State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Boards (RWQCBs) in California. The SWRCB and each RWQCB regulate activities in Waters of the State which include Waters of the U.S. “Waters of the State” are defined by the Porter-Cologne Act as “any surface water or groundwater, including saline waters, within the boundaries of the state.”

The SWRCB/RWQCB regulates the “discharge of waste,” including discharges of fill and dredged material, into Waters of the State. All parties proposing to discharge waste that could affect Waters of the State must file a report of waste discharge with the appropriate RWQCB. The RWQCB will then respond to the report

of waste discharge by issuing waste discharge requirements (WDRs) in a public hearing, or by waiving WDRs (with or without conditions) for that proposed discharge.

Pursuant to Section 401 of the Clean Water Act, the SWRCB/RWQCB established the State Water Quality Certification Program. This program issues certifications for projects which propose to discharge fill or dredged material into Waters of the State. Water Quality Certification is necessary for all projects that require a USACE Section 404 permit, or fall under other federal jurisdiction, and have the potential to impact Waters of the State. A Water Quality Certification issued by the SWRCB/RWQCB certifies that project activities will not violate water quality standards individually or cumulatively over the term of the action. A Water Quality Certification must be consistent with the requirements of the Federal Clean Water Act, the California Environmental Quality Act, the California Endangered Species Act, and the Porter-Cologne Act.

If a proposed project or portion of a proposed project does not require a federal permit, but does involve dredge or fill activities that may result in a discharge to Waters of the State, the RWQCB has the option to regulate the dredge and fill activity under its state authority in the form of WDRs or Certification of WDRs. In these cases, a Water Quality Certification is not necessary under Section 401 of the Clean Water Act because federal jurisdiction does not apply.

The SWRCB has adopted the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (Procedures), which became effective on May 28, 2020 (SWRCB 2019). The Procedures consist of the following four components: (1) a statewide wetland definition; (2) a framework for determining if a feature that meets the wetland definition is a Water of the State; (3) wetland delineation procedures; and (4) supplemental procedures for application submittal, and the review and approval of Water Quality Certifications, WDRs, and waivers of WDRs for dredge or fill activities, including the *State Supplemental Dredge or Fill Guidelines* (Appendix A of the Procedures). The Procedures define an area as a wetland as follows: an area is a wetland if, under normal circumstances, (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation. This definition does not affect the meaning of Waters of the State as it pertains to SWRCB/RWQCB jurisdiction pursuant to the Porter-Cologne Act, nor does it modify the current authorities of the SWRCB/RWQCB to protect water quality.

The Procedures consider all natural wetlands, wetlands created by modification of Waters of the State, and wetlands that meet current or historic definitions of Waters of the U.S., to be Waters of the State. In addition, the Procedures considers artificial wetlands (i.e., wetlands that result from human activity) that meet specific criteria to be Waters of the State. The Procedures provide wetland delineation procedures by incorporating the established delineation procedures set forth by the USACE.

3.2.1 Waters of the State

The SWRCB and RWQCB have established a formal wetland definition and have developed a wetland delineation protocol, which incorporates the same delineation protocol set forth by the USACE (USACE 2008). However, contrary to the USACE wetland definition, the State's wetland delineation will also protect non-vegetated wetlands. The methods used to determine potential Waters of the State were the same as those described above for potential Section 404 jurisdiction.

3.2.2 Areas Exempt from State Jurisdiction

Unlike federal regulations, dredging, filling, or excavation within isolated wetlands and Waters of the U.S. constitutes a discharge to Waters of the State, and prospective discharges are required to submit a report of waste discharge to the RWQCB to comply with requirements of the Porter-Cologne Act. The wetland delineation method outlined by the USACE (USACE 2008) has been utilized to map wetlands subject to SWRCB and RWQCB jurisdiction.

Areas exempt from SWRCB/RWQCB jurisdiction include all artificial wetlands that are less than 1 acre in size and do not satisfy the following criteria: (1) created by modification of a surface Water of the State; (2) approved by an agency as compensatory mitigation for impacts to other Waters of the State, except where the approving agency explicitly identifies the mitigation as being of limited duration; (3) specifically identified in a water quality control plan as a wetland or other Water of the State; or (4) resulted from historic human activity, is not subject to ongoing operation and maintenance, and has become a relatively permanent part of the natural landscape. In addition, artificial wetlands greater than or equal to one acre in size are exempt from SWRCB/RWQCB jurisdiction if the artificial wetland was constructed, and is currently used and maintained, primarily for one or more of the following purposes: (1) industrial or municipal wastewater treatment or disposal; (2) settling of sediment; (3) detention, retention, infiltration, or treatment of stormwater runoff and other pollutants or runoff subject to regulation under a municipal, construction, or industrial stormwater permitting program; (4) treatment of surface waters; (5) agricultural crop irrigation or stock watering; (6) fire suppression; (7) industrial processing or cooling; (8) active surface mining – even if the site is managed for interim wetlands functions and values; (9) log storage; (10) treatment, storage, or distribution of recycled water; (11) maximizing groundwater recharge (this does not include wetlands that have incidental groundwater recharge benefits); or (12) fields flooded for rice growing.

3.3 CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE

The CDFW is responsible for conserving, protecting, and managing California's fish, wildlife, and native plant resources. Streams and lakes, as habitat for fish, wildlife, and native plant species, are subject to jurisdiction by CDFW under Sections 1600-1616 of the State Fish and Game Code. Fish and Game Code Section 1602 requires any person, state or local governmental agency, or public utility to notify CDFW before beginning any activity that will do one or more of the following: (1) substantially obstruct or divert the natural flow of a river, stream, or lake; (2) substantially change or use any material from the bed, channel, or bank of a river, stream, or lake; or (3) deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it can pass into a river, stream, or lake. These regulated activities require a 1602 Lake and Streambed Alteration Agreement from CDFW. Removal of riparian vegetation also requires a Section 1602 Lake and Streambed Alteration Agreement.

The Fish and Game Code, Sections 1600-1616, regulates activities that would alter the flow, bed, banks, channel, or associated riparian areas of a river, stream, or lake. CDFW jurisdiction over lakes and streams is to the top of bank, or edge of riparian vegetation as determined by edge of dripline, whichever is further (CDFW 1994).

4.0 JURISDICTIONAL DELINEATION METHODS

Prior to the field survey, a literature review was conducted to evaluate the potential jurisdictional areas within the Project site and a 150-meter buffer. Biologists reviewed the U.S. Geological Survey (USGS) 7.5-Minute Topographic Map *Levis* Quadrangle, aerial imagery (Google Earth®), historic imagery (Google Earth® and Historic Aerials by Netronline [Netronline 2020]), the National Wetlands Inventory (NWI) database (U.S. Fish and Wildlife Service 2020), and the United States Department of Agriculture (USDA) National Resources Conservation Service (NRCS) Web Soil Survey (2020).

A jurisdictional delineation was performed within the Project site on May 8 and 9, 2020. The delineation was conducted at potential jurisdictional areas identified during the general biological survey. The USACE has developed standard methods and data reporting forms contained in the *Interim Regional Supplement to the Corps of Engineering Wetland Delineation Manual: Arid West Region* (USACE 2008), a supplement to the *Corps of Engineers Wetland Delineation Manual* (Environmental Laboratory 1987), to determine the presence or absence of wetlands and Waters of the U.S. The procedures described in the *Interim Regional Supplement to the Corps of Engineering Wetland Delineation Manual: Arid West Region* were used to identify wetlands and Waters of the U.S. in the project site that are potentially subject to regulation under Section 404 of the Clean Water Act. This delineation methodology was also used to evaluate potential Waters of the State under RWQCB jurisdiction.

Sample points were taken to determine areas of potential jurisdiction and were mapped in the field using an Eos Arrow 100 Global Positioning System (GPS) receiver with sub-meter accuracy. Field indicators were examined, and wetland data reporting forms were used to record three parameters: hydrophytic vegetation, wetland hydrology, and hydric soils. Completed wetland data forms are provided in Appendix A. Photographs taken during the field survey are provided in Appendix B.

Plant species present and the presence or absence of hydrophytic vegetation was recorded. Hydrophytic vegetation was determined to be present if greater than 50 percent of the dominant species at the sample point were OBL, FACW, or FAC (USACE 2016). If the hydrophytic vegetation dominance test was not greater than 50 percent, then the prevalence index was conducted. If the prevalence index was less than or equal to 3.0 then the vegetation was considered hydrophytic.

Soil pits were excavated to a depth of 10-18 inches to examine soils for evidence of hydric indicators and to determine the extent of soil saturation at the sample points. Soil pit locations are synonymous with sample points and were chosen where one or more of the parameters appeared to change. The top 10-18 inches of the soil profile was examined for indicators of hydric soil. Hydric soils were determined based on the presence of one or more of the hydric soil indicators.

At each sample point, indicators of wetland hydrology were examined. Indicators for wetland hydrology include surface water, saturation, high water table, surface soil cracks, sediment deposits, oxidized rhizospheres along living roots, biotic crust, etc.

A sample point was considered to be within a USACE wetland if the area met all three wetland parameters. If one or more of these parameters was not met in a typical situation, the point was considered to not be within a USACE wetland.

The immediately surrounding areas of potential jurisdictional features were examined for an OHWM and a discernible significant nexus to a traditionally navigable water or the territorial seas.

5.0 RESULTS

5.1 LITERATURE REVIEW

The Project site and 150-meter buffer do not contain blue-line streams, which are broken or solid blue or purple lines on the USGS topographic map. Natural landforms, such as mountains, hills, canyons, and ridgelines, as well as riparian strip, drainages, and waterways are also absent. The Project site and 150-meter buffer do not contain NWI wetlands (USFWS 2020).

5.2 JURISDICTIONAL DELINEATION

Two potential jurisdictional areas were found within the Project site (Figures 3 and 4). Both of the areas are agricultural ditches. Hydric soils have not been previously documented at these areas (USDA NRCS 2020). Vegetation in the area was determined to be in the *Hirschfeldia incana* – *Salsola* sp. Herbaceous Semi-Natural Alliance during the general biological survey, which was dominated by Mediterranean hoary mustard (*Hirschfeldia incana*) and Russian thistle (*Salsola* sp.). A jurisdictional delineation was conducted at each area and the results are provided in Table 1.

Table 1. Jurisdictional Delineation Results

Sample Area	Sample Point	Hydrophytic Vegetation	Wetland Hydrology	Hydric Soil	Notes
Potential Wetland Area #1	W-1A	-	-	-	
	W-1B	-	Yes	-	Wetland hydrology was observed as oxidized rhizospheres along living roots (C3).
	UP-1A	-	-	-	
	UP-1B	-	-	-	
Potential Wetland Area #2	W-2	-	-	-	
	UP-2A	-	-	-	
	UP-2B	-	-	-	

Note: “-“ = criteria not met.

Based on the results of the jurisdictional delineation, it was determined that Potential Wetland Areas #1 and #2 do not meet the criteria for jurisdiction under the USACE, RWQCB, or CDFW. The results of the delineation in the context of the USACE, RWQCB, and CDFW are discussed in the sections below.

5.3 U.S. ARMY CORPS OF ENGINEERS

5.3.1 Section 404 Jurisdictional Wetlands

As shown in Table 1, no sample point met all three criteria required to be a USACE Section 404 wetland. Potential Wetland Areas #1 and #2 were isolated areas with no discernible OHWM. No USACE Section 404 wetlands were identified at the Project site. Data on vegetation, hydrology, and soils collected at the sample points during the delineation are provided on standard USACE wetland data forms in Appendix A. Sample points are shown in Figures 3 and 4.

5.3.2 Section 404 Jurisdictional Waters of the U.S.

Potential Wetland Areas #1 and #2 were isolated areas with no discernible OHWM, influent or effluent surface flow, or discernible significant nexus to a traditionally navigable water or the territorial seas. No USACE Section 404 Waters of the U.S. were identified within the Project site.

5.3.3 Areas Exempt from Section 404 Jurisdiction

No areas exempt from Section 404 jurisdiction were found within the Project site.

5.4 REGIONAL WATER QUALITY CONTROL BOARD

5.4.1 Waters of the State

Potential Wetland Areas #1 and #2 were isolated areas with no discernible OHWM. Although wetland hydrology was observed at Potential Wetland Area #1, no evidence of hydric soil was observed at either area. Therefore, the new State wetland definition was not met and no RWQCB Waters of the State were identified within the Project site.

5.4.2 Areas Exempt from State Jurisdiction

No areas exempt from RWQCB jurisdiction were identified within the Project site.

5.5 CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE

Potential Wetland Areas #1 and #2 were isolated areas that would not be considered a river, stream, or lake, do not support riparian vegetation, and do not have features including flow or a defined river/stream bed, bank, or channel. Therefore, no areas of CDFW jurisdiction under Sections 1600-1616 of the State Fish and Game Code were found within the Project site.

6.0 CONCLUSION

Based on the results of the jurisdictional delineation and literature review, the Project site does not contain any areas that are under USACE, RWQCB, and/or CDFW jurisdictions. Therefore, no impacts to jurisdictional areas would occur. Associated permits or agreements for impacts to Section 404 jurisdictional wetlands, Section 404 jurisdictional Waters of the U.S., RWQCB jurisdictional Waters of the State, or CDFW Sections 1600-1616 jurisdictional areas are not required. This report is subject to verification by the USACE.

REPORT SUMMARY

TOPIC	OVERVIEW STATEMENT
Project Description	The proposed site, located at approximately 36.6051°N and 120.4023°W, south of Mendota, California, covers approximately 1,290 acres and is planned to be developed as a photovoltaic (PV) solar power facility
Purpose and Scope	The scope of services includes development and delivery of a Stage1 report. This Stage1 provides a conceptual model of expected subsurface properties from a geotechnical and geologic perspective to aid in a preliminary assessment of the potential project challenges and risks. In addition, Stage1 provides preliminary concepts for site development, conceptual foundation design parameters, and construction considerations for the project.
Anticipated Pile Driving Design	<p>Development of the photovoltaic solar project can be considered feasible from a geotechnical engineering standpoint.</p> <p>Pile embedment depths of 6 to 10 feet are anticipated, but deeper pile embedment may be necessary in shallow and soft clays.</p>
Proposed Geotechnical Investigation	Geotechnical explorations and laboratory testing are recommended. Exploration and testing will help confirm the expected conditions, as well as delineate areas of concern related to areas of increased gravel and cobbles and corrosive soils. A preliminary scope can be prepared at your request.

PROPOSED PROJECT

DEVELOPMENT DESCRIPTION

- The proposed site, located at approximately 36.6051°N and 120.4023°W, south of Mendota, California, covers approximately 1,290 acres and is planned to be developed as a photovoltaic (PV) solar power facility.

APPROACH AND METHOD

This report provides an expectation of subsurface properties from a geotechnical engineering perspective. It is intended to assist in considering preliminary concepts for site development and foundation options for the project. It is also intended to provide a basis for a subsequent exploration program to confirm the expected conditions as necessary to develop plans for site improvement and solar panel installation. See [INFORMATION SOURCES](#) for a detailed list of sources used to generate this report.

A geotechnical engineer with local experience in the area of the planned project has formed an opinion of expected geotechnical conditions by reviewing the information as provided on the client portal and our historic data in the vicinity of the project. The opinion rendered by the geotechnical engineer also includes an estimate of the confidence in that opinion. Finally, based upon the planned project, the information available and the confidence in the estimation of expected geotechnical conditions, the engineer has developed a general plan for exploration that will be necessary to confirm the expectations. For more information about our approach and method, please see [METHODOLOGY AND LIMITATIONS](#).

EXISTING SETTING

GEOLOGIC SETTING

The site is located east of Interstate 5 in the San Joaquin Valley, a deep sediment filled basin in central California. This area is mapped as Quaternary-age alluvium which abuts to Eocene, Miocene, Pleistocene, and Pliocene aged loosely consolidated marine rocks.

SURFICIAL GEOLOGY

Based on the California Geological Survey State Geologic Map, the on-site soils at the project site is mapped within the following geological units:

- **Q: Alluvium** (Holocene to Pleistocene) – marine and nonmarine (continental) sedimentary rocks. Generally, consists of alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine but includes marine deposits near the coast.

BEDROCK GEOLOGY

Depth to bedrock at the site is unknown. Bedrock is not anticipated to be encountered at the depths impacted by potential site development.

FAULTING

The United States Geological Survey (USGS) Quaternary Fault and Fold Database of the United States published a report containing descriptions of a fault system approximately 6 miles southwest of the site called the Great Valley thrust fault system, Great Valley 11 section (Class A). The site does not appear to be located within an Alquist Priolo Fault zone.

USDA SOILS

The United States Department of Agriculture Natural Resources Conservation Service provides information on soils through its Web Soil Survey (WSS) website. According to the WSS the site is mapped with a variety of soil series. The USDA characterizes the mapped soils as having the following characteristics:

NRCS Soil Series	Approximate % of Siting Area	Corrosivity		Soil Classification		
		Concrete	Steel	% Silt & Clay	Liquid Limit	USCS
Ciervo clay, (461)	33.4	High	High	43.7/33.7	54	CH
Calfax clay loam (482)	38.5	High	High	33.3/38.4	41	CL
Tranquility clay (286)	28.1	High	High	51.7/33.2	65	CH

GROUNDWATER

NRCS Soil Survey mapping indicates depth to groundwater at 4 to 5 feet below ground surface. Groundwater levels during construction or at other times in the life of the structure may be higher or lower than the levels indicated during subsurface exploration. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project.

Based on our review of the California Department of Water Resources and GeoTracker well data, we anticipate groundwater to be encountered at depths ranging from 4 to 100 feet due to seasonal variation.

The site has not been previously mapped in FEMA’s Flood Map. NRCS Flood frequency maps indicate that occasional flooding is possible. “Occasional” flooding means that flooding occurs infrequently under normal weather conditions. The chance of flooding is 5 to 50 percent in any year.

HISTORICAL AERIAL IMAGES SUMMARY

LOCATION	DESCRIPTION
Site	1998-2018: The site is depicted as open, undeveloped land generally used for agriculture.

GEOLOGIC AND GEOTECHNICAL RISKS

HAZARD	PRESENT ON SITE?	COMMENTS
Shallow Groundwater	Yes	NRCS mapping and our historical projects indicate that shallow groundwater is present on site at depths as shallow as 4 feet.
Flooding	Yes	Site is mapped by the USDA Web Soil Survey as having an occasional flood frequency. Based on our experience on nearby projects, flooding depth and scour potential could be significant factors in solar array design. It is our opinion that a Civil Engineer should be engaged to assess potential scour depths.
Slope Failure	No	Although the site exhibits 25 feet of relief, slope failures are not anticipated to be an issue during site development. The site exhibits a consistent and gentle decline moving across the site to the northeast.
Subsidence - Pumping	Yes	The site is located in an area that has experienced moderate land subsidence. Further evaluation and review is recommended.
Subsidence – Mining	No	There are no publicly documented mines within the project site.
Subsidence – Caves/Karst	No	No known caves or karst topography are known to exist at the site.
Earthquake – Seismicity	Yes	This region of California is seismically active and moderate to severe seismic shaking on site should be anticipated.
Earthquake – Ground Rupture	No	Active faults are not mapped on the project site.
Liquefaction	No	Fine-grained, cohesive soils are anticipated on site; therefore, the potential for liquefaction is anticipated to be low.
Swelling/Shrinking Soil	Possible	NRCS mapping indicates that soils with a high expansive potential may be present on site; however, based on our experience, we do not anticipate expansive soils.
Hydro-Collapse Settlement	No	Deposits of soft, loose, granular soils that would result in excessive hydro-collapse settlement are not anticipated to be encountered at this site.
Seiche, Tsunami	No	The site is located a significant distance away from large water body sources. Therefore, hazards associated with Seiches and Tsunamis are anticipated to be low.
Corrosive Soil	Yes	Based on our experience in the area, moderate to high steel corrosion is estimated for the site.
Man-Made Ground	No	Areas of significant fill placement do not appear to exist.
Volcanic Activity	No	The site is not in a known region of potential volcanic activity.
Quick Clay	No	Sensitive clays are not anticipated at the site.
Frost Action	No	Frost is not a concern in this region.

GEOLOGIC AND GEOTECHNICAL HAZARD MITIGATION RECOMMENDATIONS

HAZARD	LIKELIHOOD	POTENTIALLY FATAL FLAW	SIGNIFICANCE	POTENTIAL MITIGATION MEASURES	RECOMMENDED NEXT STEPS
Shallow Rock	Low	No	Difficult pile driving conditions	Shallow rock is not a concern for this site	None
Shallow cobbles, boulders, or dense cemented soils	Low	No	Difficult pile driving conditions	Cobbles and boulders are not anticipated to be a concern at this site	None
Shrink-Swell	Moderate	Possibly	Potential vertical rise of foundation and roadway subgrade; Potential risk of cracking to structures	Fine-grained soils associated with shrink-swell conditions are anticipated to be encountered on site	Obtain shallow surface samples for laboratory testing to evaluate shrink-swell potential
Collapse Potential	Low	Possibly	Sudden reduction in subgrade support when water is introduced to soils; High risk for ancillary structures supported on mat foundations	Overexcavate and recompact soils beneath inverters, transformers or other equipment supported on shallow concrete mat foundations	Perform borings with ring sample collection for laboratory testing to evaluate collapse potential
Seismicity	High	Possibly	Damage to infrastructure through inertial effects and ground displacements	Account for seismic loads in design	None
Faulting	Low	Possibly	Ground displacements/offsets	Geologic mapping indicates that no active faults are mapped within the project site	Perform a geologic reconnaissance to confirm that no faults are present
Liquefaction	Low to Moderate	Possibly	Loss of bearing capacity of foundation elements and liquefaction-induced settlement	Ground improvement, reconfigure to avoid liquefiable areas, use of mat foundations for building(s), seismic ties to tie foundations together for building(s), and/or add geogrid to reinforce earth	Although liquefaction is not anticipated to be a concern on this site, we recommend that you perform a 50-foot boring within the substation along with laboratory testing to evaluate liquefaction hazard potential
Corrosive Soil	High	Possibly	Deterioration of foundation systems over time and shortened design life	Epoxy coating of rebar, concrete type/additives. Consult with Corrosion Engineer to assess design life and thickness of galvanization for pile design	Obtain shallow, surface samples for laboratory testing
Frost Action	Low	No	Potential uplift/heave of the support systems and roadways	Frost is not anticipated to be a concern at this site	N/A

SUMMARY OF FINDINGS

The provided opinions of subsurface conditions are very preliminary in nature. They must be validated with site-specific exploration and testing. This discussion is in no way intended for design, construction, or permitting purposes. In no case should the information or opinions provided in this report be utilized for final design. See **METHODOLOGY AND LIMITATIONS** for additional clarification regarding the limitations of the following opinions and methods used to derive these opinions.

CONFIDENCE ESTIMATE

We have used a weighted average approach, please refer to **METHODOLOGY AND LIMITATIONS**.

MODERATE	We examined 3 historical projects within a 2-mile radius.
MODERATE	Available public data is consistent with our local experience.
HIGH	Practitioner has local experience in excess of 20 years.

PILE DRIVING

CONSIDERATIONS	
Pile installation via conventional methods likely	Yes
Pile driving refusal anticipated	No
Anticipated pile embedment depths	6-10 feet, although deeper pile embedment may be necessary in shallow and soft clays.
Adfreeze stress based on frost heave	N/A
Potential expansive soil heave on piles:	Low
Seismic Site Class	E

FOUNDATION DESIGN SOIL PARAMETERS GUIDE OF ESTIMATES

A guide of estimates of the design engineering parameters for driven steel piles, for generalized subsurface conditions provided in tabular form below. These values should be used for general informational purposes only. They should not be used for project design.

Depth	Material Description (Consistency)	Cohesion (psf)	Ultimate Skin Resistance Uplift (psf)	Ultimate End Bearing Pressure (psf)
2-13 ft	Lean Clay (very soft to medium stiff)	250 to 500	250 to 450	2,000 to 3,000
13 -50 ft	Clays and Silts (stiff to very stiff)	1,500 to 2500	700 to 720	10,000 to 15,000

- For W-sections and other similar pile shapes, the box perimeter should be used to compute the actual area providing skin resistance to the applied loads, which will be less than the actual surface area of the pile.

EXPECTED LITHOLOGY

Area Represented: Entire Site

COMMENTS ON POTENTIAL VARIABILITY

- Expansive soils may be encountered in this area. However, in our experience in the area, due to relatively shallow groundwater there is not a lot of potential for expansive heave on the pile.
- NRCS soil survey mapping indicates depth to groundwater at 4 to 5 feet below ground surface. In our experience in the area and onsite well data, groundwater depths from 4 to 100 feet are possible due to seasonal variation.
- Loose and/or unstable soils may be encountered and require additional undercutting.
- The Site is located in the Pacific Border Physiographic Province of California. The Site is mapped within the Quaternary alluvium Geologic Formations, which consist primarily of Pliocene to Holocene alluvial and terrace deposits.
- Surficial geologic conditions consist of clays, silts, and sands. This unit is described as unconsolidated to semi-consolidated material which includes alluvial fan and terrace deposits and along large drainages, sand, silt and clay on alluvial plains.

The **EXPECTED LITHOLOGY** was prepared as a part of this Stage1 report. It should not be utilized or distributed outside of this report. **COMMENTS** include, but are not limited to, potential variability of geology, lithology, and groundwater as noted.

NEXT STEPS

GEOTECHNICAL

We recommend geotechnical explorations to characterize the subsurface conditions of the site. Geotechnical explorations will provide the necessary sampling and testing to provide design parameter recommendations. The locations of our planned geotechnical explorations will be provided when a site plan is available.

- Based on our experience within proximity to the project site, we recommend that the geotechnical explorations on site include the following (assuming array covers approximately 1,290 acres):
 - Borings with associated standard penetration tests (SPT) within the array field to depths of about 20 feet (about 1 per 25 acres of development)
 - Field electrical resistivity tests (about 1 per 50 acres of development)
 - Pairs of sacrificial load test piles to determine axial tension and lateral pile capacity (about 1 test location per 50 acres of development). Compression load tests can be included as requested or needed for design considerations.
 - At least one boring should be carried to a depth of 50 feet to evaluate the potential for liquefaction.

The actual depth of the exploration, as well as the location and frequency should be developed after the design team has developed a preliminary grading/site plan. The suggested ratios apply to the footprint of the array area, so if other constraints exist (wetlands, floodplains, etc.) that limit the overall developable acreage, the number of explorations would be reduced. The nature of subsurface variability will affect what we ultimately recommend for final design frequency.

- Infiltration testing should be performed in accordance with local specifications if stormwater facilities are required as a part of the development.
- Laboratory testing of the soils obtained during field exploration may include:
 - Moisture contents
 - Atterberg limits
 - Sieve analysis
 - Unconfined compressive strength
 - Corrosion testing (pH value, sulfate, chloride, sulfide, total salt, box electrical resistivity, and redox potential) of on-site soils: 1 test per 50 acres of development
 - Consolidation/Collapse
 - Thermal resistivity: 1 test per 100 acres of development
- We recommend completing a Phase I ESA for the site if one has not already been performed.

INFORMATION SOURCES

<p>TERRACON DATA</p>	<p>Terracon has 4 historical geotechnical projects within 3-miles of your project site. Of those, the local practitioner reviewed select exploration projects to gain a better understanding of potential subsurface conditions. The geotechnical project locations are illustrated on the Client Portal.</p>
<p>PUBLICLY AVAILABLE GIS DATA</p>	<p>California Geological Survey</p>
<p>AERIAL IMAGERY</p>	<p>Terracon reviewed the following readily available historical aerial images to develop a limited history of previous site usage:</p> <p>Historical Aerial Images Google Earth Pro™</p> <p>The use of available aerial imagery resources is intended to help understand previous site usage. These images are widely spaced in time. They should not be considered appropriate for identifying site activities which may have impacted subsurface conditions. A more comprehensive review of aerial imagery and/or site interviews would be required to further evaluate previous site usage.</p>

METHODOLOGY AND LIMITATIONS

LIMITATIONS

This report provides very preliminary opinions of siting and construction challenges that may be associated with the stated project plans for the stated property. Confirmation of opinions stated in this document is essential. Absence of a mapped resource does not mean that it is not present. Confirmation should include performing a site-specific evaluation consistent with the guidelines set forth in **NEXT STEPS**.

All parties are advised that any decisions or actions taken by any party based on the information contained herein, including decisions with financial implications are done solely at the risk of that party. By providing this information in this preliminary form, Terracon expressly disclaims any duties or obligations associated with the usage of this information for decision-making or design purposes.

In the event that changes to the nature, design, or location of the project, as outlined in this report, are planned, the preliminary conclusions and recommendations contained in this report shall not be used unless Terracon reviews the changes and either verifies or modifies the conclusions of this report in writing. In the event the project moves into the design phase, Terracon should be retained to develop and complete a scope of work that includes site specific explorations as noted in **NEXT STEPS**.

Terracon and Clearway Energy Group LLC recognize we have entered into an agreement that may contain certain confidential or non-disclosure obligations relating to our services. Clearway Energy Group LLC recognizes, however, that although such confidentiality obligations may be in place, those obligations do not create an exclusive relationship between the parties nor do those obligations create an exclusive ownership right to Clearway Energy Group LLC relating to the data in question. Terracon has the unfettered ability to provide similar services to any other party and use any public or previously available data for the service of others, even if included as part of this report, but Terracon will refrain from disclosing confidential information of Clearway Energy Group LLC which is provided by Clearway Energy Group LLC to the extent required by any applicable non-disclosure agreement.

Terracon does not represent the imagery reviewed to be a complete historical record of previous site usage, nor does Terracon validate the accuracy and sufficiency of the public domain sources that have been utilized.

METHODOLOGY

CONFIDENCE ESTIMATE

Terracon has assigned confidence estimates for the datasets based on upon the engineer's local practice in the vicinity of your site. The engineer assigned a subjective confidence opinion of low, moderate, or high for each of the following categories:

- Historical Project Data
- Local Experience
- Public Data

Using a weighted averaging approach, we derived an overall confidence interval in which historical project data was weighted more heavily than local experience which was weighted more heavily than public data. Low confidence implies that the level of available data and/or consistency is such that little confidence can be placed in the Conceptual Geotechnical Model. Conversely, a high confidence ranking implies that sufficient data and consistency exists to derive a high confidence in the statement of expected conditions.

Regardless of the confidence ranking, actual conditions may vary significantly from the predicted conditions, and the expected conditions must be confirmed with site-specific exploration data, and significant variations from the expected conditions are possible.

Paleontological Resources Assessment

Administrative Draft

Technical Memorandum

Date: July 23, 2020
To: Aarty Joshi, Senior Manager, Environmental Permitting
Clearway Energy Group
From: Derrick Coleman, PhD, Senior Geomorphologist, Tetra Tech., Inc.
Re: Luna Valley Paleontological Resources, Fresno County, California

This Technical Memo evaluates the potential for paleontological resources (i.e., fossils) to occur at the proposed Luna Valley Solar Project (Project) site in Fresno County, California. It also provides recommendations for management options based on the sensitivity of such resources to disturbance from the proposed Project.

1.0 Introduction

Various activities related to construction have the potential to affect paleontological resources. These activities include grading, excavation, drilling, trenching or tunneling (generally any kind of surface-disturbing activities).

Tetra Tech examined known formations mapped within the Project site footprint and surrounding area, including formations at the surface and in the subsurface, and evaluated the likelihood that these formations could contain paleontological resources. The type of fossils associated with each formation is identified (where applicable). A framework is presented for evaluating paleontological resource sensitivity and applied to the appropriate formations with potential to be encountered.

1.1 Project Location and Setting

The Project is proposed for an area of agricultural land in unincorporated Fresno County, California. The nearest town is Tranquility, located approximately 9.0 miles east-northeast of the project site (see Figure 1). Interstate 5 and the California Aqueduct are located about 9.4 miles and 4.1 miles to the west, respectively. These two features are also located about 9.36 miles and 2.96 miles to the south of the project boundary, respectively. The cities of Mendota and San Joaquin are located 9.8 miles north and 10.9 miles east of Project area, respectively. The San Joaquin Airport is roughly 9.5 miles east of the Project area. Highway 33 (South Derrick Avenue) is the eastern boundary of the Project area, while the western edge of the Project area is along Los Angeles Avenue. The northern edge is approximately 1,400 ft. south of W. South Avenue, and the southern edge is approximately 1,300 ft. north of W. Dinuba Avenue. Running through the approximate middle of the Project area from east to west is W. Manning Avenue and the approximate middle of the Project area from north to south is S. Ohio Avenue. The Project site is entirely within the U.S. Geological Survey 7.5-minute topographic quadrangle of Levis. The Project area is located within Township 15 South, Range 14 East, and includes

Sections 23, 24, 25, and 26. The coordinates of the centroid of the Project are approximately latitude 36°36'12"N and longitude 120°24'05"W.

The Project area encompasses around 1,300 acres of privately-owned agricultural land in western Fresno County zoned as Exclusive Agriculture AE-20 under the Fresno County General Plan. This zoning is for agriculture only, and there is a 20-acre minimum parcel size. Within this zoning, the County permits utility-scale solar energy uses with an Unclassified Conditional-Use Permit (UCUP). The Applicant selected the Project site based on its previously disturbed nature and close proximity to electrical infrastructure and designed the Project in accordance with state and county regulations.

1.2 Project Description

The Applicant is proposing to construct and operate a photovoltaic (PV) solar power-generating facility of sufficient size and configuration to produce up to 200 MW (MW) of electricity at the Point of Interconnection (POI) in a cost-competitive manner. This project will assist California utilities meet their obligations under California's Renewable Portfolio Standard (RPS) Program and Senate Bill 100 (SB 100), to produce 60 percent of all electricity sold in California from renewable sources by the year 2030 and 100 percent by 2045. In addition, this location is in close proximity to transmission infrastructure (to minimize environmental impacts) and facilitate grid integration of intermittent and variable PV solar generation, and minimize line losses associated with off-site storage by collocating battery storage at the PV solar facility site.

The Project would include a PV solar energy generating facility, electricity power inverters and transformers or power conditioning stations, an on-site substation, battery energy storage system, and a connection to the PG&E-owned Tranquility substation. Other Project components include access roads, perimeter fences, telecommunications, a meteorological data collection system, signage, lighting, stormwater facilities, and an operations and maintenance building. Major Project features and their specific locations will be described in detail on the submitted Site Plan.

Construction. It is anticipated that construction would occur during a period of approximately 16 months. The onsite construction workforce would average approximately 150 and construction would occur primarily during daylight hours. Workers would reach the site using existing roads. Project construction would consist of two major stages: (1) site preparation, grading, and preparing staging areas and on-site access routes, and (2) assembling the trackers and constructing electrical interconnection facilities.

Operations. The Project would operate seven days per week and 365 days per year. The facility would be operated by Luna Valley Solar I, LLC or an affiliated company. Approximately four, permanent on-site staff are anticipated. Security would be maintained through installation of a chain-link fence, which would include one-foot of three-strand concertina wire along the perimeter of the site. Existing barbed wire fencing would be replaced with the Project perimeter fencing as needed. Infrared security cameras, motion detectors, and/or other similar technology may also be installed to allow for monitoring of the Project site through review of live, 24/7 footage.

Decommissioning. If operations at the site are terminated, the facility would be decommissioned. Most parts of the proposed system are recyclable. Panels typically consist of silicon, glass, and an aluminum frame. Tracking systems typically consist of steel and concrete, in addition to motors and control systems. All of these materials can be recycled.

2.0 Regulatory Context

Regulatory protection of paleontological resources has been promulgated at all levels. Although not all regulatory levels apply to this project, we summarize these requirements here.

2.1 Federal Regulations

Federal protection applies if the project overlaps or crosses federally owned or managed lands, or if a federal license, permit, approval or funding is required. The current Project boundary, including grid connection, does not cross federally owned or managed lands. It also does not depend on federal funding nor require a federal license or permit. Therefore, federal protection does not apply to this project.

2.2 State Regulations

California state regulations provide guidance with respect to paleontological resources under the California Environmental Quality Act (CEQA). Appendix G, Section V.c of the CEQA Guidelines requires that a project proponent determine whether the proposed project would directly or indirectly destroy a unique paleontological resource or site or a unique geological feature. Should an impact be established as significant, CEQA Guidelines require reasonable or feasible measures be applied to limit or minimize significant adverse impacts (State CEQA Guidelines § 15126.4). In addition, CEQA Guidelines (§15370) describe mitigation options to avoid, minimize, rectify, reduce (or even eliminate). or compensate for impacts to paleontological resources.

2.3 Regional/Local Regulations

The 2000 General Plan update for Fresno County protects paleontological resources under the Open Space and Conservation Element. This element seeks to identify, protect, and enhance Fresno County's important sites, including paleontological sites and their associated environment. The ultimate goal is to promote and encourage preservation, restoration, and rehabilitation of Fresno County's significant resources in order to promote awareness, community identify, and protect valuable natural assets of the County (Fresno County 2000).

According to the Fresno County General Plan Annual Progress Report for 2018 (Fresno County 2019), no ordinance has been developed to date for Historical, Cultural, and Geological Resources. All development projects are "referred to the State Historic Preservation Officer, the Fresno County Historical Landmarks and Records Advisory Commission and the Fresno County Historical Society for potential impact on significant . . . geological resources."

3.0 Project Environment

The Project site is situated more or less in the center of the southern portion of the central valley of California by latitude. It much closer to the western side of the valley than the eastern side, but is still located on the flat portion of this broad valley.

3.1 Physiographic Setting

The central valley of California is classified as the Great Valley geomorphic province. This province is a long (approximately 400 miles) and narrow (variable width that averages about 50 miles) lowland that has a central drainage outlet through Suisun Bay and then San Francisco Bay. The northern half of the province (the Sacramento Valley) and the southern half (the San Joaquin Valley) meet at the Sacramento-San Joaquin Delta, which is tidally influenced and therefore essentially at sea level. The San Joaquin Valley increases in elevation toward the south-southeast to approximately 200 feet above sea level near the Bakersfield end of the valley. The San Joaquin Valley axis near the project site is about 170 feet in elevation, and the elevation range within the project area is about 200 feet to 220 feet above sea level.

The San Joaquin Valley is bounded to the west by the Coast Ranges and to the east by the Sierra Nevada Mountains. The Great Valley geomorphic province is a mostly intact (i.e. not deformed) depositional basin, comprised predominantly of alluvial materials from the mountains on both sides of the valley. During the much of the Cenozoic era (present day to 66 million years ago) and the later part of the Mesozoic (66 million to 145 million years ago), the valley existed as a shallow marine embayment or other lowland. However, for a time in the Middle Tertiary period (about 12 million to 30 million years ago) the depositional environment was deeper water. In the late Cenozoic the San Joaquin Valley consisted of shallow brackish and freshwater lakes, including the now extinct Pleistocene-epoch Lake Corcoran (Norris and Webb, 1990).

3.2 Local Geology

The Great Valley is a depositional trough with an asymmetrical synclinal shape containing Mesozoic through Cenozoic aged sediments. These sediments are deposited on a granitic rock basement containing Franciscan (west side) the Sierran (east side) formations. The contact between the two basement formations is concealed underneath the Great Valley deposits. Even though it is not visible, it is presumed to be a subduction zone or fault-related contact. Much of the Great Valley had active tectonism throughout the Cenozoic, creating unconformities among sedimentary units. Deposition in the center of the Great Valley appears to provide an unbroken record through the Cenozoic. Along the margins of the Great Valley, deposition appears to have been frequently disrupted by tectonic activity and erosion (Norris and Web, 1990).

Geologic mapping of the western San Joaquin Valley region has been documented by a number of authors, including Bartow (1996) and Page (1986). The Project is located on the western side of the central San Joaquin Basin, a deep alluvial basin as described above. The map compiled by Jennings and Strand (1958) suggests the area surrounding project site contains two distinct geologic units, Quaternary fan deposits and Quaternary basin deposits. A more recent map produced by Dibble and Minch (2007) combines the fan and basin deposits into a single Quaternary alluvial deposits map unit. Bartow (1996) mapped the western border of the San Joaquin Valley, and called surficial units on the Valley floor younger alluvial fan deposits of Holocene age.

Based on the current geologic map of this part of the San Joaquin Valley, a Project geology map was prepared and is provided as Figure 2 (Jennings et al. 2013). As seen in Figure 2,

surface units in the Project site comprise 100% Pleistocene- to Holocene-aged alluvial deposits (unconsolidated sediments). Although these deposits are of unknown thickness, they are estimated to be at least 15 feet to 20 feet thick at the Project location. This is based on the distance from the valley edge (a minimum of 5 miles) as defined by the contact with the underlying unit of late Pleistocene age alluvial sediments, and lack of any surficial topographic features (other than flat surface). Therefore, the two geologic units with any potential to be encountered at the site are (1) Quaternary alluvium (Q) which comprises the surface at the Project site, and (2) Older alluvium (Qoa) which underlies the surface unit at depths greater than any expected excavations or drilled holes. The only older geologic units found at the surface near the Project site occur in the foothills to the west, southwest, and south of the project site. It is unlikely that any excavations required by Project development would be deep enough to reach the older alluvium (Qoa), and much less likely to encounter Pliocene or older geologic units that would underlie these Quaternary units. The combined thickness of geologic units in the San Joaquin Valley basin could be on the order of 3,600 feet, including units back to Mesozoic age (Page 1986).

Quaternary alluvium (Q) covers the entire Project footprint, and well over half the area shown on the Geology Map (Figure 2). This is equivalent to the unit Jennings and Strand (1958) called “fan and basin deposits” of the San Joaquin Valley. These sediments form an unconsolidated layer of sand, silt, clay and gravel that covers extensive areas of the San Joaquin Valley.

Pleistocene alluvium (Qoa) are slightly older sediments also derived from continental rocks and deposited into both non-marine and marine water environments. Surface occurrences of this unit can be found about 5 miles to the southwest of the Project location at their closest location. This unit is not well-studied in the western side and has a limited publication record, mostly in northeast San Joaquin Valley, describing sediments derived from the Sierra Nevada mountains on the eastern side of the valley (Marchand and Allwardt, 1981).

4.0 Paleontological Resources

Since paleontological resources are limited and nonrenewable, and provide scientific and educational value, they are protected under both state (CEQA) and County laws and regulations. The evaluation of paleontological resources by this Technical Memorandum satisfies CEQA and follows guidelines of significance criteria specified by the U.S. Bureau of Land Management (BLM) in their Paleontological Fossil Yield Classification (PFYC) system (BLM 2016).

Surface and subsurface geologic units in the project vicinity were identified through a review of select published maps and literature. Geologic units provide an indication of paleontological sensitivity and the potential for impacting to non-renewable paleontological resources by project development. The reviewed literature and maps included Bartow (1996), Dibblee and Minch (2007), Israelsky (1951), Jennings and Strand (1958), Marchand and Allwardt (1981), Page (1983), and Woodring and Bramlette (1950).

4.1 Database Search

A records search was performed by the University of California Museum of Paleontology (UCMP) for records of fossil localities occurring within quaternary geologic units in Fresno County and parts of the San Joaquin Valley (Holroyd 2020). The record collection search objective was to identify known fossil localities in or near the Project site, or regionally within the identified geologic formation present at the project site. The searches performed covered all fossil types (vertebrate, invertebrate, plant, microfossils, and trace fossils).

Within the Project area no records of fossil localities were identified by the UCMP search. The only fossil site identified in the vicinity of the Project was approximately 6 miles to the northeast (UCMP locality D3158). This is an invertebrate fossil identified in the Pliocene-age San Joaquin Formation.

4.2 Resource Assessment

Based on known land histories and a cursory review of aerial imagery from 1998 through 2018, the Project site appears to consist of predominantly disturbed agricultural lands that have been under active cultivation for much of this period (and probably much longer, as irrigated farming began in the San Joaquin Valley in 1870). The aerial images show that the land does not maintain any natural vegetation and is relatively flat. The 7.5 Minute US Geological Survey “Levis” quadrangle map shows these sections have a slightly curved surface that slopes due east on the northern end (Sections 23 and 24) and turns to the northeast in the southern end of the site (Section 25). There are no solid bedrock surface exposures found within the Project site boundaries, so no pedestrian field surveys were deemed necessary nor performed.

4.3 Paleontological Resource Sensitivity

The classification of paleontological resources applied here follows the system developed by the BLM (2016) for use on public lands. The BLM system classifies geologic units into one of five broad categories (some with sub-classes) that have an increasing likelihood for containing paleontological resources that progress from Class 1 to Class 5 (i.e. PFYC-1 to PFYC-5, see Attachment 1). Rating the sensitivity of these geological formations was based on the record search, literature review, and professional judgement. Results of the analysis have been used to develop recommendations for this project.

Quaternary alluvium (Q). This geologic unit covers the entire Project footprint, and is estimated to be a minimum of 15 feet thick at this location in the San Joaquin Basin. The Pleistocene- to Holocene-aged sediments of this geologic unit are too young to contain scientifically significant paleontological resources and therefore are considered to have low paleontological sensitivity (PFYC-2).

Pleistocene alluvium (Qoa). These slightly older sediments are likely derived either from the coast range to the west, or from the Sierra Nevada mountains to the east of the valley. This unit is known to contain widely scattered and scientifically significant paleontological resources (Marchand and Allwardt, 1981). However, their significance, abundance, and

predictability is quite variable, so they are considered to have a moderate paleontological sensitivity (PFYC-3a).

5.0 Evaluation of Paleontological Resources

The geologic unit mapped at the surface within the project site is Quaternary alluvium (Q). These deposits are assessed as PFYC-2 (having low paleontological sensitivity) and therefore, have a low probability of containing fossils. The geologic unit that is stratigraphically below the surface unit is Pleistocene-aged sediments (Qoa) is assessed to having moderate paleontological sensitivity (PFYC-3a). This unit has contained fossils at other locations in the San Joaquin Valley, although their significance and predictability is variable.

Only the upper of these two units is likely to be impacted by Project activities, because excavations and other surface penetrating actions are not expected to be deep enough to reach the older unit. The younger Quaternary alluvium (Q) at the surface varies in thickness across the San Joaquin Basin, but is expected to be relatively thick (at least greater than 15 feet) in the project area based on the Project's location, topography, and the geologic mapping of Jennings and Strand (1958). Therefore, ground-disturbing activities associated with Project construction are unlikely to expose the more sensitive Pleistocene-aged alluvial deposits. As a result, Project development activities are not expected to impact scientifically significant paleontological resources.

6.0 Resource Protection

The case for protecting paleontological resources is well-founded. These resources are finite and nonrenewable. Fossils are important because they can provide significant information to advance our understanding of past environments, climates, species occurrence and diversity, and species response to climate change. These resources are vulnerable to impacts from ground-disturbing activities associated with development projects. Possible impacts to fossils and fossil sites due to development or other site-disturbing activities could thus result in a direct loss of scientific data or research potential. On-site construction activities associated with site development could impact previously undisturbed, and paleontologically rich geologic deposits, if present, and in that case, could destroy potentially significant paleontological resources.

However, potential impacts can be evaluated by (a) assessing the likelihood that important paleontological resources will be found within the development site, (b) considering whether protective measures are available and necessary. In response to the first part of this concern, we have established that the Holocene-aged sediments found at the surface within the project boundaries, are too young to contain any paleontological resources. These sediments are quite thick at the Project site, and project construction activity is not anticipated to reach a depth where underlying geologic units with higher paleontological sensitivity might be encountered.

6.1 Management Recommendations

The potential for encountering paleontological resources on the Project site is low. Although the geologic unit (Quaternary alluvium [Q]) found at the surface within the Project location is unlikely to contain sensitive paleontological resources, precautions can be taken in the event these resources are encountered, and the following proposed mitigation measures are recommended

to lessen the potential for impacting paleontological resources should they be inadvertently discovered:

- Paleontological Worker Education and Awareness Program (WEAP): Before starting construction activities, on-site personnel should be trained in basic recognition of fossils and appropriate procedures to notify management in order to engage a qualified paleontologist in the event that fossils are discovered during construction activities.
- Construction crews must be informed of the potential to find paleontological materials (fossils). If such resources, whether they are fossilized materials or sites, are unearthed while conducting construction activities for the Project, all construction work occurring within 100 feet of the find shall immediately stop. A qualified specialist, meeting the Secretary of the Interior's Professional Qualification Standards for the Society of Vertebrate Paleontology (SVP 2010), must be brought on-site to evaluate the significance of the find and determine if additional study is warranted. If the significance of the find under CEQA or California Public Resources Code, Section 21082 does not warrant such study, the qualified paleontologist may decide to just record the find and allow work to continue. If the discovery proves significant under CEQA, additional work will be prescribed, such as preparation of a paleontological treatment plan, testing, or data recovery.

Luna Valley Solar
 Fresno County, CA
Paleontology Technical Memorandum
Figure 2: Geology Map

Q: Marine and nonmarine (continental) sedimentary rocks (Pleistocene-Holocene) - Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.

Qoa: Marine and nonmarine (continental) sedimentary rocks (Pleistocene) - Older alluvium, lake, playa, and terrace deposits.

QPc: Nonmarine (continental) sedimentary rocks (Pleistocene-Holocene) - Pliocene and/or Pleistocene sandstone, shale, and gravel deposits; mostly loosely consolidated.

P: Marine sedimentary rocks (Pliocene) - Sandstone, siltstone, shale, and conglomerate; mostly moderately consolidated.

M: Marine sedimentary rocks (Miocene) - Sandstone, shale, siltstone, conglomerate, and breccia; moderately to well consolidated.

Mc: Marine sedimentary rocks (Miocene) - Sandstone, shale, siltstone, conglomerate, and breccia; moderately to well consolidated.

O: Marine sedimentary rocks (Oligocene) - Sandstone, shale, conglomerate; mostly well consolidated.

E: Marine sedimentary rocks (Eocene) - Shale, sandstone, conglomerate, minor limestone; mostly well consolidated.

Ep: Marine sedimentary rocks (Paleocene) - Sandstone, shale, and conglomerate; mostly well consolidated.

Ku: Marine sedimentary and metasedimentary rocks (Upper Cretaceous) - Upper Cretaceous sandstone, shale, and conglomerate.

Kl: Marine sedimentary and metasedimentary rocks (Lower Cretaceous) - Lower Cretaceous sandstone, shale, and conglomerate.

KJf: Marine sedimentary and metasedimentary rocks (Cretaceous-Jurassic) - Franciscan Complex: Cretaceous and Jurassic sandstone with smaller amounts of shale, chert, limestone, and conglomerate. Includes Franciscan melange, except where separated - see KJfm.

Mzv: Metavolcanic rocks (Mesozoic) - Undivided Mesozoic volcanic and metavolcanic rocks. Andesite and rhyolite flow rocks, greenstone, volcanic breccia and other pyroclastic rocks; in part strongly metamorphosed. Includes volcanic rocks of Franciscan Complex: basaltic pillow lava, diabase, greenstone, and minor pyroclastic rocks.

um: Plutonic rocks (Mesozoic) - Ultramafic rocks, mostly serpentine. Minor peridotite, gabbro, and diabase; chiefly Mesozoic.

Executive Summary

ERM-West, Inc. (ERM) conducted a Phase I Environmental Site Assessment (ESA) of the Luna Valley Solar Project Site located south of the unincorporated community of Levi, Fresno County, California (the “Site” or “Subject Property”). The Phase I ESA was conducted in accordance with the scope and limitations of ASTM International Standard E2247-16 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for Forestland or Rural Property* (“E2247-16”). Exceptions to, or deletions from, E2247-16 are described in Section 1.3.4 of this report. ASTM E2247-16 standards were used in conjunction with ASTM E2247-16, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* to the extent practical and applicable to complete the work and prepare this report.

The Site visit was performed on 4 January 2018 by ERM assessors Mr. Kevin Almestad and Ms. Natalie Bogan. The Site is primarily vacant agricultural land that is covered with grasses, weeds, and low brush along the roadways. Two paved roadways and unpaved roads are present on the Site. The Subject Property consists of approximately 1,240 acres of land located in the western portion of Fresno County. The Subject Property consists of 15 parcels owned by the Westlands Water District.

Improvements on the Subject Property include an underground water line access vault and pipeline access points in the central portion of the Site. An electrical transmission line crosses the southern tip of the Site. Small quantities of trash and debris are scattered throughout the margins of the Subject Property including plastic debris, car tires, a pile of tractor tires and rock/fill piles. The surrounding land use is primarily agricultural. Solar energy developments are located immediately south and abutting northeast of the Subject Property.

Historical research indicates that the Subject Property was predominantly undeveloped and/or agricultural land with no visible structures from the early 1900s through the present. The adjacent properties are depicted as undeveloped or agricultural land. No structures and/or dwellings appear on the topographic maps or aerial photographs of the Site. It appears that the Site was undeveloped land until the 1950s, when the entire Site was used for agriculture. The Site has generally remained in the same configuration, with the exception of some irrigation development in the 1970s.

ERM obtained Site information via an interview with the Site representative Mr. Israel Sanchez, a Resources Engineer with the Westlands Water District.

The Subject Property was not listed in the Site-specific environmental database report and no spill or release related listings were discovered within the ASTM search radii.

ERM has identified the following conclusions associated with the Site:

Summary of Identified Issues
ASTM E2247-16 Findings:
Recognized Environmental Conditions (RECs)¹
No RECs were identified in connection with the Subject Property.
Controlled Recognized Environmental Conditions (CRECs)¹
No CRECs were identified in connection with the Subject Property.
Historical Recognized Environmental Conditions (HRECs)¹
No HRECs were identified in connection with the Subject Property.
De Minimis Conditions
<i>Agricultural Chemicals:</i> The Subject Property has historically been used for agricultural purposes. Historical agricultural operations would typically have included the use of agricultural chemicals (e.g., pesticides, herbicides, and fertilizers). The potential presence of residual agricultural chemicals in soil or groundwater at the Site represents a <i>de minimis</i> condition.
<i>Solid Waste and Debris:</i> ERM observed small quantities of solid waste and debris throughout the margins of the Subject Property including: trash, rock piles, car tires and a pile of tractor tires that based on their nature and small quantities are considered a <i>de minimis</i> condition.

¹ Key ASTM definitions, including REC, CREC and HREC, are provided in Section 8

1. Introduction and Background

1.1 Purpose and Auditors

ERM completed a Phase I Environmental Site Assessment (ESA) and of the Luna Springs Solar Project Site located approximately 0.5 miles south of the unincorporated community of Levi in Fresno County, California (the “Subject Property” or the “Site”).

The Site visit was performed on 4 January 2018 by ERM assessors Mr. Kevin Almestad and Ms. Natalie Bogan. No Site representatives were available to accompany ERM during the Site visit. ERM obtained Site information via an interview with the Site representative Mr. Israel Sanchez, a Resources Engineer with the Westlands Water District.

1.2 Scope of Work

This environmental assessment was conducted in conformance with ERM’s proposal dated September 15, 2017 (ERM, 2017) and with the requirements of ASTM E2247-16. Exceptions to, or deletions from, E2247-16 are described in Section 1.3.4 of this report.

ERM sought to identify conditions indicative of the presence or likely presence of hazardous substances or petroleum products in, on, or at the properties: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. To this end, ERM sought to gather reasonably ascertainable information regarding: (1) current and past subject property uses and occupancies; (2) current and past uses of hazardous substances and petroleum products; (3) waste management and disposal activities; (4) current and past corrective actions and response activities at the subject property; and (5) properties adjoining or located nearby the subject property. The scope of the Phase I ESA is further detailed below.

The scope of this Phase I ESA included:

- An onsite inspection to evaluate current conditions and identify areas of potential concern;
- A review of the history of the Subject Property and its vicinity through interviews and a review of various historical sources;
- Observation of adjoining properties and properties in the local area to evaluate the potential for adverse environmental impact to the Subject Property;
- Interviews/research of local city/county, tribal, state, and federal records, including contracting of Environmental Data Resources, Inc. (EDR) to identify regulatory listings for the Site and regulatory-listed facilities in the vicinity of the Site, as required in the regulatory records review section of the ASTM E2247-16; and
- Interviews and/or requests for information from the User and Subject Property owner, as deemed appropriate by the Environmental Professional.

1.3 Limiting and Special Conditions

1.3.1 Limiting Conditions During the Site Visit

Due to the size and primarily undeveloped/partially vegetated nature of the Subject Property, ERM visually evaluated the Site from accessible points. The site visit was accomplished by driving access roads and trails that were abutting

and transecting the Subject Property and by direct observation of any unusual features noted during the visit. Based upon ERM's historical research and the primarily undeveloped nature of the Subject Property, this particular site-related limiting condition is not expected to represent a significant limitation to this assessment. The Site visit portion of the scope of work was performed according to the ASTM E2247-16 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for Forestland or Rural Property. No other limiting conditions were encountered during the Site visit.

1.3.2 Data Gaps

The following table summarizes the data gaps identified during the Site assessment.

Table 1-1 Data Gap Summary

Data Gap / Failure	Sources Consulted to Address Data Gap	Significance*
Per ASTM, past owners, operators, and occupants of the Subject Property who are likely to have material information regarding the potential for contamination at the Subject Property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. ERM was not able to interview past owners and/or operators at the Subject Property. Based on this, and based upon historical data collected from other sources, this data gap is not expected to impact the results of this assessment.	ERM reviewed historical maps and aerial photographs, prior reports, and the EDR report. In addition, ERM obtained owner questionnaires from the majority of the current parcel owners.	Non-significant

* "Significance" provides a qualitative indication of the implication of the identified data gap relative to the Environmental Professional's (EP's) ability to identify conditions indicative of releases or threatened releases to the Subject Property; the 'significance' of the data gaps are rated from low to high. "Non-significant" indicates that additional information to fill the data gaps is not likely to have a negative impact on ERM's conclusions presented in this report. "Significant" indicates that it is ERM's opinion that additional diligence or investigation (such as additional data review or physical sampling of environmental media) is required to address the data gap.

1.3.3 Significant Assumptions

No significant assumptions have been made.

1.3.4 Exceptions and Deletions to the ASTM Standard

ERM has not identified exceptions to, or deletions from the ASTM E2247-16 standard. The Site visit portion of the scope of work was performed according to the ASTM E2247-16 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for Forestland or Rural Property.

2. Physical Site Setting

2.1 Location

The SunPower Luna Valley Project Site located approximately 0.5 miles south of the unincorporated community of Levi in Fresno County, California. The general location of the Subject Property and the physiographic features of the surrounding area are shown on Figure 1, developed from the United States Geological Survey (USGS) topographic map of Levis, California dated 2012.

The Subject Property consists of approximately 1,200 acres of land located in the western portion of Fresno County. The Subject Property consists of 15 parcels, summarized in Table 2-1 below. The Subject Property was accessed from West Manning Avenue.

Table 2-1 – Subject Property Parcels

Assessor's Parcel Number (APN)	Parcel Acres	Condition/Use
028-060-34T	160.3	Vacant Agricultural Land
028-060-69ST	250.56	Vacant Agricultural Land
028-060-70ST	76.6	Vacant Agricultural Land
028-060-71ST	80.04	Vacant Agricultural Land
028-060-72ST	57.47	Vacant Agricultural Land
028-101-15ST	18.72	Vacant Agricultural Land
028-101-17ST	15.16	Vacant Agricultural Land
028-101-19ST	38.24	Vacant Agricultural Land
028-101-29ST	5.02	Vacant Agricultural Land
028-101-58ST	37.73	Vacant Agricultural Land
028-101-65ST	153.42	Vacant Agricultural Land
028-101-69ST	133.53	Vacant Agricultural Land
028-101-72ST	24.69	Vacant Agricultural Land
028-101-74ST	165.67	Vacant Agricultural Land
028-101-77ST	36.95	Vacant Agricultural Land

2.2 Topography and Hydrology

The Subject Property is located in the central portion of the Great Valley geomorphic province. The Great Valley geomorphic province is an alluvial plain approximately 50 miles wide and 400 miles long and is bounded by the Coast Ranges to the west and the Sierra Nevada Mountains to the east. The valley is filled with up to as much as 20,000 to 40,000 feet of alluvial sediment.

The Subject Property is located at an elevation of approximately 206 feet above mean sea level (AMSL), is generally flat, and slopes slightly to the southeast. Surface water at the Subject Property is expected to infiltrate into site soils.

According to flood zone and National Wetland Inventory (NWI) data presented in the EDR® Radius Map™ Report reviewed by ERM, the Subject Property is not located within delineated wetland areas, or the 100 or 500-year flood plains. Flood zone and NWI data were obtained by EDR from the Federal Emergency Management Agency (FEMA) and U.S. Fish and Wildlife Services, respectively.

2.3 Geology and Hydrogeology

The Site is located within the Levis quadrangle, which encompasses a portion of the San Joaquin Valley. Lithology underlying the site is primarily Pleistocene to Holocene age alluvial sedimentary.

According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) web soil survey data for the Fresno County area, the surface soils in the vicinity of the Subject Property are generally comprised of Tranquility clays, Ciervo clays and Calflax clays. Tranquility clay is described as somewhat poorly drained with low to moderately low infiltration rates. Ciervo and Calflax clays are described as moderately well drained with infiltration rates ranging from low to moderately low to moderately high, respectively.

According to the GeoTracker Groundwater Ambient Monitoring and Assessment Program (GAMA) lists seven private water supply wells and one federal United States Geological Survey (USGS) groundwater well within one mile of the Subject Property. No wells are mapped on the Site by EDR. According to the California Division of Oil, Gas and Geothermal Resources (DOGGR), the Site had an exploratory boring drilled by SWEPI, LP on 20 July 1950 and was plugged and abandoned that same year.

The Site-specific depth to groundwater data necessary to determine actual shallow groundwater flow direction for the Subject Property is not available, and as such, groundwater flow direction at the Subject Property cannot be accurately determined by ERM. It is expected that groundwater generally flows to the northeast following surface topography.

It is important to note that groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells.

3. Site Description, Operations & History

3.1 General Site Description

3.1.1 Real Estate Ownership Information

The Subject Property consists of 15 parcels identified by the Fresno County Assessor’s Parcel Numbers (APNs) summarized in Table 3-1. According to property records obtained from the Fresno County Assessor’s Office by EDR and from the Client, the Subject Property is owned by a single owner and zoned as described in Table 3-1 below.

Table 3-1 – Subject Property Parcels and Ownership

Assessor’s Parcel Number (APN)	Zoning	Owner
028-060-34T	Not Reported	Westlands Water District
028-060-69ST	Not Reported	Westlands Water District
028-060-70ST	Not Reported	Westlands Water District
028-060-71ST	Not Reported	Westlands Water District
028-060-72ST	Not Reported	Westlands Water District
028-101-15ST	Not Reported	Westlands Water District
028-101-17ST	Not Reported	Westlands Water District
028-101-19ST	Not Reported	Westlands Water District
028-101-29ST	Not Reported	Westlands Water District
028-101-58ST	Not Reported	Westlands Water District
028-101-65ST	Not Reported	Westlands Water District
028-101-69ST	Not Reported	Westlands Water District
028-101-72ST	Not Reported	Westlands Water District
028-101-74ST	Not Reported	Westlands Water District
028-101-77ST	Not Reported	Westlands Water District

3.1.2 Subject Property Layout

The Subject Property consists of 15 parcels totaling approximately 1,240 acres of land.

The Subject Property is comprised of primarily vacant land covered with dirt, grasses, and low brush along the roadways. No buildings were observed on the Subject Property during ERM's site visit. The Site is not fenced and access to the Subject Property is unrestricted. West Mannington Avenue and South Ohio Avenue are paved roadways that span the Site. Additionally, two unnamed dirt roadways span the Site.

During the site visit, ERM observed an underground water line access vault and concrete piping that appear to be associated with irrigation activities located along the north side of West Mannington Avenue. An electrical transmission line crosses the southern tip of the Site.

A temporary water storage tank trailer and a plastic, portable tank containing chelated zinc solution with EDTA fertilizer was located in the northwestern corner of the Site at the time of the Site visit.

One dirt pit is located in the central western portion of the Site, adjacent to the western-most dirt roadway that spans the Site. Additionally, a high power voltage line runs east to west along the southern Site boundary. ERM did not observe any indication of the boring drilled, plugged and abandoned by SWEPI, LP in 1950.

Miscellaneous small quantities of trash and debris were observed in isolated portions of the Subject Property including a pile of tractor tires, car tires, plastic debris and rock/fill piles. The general layout of the Subject Property is illustrated on Figure 2. Representative Site Photographs are provided in Appendix A.

3.2 Current Site Operations

The Subject Property consists of vacant agricultural land, with no current operations except for agriculture.

3.3 Historical Site Operations

3.3.1 Historical Summary

Historical research indicates that the Subject Property was predominantly undeveloped and/or agricultural land with no visible structures from the early 1900s through the present. The adjacent properties are depicted as undeveloped or agricultural land. No structures and/or dwellings appear on the topographic maps or aerial photographs of the Site. It appears that the Site was undeveloped land until the 1950s, when the entire Site was used for agriculture. The Site has generally remained in the same configuration, with the exception of some irrigation development in the 1970s.

ERM was unable to obtain completed owner/operator questionnaires.

3.3.2 Evaluation of Historical Information Sources

To determine past uses of the Subject Property and surrounding properties, ERM reviewed historical sources of information as outlined in the References section of this report (Section 7). Copies of pertinent historical sources are also appended.

Table 3-1 Historical Timeline

Timeframe	Discussion
1923 - 1948	According to the 1923, 1947 and 1948 topographic maps and the 1937 and 1946 aerial photographs, the Subject Property is primarily undeveloped on the western portion of the site and used for agriculture on the eastern portion of the Site.
1950 - 1960	According to the 1950 and 1960, the Site was developed as agricultural land. According to the California Division of Oil, Gas and Geothermal Resources (DOGGR), the Site had an exploratory boring by SWEPI, LP drilled on 20 July 1950 and was plugged and abandoned that same year. Aerial photographs do not depict any structure or well pad at this location.

Timeframe	Discussion
1971 - 2005	According to the 1971, 1981, 1998, 2005 and 2009 aerial photographs and the 1984 topographic maps, the Site is agricultural and relatively unchanged with the exception of the dirt area cleared for an irrigation development in the central portion of the Site.
2009 - 2012	Based on the 2009 and 2012 aerial photographs, the Site remained in the same general configuration with the dirt area that was formerly cleared appears overgrown.
Present	Observations made at the time of ERM's Site inspection are discussed throughout this report.

4. Site Environmental Operations & Regulatory Review

4.1 Hazardous Material Use and Storage

No hazardous materials were observed on the Subject Property at the time of the Site inspection.

4.1.1 *Underground Storage Tanks (USTs)*

No visual indication of the potential presence of USTs was noted by ERM during the Site visit. The EDR report obtained by ERM did not list USTs on or adjacent to the Subject Property.

4.1.2 *Aboveground Tanks (ASTs)*

A temporary water storage tank trailer and a plastic, portable AST containing chelated zinc solution with EDTA, a fertilizer, was located in the northwestern corner of the Site during the Site visit. The EDR report listed one AST on an adjacent property south of the Site that is discussed in more detail in section 5.4 of this report.

No evidence of a spill or release regarding these ASTs were observed at the time of the Site visit.

4.2 Waste Management

4.2.1 *Hazardous Waste*

No hazardous waste was observed at the Site during ERM's site visit. The Site is not listed as a hazardous waste generator in the federal and state records searched by EDR.

4.2.2 *Non-Hazardous Waste*

ERM observed evidence of small-scale illicit solid waste dumping including a pile of tractor tires, car tires and plastic debris and rock/fill piles on the Subject Property.

4.2.3 *Other Regulated Waste*

No other regulated waste was observed at the Site during ERM's site visit.

4.3 Water Supply, Wastewater and Storm Water

4.3.1 *Water Supply*

During the site visit ERM observed an underground irrigation pipe access vault along the north side of West Mannington Avenue; however, according to the Site representative, the Subject Property does not current receive water for irrigation.

4.3.2 *Wastewater*

No sources of wastewater were observed at the Site during ERM's site visit.

4.3.3 *Storm Water*

No storm water drains were observed at the Site during ERM'S site visit. Storm water is anticipated to infiltrate into Site soils.

4.4 **Air Emissions**

4.4.1 *Air Emissions Sources and Permitting*

No sources of air emissions were observed at the Site during ERM'S site visit.

4.5 **Polychlorinated Biphenyls (PCBs)**

ERM inspected the Subject Property for types of equipment that have been historically associated with the use of polychlorinated biphenyls (PCBs) as a dielectric fluid coolant and stabilizer. Some examples of the types of equipment that potentially contain PCBs or PCB-contaminated oil include electrical equipment such as transformers, capacitors, and high voltage liquid filled switches.

ERM did not observe any potentially PCB-containing equipment. No spills, leaks, or stains were observed on the Site.

4.6 **Asbestos-Containing Materials**

Asbestos was banned in most friable building materials (spray applied surfacing materials and thermal system insulation) in 1978, but the Occupational Safety and Health Administration (OSHA) deems spray applied surfacing materials, thermal system insulation materials, and vinyl flooring materials as "presumed asbestos-containing materials" (PACMs) if they are present in pre-1981 buildings (Title 29 of the Code of Federal Regulations, Parts 1910.1001 and 1926.1101).

ERM observed concrete irrigation piping along the roadways of the Subject Property. It is unclear when this concrete irrigation piping was first installed; however, if the irrigation piping is older than 1978, it has the potential to contain asbestos.

5. Surrounding Properties

5.1 Summary

Historical research indicates that the surrounding properties generally consisted of undeveloped and agricultural land. However, due to the scale of the aerial photographs it is difficult to discern small, specific details.

5.2 Current Surrounding Properties

Land use in the area of the Subject Property includes undeveloped, residential, agricultural, and light industrial. The adjoining properties and nearby land use, as observed by ERM at the time of the Site inspection, is as follows:

Table 5-2 *Current Surrounding Properties*

Direction	Discussion
North	The Subject Property is bordered to the north by agricultural land.
East	The Subject Property is bordered to the east by agricultural land, with the exception of a solar array development immediately northeast of the Site.
South	The Subject Property is bordered to the south by solar array developments and an electrical substation.
West	The Subject Property is bordered to the west by agricultural land.

5.3 Surrounding Properties Historical Summary

Historical research indicates that the land surrounding the Subject Property has also been generally undeveloped or agricultural land from at least the early 1900s through the present. An oil pumping station is first depicted in the 1920s approximately 0.5 miles north of the Subject Property. Beginning in the 1960s, several man-made water ponds appear in the vicinity of the Subject Property. Two solar power installations, an electrical substation and electrical transmission lines (running east-west) have been present to the south of the Subject Property beginning in the mid-2010s.

Access roadways are depicted throughout the surrounding area in all of the historical topographic maps and aerial photographs. Due to the scale of the historic aerial photographs it is difficult to discern specific details in the surrounding parcels.

ERM's review the EDR directory image report discovered no historical or current listed addresses in the vicinity of the Subject Property.

5.4 Adjoining Property Agency Review

In accordance with the scope of work, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from an onsite and/or offsite sources of concern has the potential to impact the Subject Property. The database abbreviations are provided in the site- specific environmental database report.

One site was identified in the EDR report, within the ASTM and/or EDR search radii from the Subject Property:

- CSI Electric (also listed as Recurrent Energy Tranquility, LLC), located at 9810 South Ohio Avenue and adjacent south of the Subject property, is listed on the Aboveground Petroleum Storage Tank Facilities (AST) database, Certified Unified Program Agency (CUPA) database and the Facility and Manifest Data (HAZNET) database. The listings are described below:
 - CUPA: This listing relates to the facility being a small hazardous materials handler.
 - AST: This listing relates to the presence of a petroleum aboveground storage tank. This is likely associated with the operations at the electrical substation adjacent south of the Site.
 - HAZNET: This listings relates to having hazardous wastes transported and disposed of off-site including less than 1 ton individually (and in total) of unspecified solvent mixture, waste oil and/or mixed oil and other organic solids.

None of the nearby facility listings are indicative of a spill or release and therefore it is unlikely that these listings will pose an impact to the Subject Property.

6. Conclusions

ERM has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E2247-16 of the Site (as defined in Section 1 of this report). Exceptions to, or deletions from, this practice are described in Section 1.3.4 of this report. This Phase I Environmental Site Assessment has revealed no evidence of recognized environmental conditions in connection with the property except for the following:

Summary of Identified Issues
ASTM E2247-16 Findings:
Recognized Environmental Conditions (RECs)²
No RECs were identified in connection with the Subject Property.
Controlled Recognized Environmental Conditions (CRECs)¹
No CRECs were identified in connection with the Subject Property.
Historical Recognized Environmental Conditions (HRECs)¹
No HRECs were identified in connection with the Subject Property.
De Minimis Issues
<i>Agricultural Pesticides and Herbicides:</i> The Subject Property has historically been used for agricultural purposes. Historical agricultural operations would typically have included the use of agricultural chemicals (e.g., pesticides, herbicides, and fertilizers). The potential presence of residual agricultural chemicals in soil or groundwater at the Site represents a <i>de minimis</i> condition.
<i>Solid Waste and Debris:</i> ERM observed small quantities of solid waste and debris throughout the margins of the Subject Property including: miscellaneous household trash, car tires and a pile of tractor tires that based on their nature and small quantities are considered a <i>de minimis</i> condition.

² Key ASTM definitions, including REC, CREC and HREC, are provided in Section 8

7. References

The following sources were used in conducting the Phase I Environmental Site Assessment detailed in this report. Where information obtained from these sources was determined to be useful by the Environmental Professional, it is summarized in the body of this report. Copies of prior environmental reports and other pertinent documents are appended.

8. Limitations and Other Considerations

8.1 General Limitations

There are a number of exclusions and limitations associated with this assessment. These are briefly outlined below:

- This report has been prepared by ERM exclusively for Client and may not be relied upon by any other recipient, person or entity (together, henceforth, “Other Recipient”) without ERM’s express, written permission. ERM makes no warranties or representations to any Other Recipient and has no obligation to advise any Other Recipient regarding changes to this report or changes in applicable laws and regulations subsequent to the date of this report. In receiving this report, any Other Recipient agrees that that (a) it will make no claim against ERM that relates in any way to this report, or the Other Recipient’s access to this report, and (b) to the fullest extent permitted by applicable law, Other Recipient hereby releases ERM from, and will defend and hold harmless ERM from and against, any claim, action, suit, damage, loss, award, liability, expense, cost, or fees including attorneys’ fees arising from or relating to any use or disclosure of the report or any portion thereof by Other Recipient or any third party to whom Other Recipient discloses the Report. Notwithstanding the foregoing, if requested, ERM will issue reliance letters allowing lenders or other interested parties to rely on the contents of this report, in accordance with ERM’s terms and conditions, for financing or other purposes.
- ERM is an environmental consulting firm, and as such, we make no representations regarding questions of legal or accounting interpretation. Consultation with an attorney and/or certified accountant should be made with respect to any legal or accounting matters, or items that require such interpretation, under any law, regulation or contract.
- ERM did not independently verify information on publicly available databases. Therefore our findings are accurate and complete only to the extent that information provided to ERM was itself accurate and complete.
- The conclusions presented in this report represent ERM’s professional judgment based on the information made available to us during the course of this assessment and are true and correct to the best of ERM’s knowledge as of the date of this report.
- No sampling or testing of soils, waters or other materials was included as part of this assessment. However, reference may have been made to previous testing and sampling, as appropriate.
- Unless otherwise stated within this report, ERM has assumed that the Site will continue to be used for current purposes. ERM’s assessment does not include provision for Site closure or change in land use, unless expressly stated above.
- State-specific regulations related to property transfer (or ownership changes) may apply to the proposed transaction. Costs related to compliance with these State requirements were not included in ERM’s Assessment.
- Unless otherwise stated, ERM assumes the User (as defined in E2247-16) is the Client.

8.2 ASTM Limitations

The innocent landowner, contiguous owner, and prospective purchaser defenses to liability under CERCLA require that a person acquiring property conduct an all appropriate inquiry with respect to the Site. ERM has conducted this environmental assessment in accordance with the standards for conducting an all appropriate inquiry set forth at 40 CFR Part 312. Those standards require the application of scientific principles and professional judgment to certain facts with resultant subjective interpretations and exercise of discretion. Professional judgments expressed herein are based on the facts currently available within the limits of the existing data, and data gaps identified herein, scope of work, budget, and schedule. Those standards also require that the client undertake certain additional inquiries. In addition, the liability defenses under CERCLA require, among several other things, that the client after the acquisition stop any continuing releases, prevent any future threatened releases and prevent or limit human, environmental or natural resource exposure to any hazardous substance released at the Site. Therefore, ERM makes no warranties, expressed or implied, including, without limitation, warranties as to merchantability or fitness for a particular purpose, including any warranty that this Phase I assessment will in fact qualify client for the innocent landowner, contiguous property owner or prospective purchaser defense to liability under CERCLA. ERM's assessment is limited strictly to identifying recognized environmental conditions associated with the Site. Results of this assessment are based upon the visual Site inspection of readily accessible areas of the Site conducted by ERM personnel, information from interviews with knowledgeable persons regarding the Site, information reviewed regarding historical uses, information provided by contacted regulatory agencies, and review of publicly available and practically reviewable information identifying current and historical uses of the property and surrounding properties. All conclusions and recommendations regarding the Site represent the professional opinions of the ERM personnel involved with the project, and the results of this report should not be considered a legal interpretation of existing environmental regulations. ERM assumes no responsibility or liability for errors in the public data utilized, statements from sources outside of ERM, or developments resulting from situations outside the scope of this project. We make no warranties, expressed or implied, including, without limitation, warranties as to merchantability or fitness for a particular purpose.

8.3 Other Considerations

8.3.1 *Environmental Database Search*

ERM contracted EDR to conduct a database search for agency records. The appended database report defines and summarizes the ASTM databases reviewed in the EDR report and notes if any listed facilities (including the Subject Property) were identified in the specified radius. The locations of the listed facilities identified in the EDR report were evaluated to determine which listed facilities were located within the ASTM specified search distance from the Subject Property boundary. Only those listed facilities worthy of further discussion are discussed within the applicable sections of this report and data on additional listed facilities is included in the appended EDR database report.

It should be noted that the computerized geocoding technology used in the database search is based on available census data and is only accurate to approximately ± 300 feet. The EDR report provides a list of unmapped facilities for which inadequate location information was provided. ERM has reviewed the list of "unmapped" listed facilities to determine if these listed facilities are within the study radius. If the "unmapped" listed facilities appeared likely to be within the search radius for a specific database, they are discussed in the applicable sections of this report.

Sites identified within the study radii were evaluated to determine if they are likely to have adversely impacted the Subject Property. The criteria used to evaluate the potential for adverse impact to the Subject Property include:

- Distance from the Subject Property;
- Expected depth and direction of groundwater and surface water flow;
- Geology and physical ground conditions;
- Expected storm water flow direction;

- The presence/absence of documented contaminant releases at the identified sites that have not been remedied to the satisfaction of regulators; and
- The current regulatory status of the listing.

The identification of a listed facility as potentially upgradient or downgradient is based on the expected direction of groundwater flow referenced in Section 2.3.

8.3.2 User Provided Information

ERM contacted the User with respect to the following information:

- An evaluation of the presence of Environmental Cleanup Liens for the Subject Property;
- Activity and Use Limitations such as engineering controls (e.g., slurry walls, caps) and land use restrictions or institutional controls (e.g., deed restrictions, covenants) that may be in place for the Subject Property;
- Specialized Knowledge that includes personal knowledge or experience related to the Subject Property or nearby properties based on professional experience or knowledge of the Subject Property;
- Fair Market Value to evaluate whether a purchase price is significantly below Fair Market Value;
- Obvious Indicators that involve past or present spills, stains, releases, cleanups on or near the Subject Property; and
- Common Knowledge about specific chemicals, possible contamination, or past use of the Subject Property and surrounding area.

Relevant information provided by the User is summarized under the appropriate headings of this report, and in the following table:

Table 7-1 User-Provided Information

User Request	Response
Environmental cleanup liens	The User is not aware of environmental liens currently recorded against the Site. User did not request that ERM perform an independent evaluation of environmental liens for the Site.
Activity and Use Limitations (AULs) and land use restrictions or institutional controls	The User is not aware of AULs and/or land use restrictions currently recorded against the Site.
Specialized knowledge	The User has no specialized knowledge of the Site other than what was provided to ERM as discussed under the relevant sections of this report. User provided ERM access and information obtained from the data room is summarized throughout this report. ERM is not aware of additional specialized knowledge for the Site.
Fair market value	The User is not aware of a devaluation of the purchase price or fair market value of the Site in association with environmental conditions at, on, or under the Site.
Obvious indicators that involve past or present spills, stains releases or cleanups	The User was not aware of any obvious indicators that involve past or present spills, stains, releases, or cleanups.
Common knowledge about specific chemicals, possible contamination, or past use	Information and documentation, including previous environmental investigations was provided to ERM in the form of access to an electronic database and is presented throughout this report in the relevant report sections and appendices.

8.4 Key ASTM Definitions

ASTM E2247-16 prescribes the following definitions:

Recognized Environmental Condition (REC): “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment...”

Controlled REC (CREC): “...a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)...”

Historical REC: “...a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria)...”

De minimis condition: “...a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies...”

Data gap: “...a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to Site reconnaissance (for example, an inability to conduct the Site visit), and interviews (for example, an inability to interview the key Site manager, regulatory officials, etc.)...”

Data failure: “...a failure to achieve the historical research objectives...even after reviewing the standard historical sources ... that are reasonably ascertainable and likely to be useful...”

User: “...the party seeking to use Practice E2247 to complete an environmental Site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The user has specific obligations for completing a successful application of this practice...”

9. Environmental Professional Certification

This Phase I Environmental Site Assessment was conducted by Mr. Kevin Almestad of ERM. Mr. Giorgio Molinario and Mr. Steve Williams reviewed the contents of this report. The professional qualifications for Mr. Almestad, Mr. Molinario and Mr. Williams are appended to this report. Mr. Molinario, and Mr. Williams meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and have prepared the following declaration and signed in accordance below.

- I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.
- I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Site Name:

Sunpower Luna Valley
Sunpower Luna Valley
Mendota, CA 93640
EDR Inquiry # 5140099.17

Client Name:

ERM - West, Inc.
1277 Treat Blvd
Walnut Creek, CA 94597
Contact: Kevin Almestad

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by ERM - West, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # D19D-41E4-B877
PO # NA
Project Sunpower Luna Valley

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results
Certification #: D19D-41E4-B877

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission to Make Copies

ERM - West, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY SEARCH RESULTS

The Target Property was identified in the following databases.

Page Numbers and Map Identifications refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page Numbers and Map Identifications refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State and tribal registered storage tank lists

AST: Aboveground Petroleum Storage Tank Facilities

A review of the AST list, as provided by EDR, has revealed that there is 1 AST site within approximately 0.25 miles of the requested target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/13/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: N/A
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 05/30/2018

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 05/18/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: 800-424-9346
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 05/30/2018
Number of Days to Update: 23	Next Scheduled EDR Contact: 07/30/2018
	Data Release Frequency: Quarterly

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/22/2018	Source: Drug Enforcement Administration

CA DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CA HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CA WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Kevin C. Almestad

Mr. Kevin Almestad is a Staff Scientist with ERM based in Walnut Creek, California. He works in the ERM Transaction Services (TS) practice performing environmental due diligence and related scopes of work for a variety of clients. His experience includes conducting Phase I Environmental Site Assessments and custom due diligence projects. He has also performed Phase II sampling, analysis, and remedial action monitoring at sites in Northern California.

Mr. Almestad has conducted and authored several Phase I and II environmental assessments for industrial clients, consultants, law firms, and power companies.

Fields of Competence

- Environmental Due Diligence
- Phase I Environmental Site Assessments
- Phase II Testing and Analysis
- Remedial Action Monitoring
- Data analysis and reporting

Education

- B.S. Earth Science, University of California, Santa Barbara, 2015

Languages

- English, native speaker
- Spanish, basic verbal and written

Key Industry Sectors

- Legal
- Power (Solar, Oil & Gas)
- Telecommunication
- Chemical/Pharmaceutical
- High Technology
- Manufacturing

Honors & Awards

- Kleinfelder Academic Scholarship Award, June 2010
- Dean's List, UC Santa Barbara, 2009-2010

Key Projects

Environmental Site Assessments (Phase I and II ESAs and Due Diligence). Staff Scientist

Assisted with numerous due diligence projects and Phase I Environmental Site Assessment (ESAs) for private and public clients. Representative projects have included:

- Writing numerous Phase I ESA Reports and for industrial, commercial, and residential sites across California.
- Performing desktop due diligence assessments of parcels and sites by reviewing regulatory agency databases and other site files.
- Reviewing and summarizing environmental reports for multiple sites in a multi-site portfolio.
- Performing Phase II ESAs including drilling and sampling to assess the presence of petroleum hydrocarbons, PCBs, volatile organic compounds, heavy metals, and agricultural chemicals in soil, soil gas, and groundwater.

Environmental Remedial Investigation and Action Monitoring Assessments.

Assisted in assessments related to the release of volatile organic chemicals to the environmental effectiveness of remedial actions.

Confidential Client, Vacaville, CA. Staff Scientist

Assisted in a Phase II ESA for a client interested in purchasing the property. The scope of work involved drilling and geologic logging, and sampling for petroleum hydrocarbons and heavy metals in soil and groundwater.

Confidential Client, Winters, CA. Staff Scientist

Performed a limited near-surface soil investigation including drilling, logging, and sampling of a former agricultural area of the site. Sampled for agricultural chemicals in order to demonstrate baseline conditions throughout the site.

Confidential Client, Lafayette, CA. Staff Scientist

Performed soil gas and groundwater sampling and analysis as part of a Site Characterization Workplan approved by the Regional Water Quality Control Board. The remedial monitoring event included the sampling of all wells on site to assess the residual presence of TCE following a pilot study consisting of the pneumatically enhanced injection of Zero-Valent Iron (ZVI) in order to break down TCE in the groundwater.

Confidential Client, Benicia, CA. Staff Scientist

Assisted in routine groundwater monitoring and a remedial action rebound evaluation. Groundwater monitoring included the collection of site-wide water level measurements to assess groundwater flow, and groundwater sampling to assess the residual presence and concentrations of volatile organic compounds in groundwater as part of a monitoring program approved by the Regional Water Quality Control Board. The rebound monitoring included sampling of select wells to assess the residual presence of potassium permanganate injected to break down TCE in the groundwater.

Confidential Client, Oakland, CA. Task Manager

Managed and performed groundwater sampling and analysis as part of a remedial design and implementation plan approved by the Alameda County Local Oversight Program and San Francisco Bay RWQCB. Wrote and compiled a quarterly monitoring report to assess the concentrations and trends of petroleum hydrocarbons and fuel constituents in groundwater.

ExxonMobil, Southern California. Staff Scientist

Organized and facilitated the transfer of environmental permits, licenses, certifications, and registrations for multiple petroleum pipeline terminals and lubrication facilities located in Southern California. Covered media included air, stormwater, and wastewater. Assisted in facilitating the transfer of ownership of active remediation sites and select non-environmental permits.

Confidential Client, California and Louisiana. Staff Scientist

Retrieved and organized environmental permits, licenses, certifications, and registrations for all client facilities located in California and Louisiana. Covered media included air, stormwater, wastewater, radiological sources, soil, and groundwater. Entered and organized environmental documents into a custom FTP tool for the client.

Giorgio Molinario

Mr. Giorgio Molinario has over 20 years of transaction due diligence, site investigation, permitting, and regulatory compliance experience. He is a Program Director in ERM's Due Diligence and Mergers and Acquisitions advisory practice and is based in San Francisco, California.

Mr. Molinario's project experience includes a wide range of due diligence projects including: Phase I and II ESAs, custom due diligence reports, and associated environmental compliance for individual facilities, multi-site portfolios, or entire companies. His experience includes due diligence and permitting for sites slated for development or redevelopment in the US and abroad. These include multiple utility scale solar plants across the US, redevelopment of former industrial plants, greenfield development of data centers, and large infrastructure projects such as the high speed rail corridor or airport expansion projects. .

He has managed hundreds of environmental projects integrating a range of environmental disciplines including environmental assessment, CEQA permitting and sustainability. He has extensive experience with Federal, State, and local environmental regulations, as well as international regulations.

Fields of Competence

- Environmental due diligence
- Regulatory compliance and permitting
- Site investigation and remediation

Education & Training

- M.A. Environmental Studies, Brown University (Thesis pending)
- B.Sc. Chemistry, Brown University, 1992
- 40 Hour OSHA HAZWOPER
- 8-hour OSHA HAZWOPER Supervisor
- 8-hour OSHA HAZWOPER Refresher (2017)

Key Projects

Environmental Due Diligence

Environmental Site Assessments (Phase I and II ESAs and Due Diligence). Project Manager.

Managed and assisted with numerous assessments for private and public clients. Conducted assessments for buyer and vendor sides, in the U.S. and abroad, including numerous fast-turnaround multi-site projects. Representative projects have included:

- Managed numerous Phase I and II ESAs and limited compliance audits of industrial, commercial, and residential sites or portfolios of sites across the U.S. and abroad.
- Managed several Phase I and II ESAs of proposed development sites in California incorporating environmental due diligence, lender-specific requirements, and incorporating additional data into California Environmental Quality Act (CEQA) reports.
- Managed due diligence assessments including Phase I and II ESAs of manufacturing facilities, technology and biopharmaceutical facilities, chemical plants, oil and gas sites, petroleum storage sites, datacenters, distribution facilities, and landfills.
- Performed due diligence assessments in the US, UK, Italy, France, Israel, and Dem. Rep. of Congo, and managed projects with due diligence in Mexico, Germany, China, Japan, Korea, Vietnam, Taiwan, and India.
- Managed assessments of right-of-way alignments including rail lines, utility corridors, midstream assets, and roads/highways.
- Managed several Brownfield site assessments including multi-parcel sites, former industrial sites, and tribal land.

Development-Related Due Diligence

Project Manager. Due Diligence- Phase I and II, and Environmental Compliance Review for Biopharma Facility Acquisition and Redevelopment. Merck. South San Francisco, California. Managed the due diligence of two existing temporary R&D facilities and a vacant, former industrial site slated for redevelopment into a research campus. Managed an expedited Phase II and agency interaction to assist redevelopment of the new campus. Managed a team performing EHS compliance and air permitting assistance at the two temporary facilities.

Project Manager. Environmental Due Diligence and Confidential Cost Scenarios, Power Plant, Confidential Power Client, San Francisco, California. Managed multiple phases of environmental site assessment in preparation for redevelopment of a deactivated power plant and former manufactured gas plant. Condensed over 20 years of environmental investigations into concise summaries and oversaw preparation of risk human health risk matrices. Prepared confidential remedial cost summaries and integrated them in a redevelopment scenario to assist client's negotiation. .

Project Manager, Pre-acquisition due diligence of two international data center sites, Confidential Client, 2014: Managed the pre-acquisition assessment of two highly confidential data center sites in Ireland and China for a global high technology firm based in Silicon Valley. Designed the due diligence to include local requirements, future permitting, and baseline Phase II site investigations. These expedited assessments required large local teams and integration with the client's datacenter design and permitting teams.

Task Manager, Pre-redevelopment Assessment, Former Oak Knoll Naval Medical Center, Confidential Client, Oakland, California. Reviewed and assessed existing environmental reports for this 180-acre navy hospital to prepare a remedial strategy and cost estimate for environmental remediation in support of redevelopment. Prepared an inventory of environmental issues and a probabilistic cost model to integrate environmental costs into the overall project financial model.

MacArthur Boulevard Redevelopment Environmental Site Assessment, City of Oakland/CalTrans, Oakland, California. Project Manager. Planned and managed the combined assessment of numerous parcels along MacArthur Boulevard to support the planned improvements and redevelopment. Managed the field assessment teams and the preparation of the combined report. Issued recommendations to the client for areas requiring a higher level of oversight during excavation and intrusive work.

Project Manager, Pre-Acquisition Due Diligence of Proposed Innovative Hydrogen Power Plant Site, Confidential Client, California, 2012: This proposed power plant included over 1,000 acres of buffer agricultural land and existing farm and industrial operations on the proposed footprint. Planned the site due diligence to include additional items required for the

power plant CEQA Application for Certification (AFC) including proposed linears. He authored the environmental due diligence reports and CEQA AFC sections under an aggressive project schedule. He negotiated with CEC staff on the level of reporting required pre-certification and planned additional assessment to be conducted as a condition of certification.

Pre-acquisition Phase I and Baseline Phase II Site Investigation of Proposed Power Plant Site, Confidential Client, Colusa, California. Project Manager. Conducted environmental due diligence meeting client and lender standards at a proposed power plant site prior to site acquisition. Managed the baseline site investigation consisting of soil and groundwater investigation. Integrated data collection with the CEQA Application for Certification (AFC) team including collection of additional surface water and groundwater data, and collaboration with the biological survey teams.

Task Manager, Pre-acquisition due diligence and environmental liability cost estimating for an underwater power cable project, Confidential Client, San Francisco, California. Conducted environmental site assessment on several alternate parcels identified for use as AC to DC converter stations at the cable terminus. Prepared standard due diligence reports, as well as a detailed remediation/liability cost estimates.

Task Manager, San Francisco International Airport Runway Safety Area CEQA/NEPA Permitting, San Francisco, CA, San Francisco International Airport: Managed the CEQA hazardous material portions of the Environmental Assessment (EA) and Initial Study (IS) for this Runway Safety Area project. He assisted the project team and client in evaluating contaminated sites that may pose significant impacts to the construction, and preparing strategies to address the impacts without impacting the project schedule.

U.S. EPA Region IX START Investigation and Response Contract. Program Manager/Group Manager. Managed the environmental investigation and response group during this contract that included over 150 task orders totaling over \$12M. In addition to managing the group, managed and performed a range of projects, including emergency responses, Brownfields site assessments, and expedited removals at CERCLA and petroleum sites. Site investigation projects included

several mining sites in California and Nevada with a wide range of contaminants.

M&A Due Diligence and Compliance

Project Manager, Due Diligence and Compliance Auditing of Alios Pharmaceutical Company by Johnson & Johnson, South San Francisco, California. Assessed the operations and R&D facilities of a pharmaceutical company slated for acquisition. Prepared a due diligence report for the acquisition and a detailed task list of EHS compliance issues to be addressed during post-acquisition integration. Assisted with post-acquisition EHS compliance integration and auditing.

Fluoropolymer and Fluorocarbon Manufacturer, Due Diligence and Strategic Acquisition Consulting. Senior Auditor. Senior Auditor for high-level due diligence and strategic acquisition consulting for the proposed acquisition of a 900 million dollar fluoropolymer and fluorocarbon manufacturing company with facilities in U.S., Italy, and Germany. Visited manufacturing plants and interviewed plant management, and senior environmental management to identify due diligence issues, potential for catastrophic failures from the storage of hydrofluoric acid, and future regulatory issues with the continued production of CFCs, HCFCs, and the use of mercury cells in the production of chlorine.

Environmental Due Diligence of a portion of the Black Mountain Industrial (BMI) Complex, Confidential Client, in Henderson, Nevada, Lead Assessor Assessed a portion of the BMI complex that has been used for basic chemical manufacturing since the 1940s. Prepared a concise due diligence report summarizing historical soil and groundwater impacts and potential impacts from current operations.

Environmental Due Diligence and Risk Review of LNG Plant and Pipeline, Osaka Gas/Chubu Electric, Freeport, Texas. Project Manager. Managed the due diligence and strategic investment consulting for Freeport LNG plant and associated 25 mile pipeline in Texas. Managed multiple field assessment teams and the review of permit and plant design issues identified as critical to successful future operation. Specialized staff conducted a peer review of explosion studies performed for the proposed addition of liquefaction trains to this facility. Mr. Molinaro authored the due diligence report

and coordinated communications with the clients, technical experts, and legal counsel.

Project Manager, International Aluminum, Due Diligence, Compliance, and Site Investigation and Remediation Consulting. Project Manager for the private equity acquisition of a vertically integrated industrial company. Managed resources from multiple offices to conduct expedited site audits. Prepared a probabilistic cost model for environmental liabilities that was used to select a basket of properties for securitized leaseback. Oversaw post-closing environmental compliance and site investigation and remediation tasks on multiple sites across the US and Canada, including closure of sites and permitting.

Project Manager, Pre-acquisition Due Diligence of Forest Product Equipment Manufacturer, Confidential Client, US and Canada, 2014. Managed the due diligence and compliance assessment of forest product machinery manufacturing company that included manufacturing facilities in the US and Canada and numerous legacy facilities. Managed technical staff from multiple offices to assess traditional soil and groundwater issues and the robustness of environmental and incident prevention programs.

Project Manager, 700MW Power Plant Pre-acquisition Strategic Due Diligence, Confidential Client, Victorville, California, 2012: managed the strategic environmental due diligence for this power plant acquisition including a standard Phase I ESA scope and three key compliance and operational issues related to ongoing plant operation. Mr. Molinario coordinated URS specialists to evaluate cooling water permitting and future transition to reclaimed water to reduce uncertainty from California aqueduct supply, assess air emissions compliance under current and proposed regulations, and estimate the potential costs and impacts of greenhouse gas allowance purchases under California's AB32 law.

Environmental Due Diligence of Asphalt Plants, Confidential Major Oil Client, Texas and New Mexico, Project Manager. Managed environmental due diligence of two asphalt plants located in Albuquerque and El Paso for a major oil client. Used internal company protocols and industry best practices to put environmental findings in context for sale of these assets. Reviewed environmental compliance and spill prevention plans to assess environmental risk from ongoing operations.

Pre-acquisition Due Diligence of Brake Parts Inc. Auto Parts Manufacturer, Confidential Client, California. Project Manager. Managed the due diligence and compliance assessment of this automotive part remanufacturing facility. Authored the environmental due diligence report under an extremely aggressive project schedule and prepared a scope for a Phase II investigation conducted by the target company prior to closing.

Project Manager, Due Diligence and Compliance Assistance of JSDU's Spin-off into Lumentum and Viavi, 2014-2015: Managed the spin-off due diligence and environmental compliance and permitting tasks required for the spin-off. Assisted the client with regulatory requirements under the Connecticut Transfer Act and local regulations across the portfolio.

Project Manager, Divestiture Due Diligence of an Electronics Service Division, Confidential Client, 2015: Managed the divestiture due diligence of 54 sites associated with the client's electronics services division across North America. Managed multiple ERM teams completing the expedited due diligence in three weeks.

Project Manager, Pre-divestiture due diligence of five power plants, Confidential Client, California, 2015: Managed the divestiture assessment of five natural gas-fired power plants located across California. Mr. Molinario planned the site due diligence to include additional items that may be raised by buyer due diligence including greenhouse gases and water usage. He reviewed the environmental due diligence reports and managed ERM resources from multiple offices working concurrently.

USPS, Environmental Compliance Reviews, Multiple Locations in California. Facility audits at large USPS mail processing plants and vehicle maintenance facilities. These multi-media audits assessed compliance with environmental and other regulations at the federal, state, and local level. Performed audits, wrote findings, and produced reports documenting findings. Also responsible for the operation of the findings database (EMIS) used to store and merge findings from multiple facilities.

Project Auditor, Compliance Auditing of Data Center, Santa Clara, California, Confidential Client. Assessed data center operations for compliance with environmental and health and safety regulations. This assessment included air emissions, hazardous materials storage and reporting, and stormwater compliance.

Steve A. Williams, P.G.

Partner

Mr. Steve Williams is a Partner with ERM based in Irvine, California. He is an experienced Program Manager and Project Geologist/Hydrogeologist overseeing a wide variety of environmental and hydrogeologic investigations, remediation, environmental compliance, environmental permitting, and environmental construction projects at diverse and/or controversial sites with multiple stakeholders.

Mr. Williams has managed environmental projects for commercial, industrial, municipal, and federal clients focusing on sites in Southern California. Recent projects involve construction management, environmental compliance; storm water management; air compliance; soil, soil gas, and groundwater investigations; remedial actions; potable water supply well design and installation; and facility upgrade projects. He guides projects to completion while promoting the importance of health and safety, client service, work quality, and project schedule and cost control.

Mr. Williams regularly interfaces with local, state, and federal regulatory officials overseeing projects including the SCAQMD, DTSC, RWQCB, CEC, EPA, and other various county and local regulatory agencies. He leads and presents client, public, and regulatory meetings, and is the client focal point for regulatory interaction. His approach to managing sites is to engage clients to discuss their goals and objectives, project variables, and stakeholder concerns. He outlines potential or recommended scope of work to drive the project to completion.

Key Projects

RCRA Facility Investigation, Environmental Construction, Permitting Support Oversight, El Segundo, CA, NRG Energy, 2010-2013. Project Manager

The project consisted of demolition of a natural gas powered water cooled energy plant and construction of a new 560 megawatt power generating facility. Project involved environmental compliance management; storm water management; air compliance; various permitting tasks; materials testing; waste management; hazardous and nonhazardous waste characterization; soil, soil gas, and groundwater sampling; excavation oversight; well abandonments; Ecological and Human Health Risk Assessments; concrete, soil, and materials testing for PCBs and remediation of PCBs, metals, TPH, and VOC impacted soil and groundwater. Also involved direct working relationship with the California Energy Commission (CEC), California Department of toxic Substance Control (DTSC), Regional Water Quality Control Board (RWQCB), Air Quality Management District (AQMD), the City of El Segundo and Manhattan Beach, and Federal EPA TSCA.

Environmental Investigations and Site Remediation, Los Angeles County, CA, Los Angeles Unified School District, 2000-2013. Project Manager

Managed numerous environmental investigations and remediation projects to facilitate the construction of new schools and site upgrades at existing schools. Performed subsurface investigations and remedial actions on dozens of sites worth over \$20 million. Typical scope of work consisted of conducting Environmental Data Reports (EDRs); Phase Is; 1440 Sampling; Preliminary Endangerment Assessments (PEA) and Supplemental Site Investigations (SSIs) for soil, soil gas, and groundwater; groundwater monitoring; remedial investigations (RI) and feasibility studies (FS); geologic hazard assessments; remedial action work plans and plans (RAWs and RAPs); human health risk evaluations (HHRAs); remedial actions; construction management; closure activities; AQMD Permitting; CEQA Support; property condition assessments; waste management; and public outreach support. Led project and managed team, and attended and presented at project meetings with client project and program managers, other team consultants, the Department of Toxic Substance Control (DTSC), and the public.

ITT, Xylem, and Excelis, Various Sites, US, 2008-2013. Regional Program Manager

Oversaw a wide variety of projects including Phase Is, Remedial Investigations (RIs), Remedial Process Optimizations, Treatment System Repair/Upgrades, PCB assessments, Remedial Technology Evaluations, Conceptual Site Models (CSMs) and CSM updates, and groundwater monitoring programs. The RIs consisted of soil, soil gas, and groundwater investigations, and included the use of various field techniques including MIP, HPT, CPT, direct push, HSA and Sonic drilling. Remedial treatment systems evaluated included groundwater and dual phase extraction systems. CSMs were developed using Environmental Sequence Stratigraphy techniques.

Environmental Investigations and Remediation, Southwest United States, Chrysler Corporation, 1995-2013. Program Manager

Supported the client program manager and oversaw Chrysler opportunities. Used a team of project managers and professionals to conduct the site investigations and remedial actions. Scope of work included Phase I Site Assessments, Phase II Site investigations, groundwater monitoring and remedial actions, property condition assessments and hazardous material assessments, and site cleanups.

Appendix I

Land Use and Planning

Appendix I1

Consistency with Fresno County General Plan

APPENDIX I1

Consistency with Fresno County General Plan

I.1 Approach to Analysis

Pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15125(d), this analysis describes applicable general plans and regional plans and policies and the manner in which they apply to the Luna Valley Solar Project (the Project), and then evaluates the consistency of the Project with these plans and policies. Each environmental resource section in Chapter 4, *Environmental Analysis*, identifies the applicable statutes, regulations, ordinances, plans, policies, and standards that pertain to that resource. The following analysis specifically addresses the Project’s consistency with the Fresno County General Plan. The consistency analysis for other applicable plans, policies, and regulations is provided in the pertinent topical sections of Chapter 4, in the context of the subject resource area. **Table I1-1** provides an index of such discussions, listing both CEQA significance criteria and location in this document where the reader can find the impact evaluation.

The Fresno County General Plan contains seven policy elements that guide physical development within the County: Economic Development; Agriculture and Land Use; Transportation and Circulation; Public Facilities and Services; Open Space and Conservation; Health and Safety; and Housing. Consistent with CEQA Guidelines section 15125(d), General Plan policies that are not relevant to the Project are not discussed here. For example, policies guiding County review of specific plans or policies related to land use designations that are not present within the Project boundary are not addressed.

Because the policy language found in a general plan is susceptible to varying interpretations, it is often difficult to determine whether a proposed project is consistent or inconsistent with such policies. Furthermore, because plans often contain numerous policies emphasizing differing legislative goals, a project may be consistent with a general plan, taken as a whole, even though it may appear to be inconsistent with specific policies within the plan. The board or commission that enacted the plan or policy generally determines the meaning of such policies; these interpretations prevail if they are “reasonable,” even though other reasonable interpretations may also exist. In light of these considerations, the consistency evaluation in this Draft EIR reflects the County’s determination that, as a whole, that the Project is consistent with applicable plans and policies.¹ Finally, the Project is compared to policies in each of the General Plan elements.

¹ Direct and indirect physical impacts resulting from Project implementation are not addressed in this section, but in the appropriate technical sections of this Draft EIR (See Chapter 4, *Environmental Analysis*). Any conflict between the Project and General Plan policies that relates to physical environmental issues are discussed in Chapter 4. The compatibility of the Project with Fresno County General Plan policies that do not relate to physical environmental issues

**TABLE I1-1
 CEQA SIGNIFICANCE CRITERIA REQUIRING EVALUATION OF
 CONSISTENCY WITH PLANS AND POLICIES**

Significance Criteria (from Appendix G of the CEQA Guidelines)	EIR Section
Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state or locally designated scenic highway	Section 4.2, <i>Aesthetics</i>
Conflict with existing zoning for agricultural use, or a Williamson Act contract	Section 4.3, <i>Agriculture and Forestry Resources</i>
Conflict with or obstruct implementation of the applicable air quality plan	Section 4.4, <i>Air Quality</i>
Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance	Section 4.5, <i>Biological Resources</i>
Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.	Section 4.5, <i>Biological Resources</i>
Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs.	Section 4.9, <i>Greenhouse Gas Emissions</i>
Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.	Section 4.12, <i>Land Use and Planning</i>
Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan	Section 4.13, <i>Mineral Resources</i>
Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies	Section 4.14, <i>Noise and Acoustics</i>
Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.	Section 4.18, <i>Transportation</i>
Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.	Section 4.18, <i>Transportation</i>

Tables I1-2 through I1-6 summarizes the Project’s consistency with applicable objectives, goals, and policies of the Fresno County General Plan is discussed below. As shown in the table, after the implementation of the various mitigation measures identified in this Draft EIR, the Project would be consistent with applicable objectives, goals, and policies.

I.2 Consistency with the Fresno County General Plan Agriculture and Land Use Element

The Agriculture and Land Use Element describes the Countywide land use concept and is intended to help the County achieve integrated and coordinated land use, open space, and transportation by defining areas of intended growth and areas that should be preserved.

will be considered by decision-makers as part of their decision about whether to approve or deny the Project. Any potential conflicts identified as part of the process would not alter the physical environmental effects of the Project.

The Project site is zoned AE20, Exclusive Agricultural with a minimum lot size of 20 acres (Fresno County 2011). As indicated in Section 816 of the Fresno County Zoning Code, permitted uses in AE districts include raising livestock, poultry, and plant crops; single-family residences and accessory and farm buildings; and other agricultural and home occupation uses. Electrical transmission and distribution substations are allowed in AE districts subject to director review and approval (Section 816.2(D)). Additionally, Fresno County processes PV solar facilities through the Unclassified Conditional Use Permit process based on Section 853.B(14) of the Zoning Ordinance. Although the Project would occupy land designated as agriculture, it would not conflict with the County’s preservation and conservation objectives. The Project’s physical environmental impacts on habitat, recreation, scenic values, mineral resource extraction, and natural resource preservation are discussed in Chapter 4 of this Draft EIR. **Table I1-2** evaluates the Project’s consistency with the Countywide agriculture and land use policies.

**TABLE I1-2
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES**

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy LU-A.1: The County shall maintain agriculturally-designated areas for agriculture use and shall direct urban growth away from valuable agricultural lands to cities, unincorporated communities, and other areas planned for such development where public facilities and infrastructure are available.</p>	<p>Consistent. The Project site is zoned AE20, Exclusive Agricultural. As indicated in Section 816.2(D) of the Fresno County Zoning Code, permitted uses in AE districts include electrical transmission and distribution.</p>
<p>Policy LU-A.2: The County shall allow by right in areas designated Agriculture activities related to the production of food and fiber and support uses incidental and secondary to the on-site agricultural operation. Uses listed in Table LU-3 are illustrative of the range of uses allowed in areas designated Agriculture.</p>	<p>Consistent. The Project site is zoned AE20, Exclusive Agricultural. As indicated in Section 816.2(D) of the Fresno County Zoning Code, permitted uses in AE districts include electrical transmission and distribution.</p>
<p>Policy LU-A.3: The County may allow by discretionary permit in areas designated Agriculture, special agricultural uses and agriculturally-related activities, including value added processing facilities, and certain non-agricultural uses listed in Table LU-3. Approval of these and similar uses in areas designated Agriculture shall be subject to the following applicable criteria:</p> <ul style="list-style-type: none"> a. The use shall provide a needed service to the surrounding agricultural area which cannot be provided more efficiently within urban areas or which requires location in a non-urban area because of unusual site requirements or operational characteristics; b. The use should not be sited on productive agricultural lands if less productive land is available in the vicinity; c. The operational or physical characteristics of the use shall not have a detrimental impact on water resources or the use or management of surrounding properties within at least one-quarter (1/4) mile radius; d. A probable workforce should be located nearby or be readily available 	<p>Not applicable. The policies pertain to County policy actions that are not related to the Project or review of its associated permit applications.</p>
<p>Policy LU-A.4: The County shall require that the recovery of mineral resources and the exploration and extraction of oil and natural gas in areas designated Agriculture comply with the Mineral Resources Section of the Open Space and Conservation Element.</p>	<p>Not Applicable. The Project does not include mineral resources recovery of oil and natural gas extraction.</p>
<p>Policy LU-A.5: The County shall allow the Agricultural Commercial (AC) center zone district to remain in areas designated Agriculture if the land was so zoned prior to September 20, 1990. Commercial uses legally established prior to that date shall be deemed conforming, but expansion or the addition of new commercial uses shall require a discretionary permit as provided in Policy LU-A.3.</p>	<p>Not Applicable. The Project site is zoned AE20, Exclusive Agricultural.</p>

TABLE I1-2 (CONTINUED)
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy LU-A.6: The County shall maintain twenty (20) acres as the minimum permitted parcel size in areas designated Agriculture, except as provided in Policies LU-A.9, LUA. 10, and LU-A.11. The County may require parcel sizes larger than twenty (20) acres based on zoning, local agricultural conditions, and to help ensure the viability of agricultural operations.</p>	<p>Not Applicable. The Project does not include subdivision of land into smaller parcels.</p>
<p>Policy LU-A.7: The County shall generally deny requests to create parcels less than the minimum size specified in Policy LU-A.6 based on concerns that these parcels are less viable economic farming units, and that the resultant increase in residential density increases the potential for conflict with normal agricultural practices on adjacent parcels. Evidence that the affected parcel may be an uneconomic farming unit due to its current size, soil conditions, or other factors shall not alone be considered a sufficient basis to grant an exception. The decision-making body shall consider the negative incremental and cumulative effects such land divisions have on the agricultural community.</p>	<p>Not Applicable. The Project does not include subdivision of land into smaller parcels.</p>
<p>Policy LU-A.8: The County shall allow by right on each parcel designated Agriculture and zoned for agricultural use one (1) single family residential unit. One (1) additional single family residential unit shall be allowed for each twenty (20) acres in excess of twenty (20) acres where the required minimum parcel size is twenty (20) acres. One (1) additional single family residential unit shall be allowed for each forty (40) acres in excess of forty (40) acres where the required minimum parcel size is forty (40) acres. The County may, by discretionary permit, allow a second unit on parcels otherwise limited by this policy to a single unit.</p>	<p>Not Applicable. The Project does not propose any dwelling units.</p>
<p>Policy LU-A.9: The County may allow creation of homesite parcels smaller than the minimum parcel size required by Policy LU-A.6, if the parcel involved in the division is at least twenty (20) acres in size, subject to the following criteria: a. The minimum lot size shall be sixty thousand (60,000) square feet of gross area, except that a lesser area shall be permitted when the owner submits evidence satisfactory to the Health Officer that the soils meet the Water Quality Control Board Guidelines for liquid waste disposal, but in no event shall the lot be less than one (1) gross acre; and b. One of the following conditions exists: 1. A lot less than twenty (20) acres is required for financing construction of a residence to be owned and occupied by the owner of abutting property; or 2. The lot or lots to be created are intended for use by persons involved in the farming operation and related to the owner by adoption, blood, or marriage within the second degree of consanguinity, there is only one (1) lot per related person, and there is no more than one (1) gift lot per twenty (20) acres; or 3. The present owner owned the property prior to the date these policies were implemented and wishes to retain his/her homesite and sell the remaining acreage for agricultural purposes. Each homesite created pursuant to this policy shall reduce by one (1) the number of residential units otherwise authorized on the remainder parcel created from the original parcel. The remainder parcel shall be entitled to no less than one residential unit.</p>	<p>Not Applicable. The Project does not propose an agricultural commercial center.</p>
<p>Policy LU-A.10: The County may allow by discretionary permit creation of substandard lots when necessary for the development of an agricultural commercial center pursuant to Policy LU-A.3 or in conjunction with development within a designated commercial interchange within the Westside Freeway Corridor Overlay. Approval of such parcels shall take into consideration the proposed use of the property, surrounding uses, and the potential for abandonment of the planned commercial use at a future date. Appropriate conditions shall be applied to minimize adverse impacts on surrounding agricultural operations. Parcels for agricultural commercial centers shall in no case be less than one (1) gross acre.</p>	<p>Not Applicable. The Project does not propose an agricultural commercial center.</p>

TABLE I1-2 (CONTINUED)
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy LU-A.11: The County may allow by discretionary permit creation of substandard size lots when such action is deemed necessary by the Board of Supervisors for the recovery of mineral resources and the exploration and extraction of oil and gas in accordance with the policies of Section OS-C, Mineral Resources, of the Open Space and Conservation Element. In no case shall such action result in creation of lots less than five (5) gross acres in size.</p>	<p>Not Applicable. The Project does not include mineral resources recovery of oil and natural gas extraction.</p>
<p>Policy LU-A.12: In adopting land uses policies, regulations and programs, the County shall seek to protect agricultural activities from encroachment of incompatible land uses.</p>	<p>Consistent. This policy is intended to guide the efficient use of land within the County. The General Plan acknowledges the need to provide the necessary infrastructure, services, and resources to accommodate planned growth. The Project would not be an inefficient use of land because it would not adversely affect the County's ability to direct growth into strategically located centers or existing developed areas; rather, it would be remotely located but would serve the County's anticipated growth.</p> <p>This Draft EIR represents the process of evaluating the Project's impacts to the environment, infrastructure, and services, and the County will consider its impacts to the economy when making decisions regarding approval or disapproval of the permit applications.</p>
<p>Policy LU-A.13: The County shall protect agricultural operations from conflicts with nonagricultural uses by requiring buffers between proposed non-agricultural uses and adjacent agricultural operations.</p>	<p>Consistent. The Project would maintain a buffer between the Project and adjacent agricultural operations and would implement a reclamation plan to return the site to a state of readiness for agricultural use after Project decommissioning. The Project would be subject to review as part of the UCUP process. Section 4.3, <i>Agriculture and Forestry Resources</i> discusses potential impacts to agricultural resources.</p>
<p>Policy LU-A.14: The County shall ensure that the review of discretionary permits includes an assessment of the conversion of productive agricultural land and that mitigation be required where appropriate.</p>	<p>Consistent. The Project site is zoned AE20, Exclusive Agricultural. As indicated in Section 816.2(D) of the Fresno County Zoning Code, permitted uses in AE districts include electrical transmission and distribution substations.</p>
<p>Policy LU-A.15: The County shall generally condition discretionary permits for residential development within or adjacent to agricultural areas upon the recording of a Right-to-Farm Notice, which is an acknowledgment that residents in the area should be prepared to accept the inconveniences and discomfort associated with normal farming activities and that an established agricultural operation shall not be considered a nuisance due to changes in the surrounding area.</p>	<p>Consistent. Although the Project does not include residential development, the Applicant would be required to record with the County recorder a Right-to-Farm Notice indicating that adjacent agricultural operations shall not become a nuisance due to the changed condition of the Project site.</p>
<p>Policy LU-A.16: The County should consider the use of agricultural land preservation programs that improve the competitive capabilities of farms and ranches, thereby ensuring long-term conservation of viable agricultural operations. Examples of programs to be considered should include: land trusts; conservation easements; dedication incentives; new and continued Williamson Act contracts; Farmland Security Act contracts; the California Farmland Conservancy Program Fund; agricultural education programs; zoning regulations; agricultural mitigation fee program; urban growth boundaries; transfer of development rights; purchase of development rights; and agricultural buffer policies.</p>	<p>Not Applicable. The Project does not conflict with the County's ability to establish agricultural preservation programs. The Project site is not under Williamson Act contract.</p>

TABLE I1-2 (CONTINUED)
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy LU-A.17: The County shall accept California Land Conservation contracts on all designated agricultural land subject to location, acreage, and use limitations established by the County.</p>	<p>Not Applicable. The Project site is not under Williamson Act contract and project implementation would not conflict with the County's ability to review Williamson Act contracts.</p>
<p>Policy LU-A.18: The County shall encourage land improvement programs to increase soil productivity in areas containing lesser quality agricultural soils.</p>	<p>Not Applicable. The Project would not conflict with the County's ability to encourage land improvement programs.</p>
<p>Policy LU-A.19: The County shall encourage landowners to participate in programs that reduce soil erosion and increase soil productivity. To this end, the County shall promote coordination between the Natural Resources Conservation Service, Resource Conservation Districts, UC Cooperative Extension, and other agencies and organizations.</p>	<p>Consistent. Section 4.8, <i>Geology, Soils, and Paleontological Resources</i> includes an evaluation of potential erosion-related impacts, and associated mitigation. The Project would comply with a Construction General Permit, and implementation of a Stormwater Pollution Prevention Plan (SWPPP) would limit the impact of construction-related soil erosion by enacting best management practices (BMPs) to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. Following construction, the site would be replanted with a rangeland seed mix of grasses and forage crops if required.</p>
<p>Policy LU-A.20: Water Resources. The County shall adopt and support policies and programs that seek to protect and enhance surface water and groundwater resources critical to agriculture.</p>	<p>Generally Consistent. The impact of the Project on surface water quality would be less than significant, surface water movement and infiltration is not expected to change significantly. Additionally, the Project would have a less than significant impact on groundwater supplies and groundwater recharge.</p>
<p>Program LU-A.C: The County shall develop and implement guidelines for design and maintenance of buffers to be required when new non-agricultural uses are approved in agricultural areas. Buffer design and maintenance guidelines shall include, but not be limited to, the following:</p> <ol style="list-style-type: none"> a. Buffers shall be physically and biologically designed to avoid conflicts between agriculture and non-agricultural uses. b. Buffers shall be located on the parcel for which a permit is sought and shall protect the maximum amount of farmable land, c. Buffers generally shall consist of a physical separation between agricultural and non-agricultural uses. The appropriate width shall be determined on a site-by-site basis taking into account the type of existing agricultural uses, the nature of the proposed development, the natural features of the site, and any other factors that affect the specific situation. d. Appropriate types of land uses for buffers include compatible agriculture, open space and recreational uses such as parks and golf courses, industrial uses, and cemeteries. e. The County may condition its approval of a project on the ongoing maintenance of buffers. f. A homeowners' association or other appropriate entity shall be required to maintain buffers to control litter, fire hazards, pests, and other maintenance problems. 	<p>Consistent. A Pest Management Plan would be implemented to control the introduction or establishment of pests or weeds during Project activities. Implementation of this plan would prevent the Project site from becoming a nuisance to adjacent agricultural operations through the introduction of pests or weeds. Consistent with the Fresno County Solar Facility guidelines, the Project would include a sufficient buffer to minimize impacts of the operation to adjacent properties.</p>

TABLE I1-2 (CONTINUED)
FRESNO COUNTY GENERAL PLAN AGRICULTURE AND LAND USE ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
g. Buffer restrictions may be removed if agricultural uses on all adjacent parcels have permanently ceased. (See Policy LU-A.16)	
Program LU-A.E: The County shall continue to implement the County's Right-to-Farm Ordinance, and will provide information to the local real estate industry to help make the public aware of the right-to-farm provisions in their area. (See Policy LU-A.15)	Consistent. Although the Project does not include residential development, the Applicant would be required to record with the County recorder a Right-to-Farm Notice indicating that adjacent agricultural operations shall not become a nuisance due to the changed condition of the Project site.
Policies LU-B.1 – LU-B.14	Not Applicable. The Project is not Located within the Westside Rangelands Area.
Policies LU-C.1 – LU-C.10	Not Applicable. The Project is not Located within the River Influence Areas.
Policies LU-D.1 – LU-D.7	Not Applicable. The Project is not Located within the Westside Freeway Corridor.
Policies LU-E.1 – LU-E.28	Not Applicable. The Project does not include Rural Residential development.
Policies LU-F.1 – LU-F.42	Not Applicable. The Project does not include Urban Transit, Residential, Commercial, or Industrial development.
Policies LU-G.1 – LU-G.23	Not Applicable. The Project is not Located within the incorporated or City fringe areas or an unincorporated community.

I.3 Consistency with Other Elements of the Fresno County General Plan

I.3.1 Transportation and Circulation Element

Fresno County’s General Plan includes policies regarding access and safety standards of roadway facilities, bike facilities, and public transit. Although the General Plan seeks to coordinate multiple forms of transportation, including cars, commercial vehicles, buses, transit, bicycles, and pedestrian traffic, the General Plan does not contain specific policies governing pedestrian traffic. Fresno County also has adopted a Regional Bicycle and Recreational Trails Master Plan (Fresno County 2013) that addresses non-motorized transportation systems and identifies barriers to trails and bikeways.

The Project would not conflict with the objectives and policies of the Transportation and Circulation Element. As described in Section 4.18, *Transportation and Traffic*, no public transportation services or dedicated pedestrian or bicycle facilities are on roads that access the Project site, and neither State Route (SR) 33 nor other roadways that would be traveled by Project traffic are listed within the Transportation and Circulation Element as an “existing or planned bikeway.” The traffic generated by the Project would have a less than significant impact on levels of service on area roadways after the incorporation of Mitigation Measure 4.18-1, Construction and Decommissioning Traffic Management Plan. Similarly, the Project site would not introduce a

barrier to non-motorized travel. Although the Project would not be located near mass transit services, it would not impede the future development of the types of circulation systems envisioned by the General Plan because it would not occupy land that would be needed to create transportation corridors or result in any other long-term changes that would adversely affect transportation in the County.

Project consistency with specific Transportation and Circulation Element policies is presented in **Table I1-3** below.

**TABLE I1-3
 FRESNO COUNTY GENERAL PLAN TRANSPORTATION AND CIRCULATION ELEMENT POLICIES**

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy TR-A.3: The County shall require that new or modified access to property abutting a roadway and to intersecting roads conform to access specifications in the Circulation Diagram and Standards section. Exceptions to the access standards may be permitted in the manner and form prescribed in the Fresno County Zoning and Subdivision Ordinances, provided that the designed safety and operational characteristics of the existing and planned roadway facility will not be substantially diminished.</p>	<p>Consistent. Project related traffic would have a less than significant impact related to local roadways abutting the Project site after the implementation of Mitigation Measure 4.18-1. Design and construction of Project access road intersections would conform with Fresno County standards (per General Plan Policies). Among the applicable requirements are rights-of-way and setback requirements.</p>
<p>Policy TR-A.5: The County shall require dedication of right-of-way or dedication and construction of planned road facilities as a condition of land development, and require an analysis of impacts of traffic from all land development projects including impacts from truck traffic. Each such project shall construct or fund improvements necessary to mitigate the effects of traffic from the project. The County may allow a project to fund a fair share of improvements that provide significant benefit to others through traffic impact fees.</p>	<p>Consistent. An assessment of potential traffic impacts, including truck traffic, is provided in Section 4.18.</p>
<p>Policy TR-A.8: The County shall ensure that land development that affects roadway use or operation or requires roadway access to plan, dedicate, and construct required improvements consistent with the criteria in the Circulation Diagram and Standards section of this element.</p>	<p>Consistent. Local access to the Project site is provided from West Manning Avenue and West South Avenue. These roads primarily serve agriculturally-related traffic, with corresponding low existing traffic volumes.</p>

I.3.2 Public Facilities and Services Element

The Public Facilities and Services Element of the Fresno County General Plan contains goals, policies, and implementation program measures to ensure public facilities and services are adequately available and accessible in a timely fashion to serve new development. The Project’s impacts with respect to public services, including police, fire, and education services, are primarily addressed in Sections 4.16, *Public Services*, and 4.10, *Hazards and Hazardous Materials*. Project consistency with specific Public Facilities and Services Element policies is presented in **Table I1-4** below.

**TABLE I1-4
FRESNO COUNTY GENERAL PLAN PUBLIC FACILITIES AND SERVICES ELEMENT POLICIES**

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy PF-C.3: To reduce demand on the County's groundwater resources, the County shall encourage the use of surface water to the maximum extent feasible.</p>	<p>Consistent. The Project would have a less than significant impact to groundwater resources. Groundwater extraction associated with construction, operation, and decommissioning would not cause substantial depletion of the groundwater basin. An analysis of the Project's impact to groundwater resources is provided in Section 4.11, <i>Hydrology and Water Quality</i>.</p>
<p>Policy PF-C.25: The County shall require that all new development within the County use water conservation technologies, methods, and practices as established by the County.</p>	<p>Consistent. The Project would comply with the Fresno County Water Conservation Ordinance (Effective October 30, 2014). The Project would comply with water conservation measures outlined in the ordinance, as necessary.</p>
<p>Policy PF-D.6: The County shall permit individual on-site sewage disposal systems on parcels that have the area, soils, and other characteristics that permit installation of such disposal facilities without threatening surface or groundwater quality or posing any other health hazards and where community sewer service is not available and cannot be provided.</p>	<p>Consistent. The Project would use portable restrooms or a septic system, which would be installed for sanitary facilities in the O&M building. If an in-ground septic system is constructed it would include a 750-gallon septic tank and an approximately 3,000 square foot leech field. Either the septic tank and leech field or portable restrooms would be installed and maintained in accordance with County and state requirements.</p>
<p>Policy PF-E.7: The County shall require new development to pay its fair share of the costs of Fresno County storm drainage and flood control improvements within unincorporated areas.</p>	<p>Consistent. The Project is not located in an area with an existing or planned stormwater drainage system.</p>
<p>Policy PF-E.11: The County shall encourage project designs that minimize drainage concentrations and maintain, to the extent feasible, natural site drainage patterns.</p>	<p>Consistent. The Project would not substantially alter the existing drainage pattern of the area. The Project would be designed to minimize substantial alterations to drainage patterns on the Project site. The slight increase in runoff generated from the impervious surfaces would likely infiltrate into the ground over a short distance. Rain falling onto the solar arrays would drain onto the ground underneath, which would remain pervious.</p>
<p>Policy PF-E.13: The County shall encourage the use of natural storm water drainage systems to preserve and enhance natural drainage features.</p>	<p>Consistent. The Project is not located in an area with an existing or planned stormwater drainage system.</p>
<p>Policy PF-E.14: The County shall encourage the use of retention-recharge basins for the conservation of water and the recharging of the groundwater supply.</p>	<p>Consistent. Runoff generated from the impervious surfaces would be minimal and likely infiltrate into the ground over a short distance. Rain falling onto the solar arrays would drain onto the ground underneath, which would remain pervious.</p>
<p>Policy PF-E.21: The County shall require the use of feasible and practical best management practices (BMPs) to protect streams from the adverse effects of construction activities, and shall encourage the urban storm drainage systems and agricultural activities to use BMPs.</p>	<p>Consistent. None of the new impervious surfaces would be adjacent to or otherwise directly connected to a stream.</p>
<p>Policy PF-F.1: The County shall continue to promote maximum use of solid waste source reduction, reuse, recycling, composting, and environmentally-safe transformation of wastes.</p>	<p>Consistent. The Project would be required to comply with Fresno County's Construction and Demolition (C&D) Debris Recycling Program which requires a Waste Management Plan for recycling a minimum of 50 percent of all non-hazardous waste. Wooden construction waste would be sold, recycled, or chipped and spread on the Project site for weed control as appropriate. Other compostable materials, such as vegetation, might also be composted off-site. Operation and maintenance activities would produce negligible volumes of solid and liquid wastes that would be disposed of in accordance with all applicable requirements.</p>

TABLE I1-4 (CONTINUED)
FRESNO COUNTY GENERAL PLAN PUBLIC FACILITIES AND SERVICES ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy PF-F.4: The County shall ensure that all new development complies with applicable provisions of the County Integrated Waste Management Plan.</p>	<p>Consistent. The Project would generate solid waste during construction, operation and maintenance, and decommissioning activities. All handling and processing of construction, demolition, and inert debris would be in accordance with applicable regulatory requirements. Landfill waste generated by the Project would not exceed its permitted daily tonnage or deplete substantial long-term capacity.</p>
<p>Policy PF-J.3: The County shall require all new residential development along with new urban commercial and industrial development to underground utility lines onsite.</p>	<p>Generally Consistent. The Project would include both underground and overhead interconnection and distribution lines.</p>
<p>Goal PF-G. To protect life and property by deterring crime and ensuring the prompt an efficient provision of law enforcement service and facility needs to meet the growing demand for police services associated with an increasing population.</p>	<p>Consistent. The Project would not conflict with the County’s ability to provide efficient law enforcement services. Police protection primarily may be required for incidents such as the theft of construction equipment and/or vandalism of the Project. To ensure Facility security, offsite security personnel could be dispatched during nighttime hours or could be onsite. In addition, appropriate security measures would be implemented to ensure control of site access and minimize security risks.</p>
<p>Policy PF-G.2: The County shall strive to maintain a staffing ratio of two (2) sworn officers serving unincorporated residents per 1,000 residents served. (This count of officers includes all ranks of deputy sheriff personnel and excludes all support positions and all sworn officers serving county wide population interests such as bailiffs, and sworn officers serving contract cities and grant specific populations).</p>	<p>Consistent. The Project would not conflict with the County’s ability to meet the desired staffing ratio; the Project would not result in new residents that could contribute to the demand for police services.</p>
<p>Policy PF-G.6: The County shall promote the incorporation of safe design features (e.g., lighting, adequate view from streets into parks) into new development by providing Sheriff Department review of development proposals.</p>	<p>Consistent. Nighttime lighting for site security or maintenance requirements would be directed downward and shielded to focus illumination on the desired work areas only, and to prevent light spillage onto adjacent properties.</p>
<p>Goal PF-H. To ensure the prompt and efficient provision of fire and emergency medical facility and service needs, to protect residents of and visitors to Fresno County from injury and loss of life, and to protect property from fire.</p>	<p>Consistent. Temporary construction- or decommissioning-related increases in demand on fire protection services would not affect the ability of Fresno County Fire Protection District to respond to incidents within the recommended time periods. Operation personnel would not contribute to a significant population increase, and would not result in an increase to the demand for fire protection services or require new or altered facilities.</p>
<p>Policy PF-H.1: The County shall work cooperatively with local fire protection districts to ensure the provision of effective fire and emergency medical services to unincorporated areas within the county.</p>	<p>Consistent. The Project would not conflict with the County’s ability to provide effective emergency services. The Project would not result in new residents that could contribute to the demand for police services, and would incorporate onsite security measures.</p>
<p>Implementation Program PF-H.B: The County shall work with the California Department of Forestry and Fire Protection, local fire protection agencies, and city fire departments to maximize the use of resources to develop functional and/or operational consolidations and standardization of services and to maximize the efficient use of fire protection resources. (See Policy PF-H.1).</p>	<p>Consistent. The Project would not affect the County’s ability to develop interagency coordination.</p>

TABLE I1-4 (CONTINUED)
FRESNO COUNTY GENERAL PLAN PUBLIC FACILITIES AND SERVICES ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy PF-H.2: Prior to the approval of development projects, the County shall determine the need for fire protection services. New development in unincorporated areas of the County shall not be approved unless adequate fire protection facilities are provided.</p>	<p>Consistent. Increases in long-term demand for fire protection services typically are associated with substantial increases in population. Once operational, up to 4 workers could be on the site at any one time which would not contribute to a significant population increase, and would not result in an increase to the demand for fire protection services or require new or altered facilities.</p>
<p>Policy PF-H.5: The County shall require that new development be designed to maximize safety and minimize fire hazard risks to life and property.</p>	<p>Consistent. Section 4.20 includes an evaluation of potential fire hazards. The Project is not located in a zone of very high fire severity hazard as defined by CAL FIRE. Regardless, best management practice/ fire prevention measures would be implemented to minimize fire risk.</p>
<p>Policy PF-H.8: The County shall encourage local fire protection agencies in the County to maintain the following as minimum standards for average first alarm response times to emergency calls:</p> <ul style="list-style-type: none"> a. 5 minutes in urban areas; b. 15 minutes in suburban areas; and c. 20 minutes in rural areas. 	<p>Consistent. Temporary construction- or decommissioning-related increases in demand on fire protection services would not affect the Fresno County Fire Protection District's ability to respond to incidents within the recommended time periods.</p>
<p>Policy PF-H.10: The County shall ensure that all proposed developments are reviewed for compliance with fire safety standards by responsible local fire agencies per the Uniform Fire Code and other State and local ordinances.</p>	<p>Consistent. Section 4.20 includes an evaluation of potential fire hazards. The Project is not located in a zone of very high fire severity hazard as defined by CAL FIRE. Regardless, best management practice/ fire prevention measures would be implemented in order to minimize fire risk.</p>
<p>Policy PF-H.11: The County shall encourage local fire protection agencies to provide and maintain advanced levels of emergency medical services (EMS) to the public, consistent with current practice.</p>	<p>Consistent. The Project would not affect emergency response agencies' ability to provide and maintain advanced emergency services. Construction and operation would not require road closures that could affect emergency routes.</p>
<p>Goal PF-I. To provide for the educational needs of Fresno County and provide libraries for the educational, recreational, and literary needs of Fresno County residents.</p>	<p>Consistent. No residences are proposed as part of the Project, so it would not generate a demand for new school facilities, nor require the alteration of existing school facilities.</p>
<p>Policy PF-I.1: The County shall encourage school districts to provide quality educational facilities to accommodate projected student growth in locations consistent with land use policies of the General Plan.</p>	<p>Consistent. No residences are proposed as part of the Project, so it would not generate a demand for new school facilities, nor require the alteration of existing school facilities.</p>
<p>Policy PF-I.4: The County shall work cooperatively with school districts in monitoring housing, population, and school enrollment trends and in planning for future school facility needs and shall assist school districts in locating appropriate sites for new schools.</p>	<p>Consistent. No residences are proposed as part of the Project, so it would not generate a demand for new school facilities, nor require the alteration of existing school facilities.</p>

I.3.3 Open Space and Conservation Element

This purpose of this element is to guide the conservation, preservation, and/or development of open space and natural resources, including biological, cultural, mineral, and scenic resources. The Project's impacts with respect to species and habitat preservation, mineral resource extraction, and aesthetics are primarily addressed in Sections 4.2, *Aesthetics*, 4.5, *Biological Resources*, 4.6,

Cultural and Tribal Resources, and 4.13, *Mineral Resources*. The Project site intermittently has been cultivated for agricultural use for at least the past 10 years; no naturally occurring plant communities are present. The physical environmental impacts of the Project are described throughout the Draft EIR. Generally speaking, the Project would not contribute substantially to the degradation of natural resources after the implementation of mitigation measures. It would provide a source of renewable energy for use within California, increasing the productive capacity of the land while avoiding the types of pollution traditionally associated with fossil fuel energy sources.

The Open Space and Conservation Element of the Fresno County General Plan also evaluates the scenic resources of Fresno County and provides policies intended to protect the scenic resources of the County and ensure that development enhances those resources through various measures including identification, development review, acquisition, and other methods. The Project site has not been identified as a scenic resource. The Fresno County General Plan also includes policies intended to protect scenic resources along roadways of the County by identifying, developing, and maintaining scenic amenities along roads and highways in the County and ensuring that development enhances those resources. According to Policy OS-L.1, Fresno County has designated a system of scenic roadways that includes landscaped drives, scenic drives, and scenic highways. According to this element, the only designated scenic roadway in the vicinity of the Project site is Interstate 5 (5 miles west of the Project), which is designated as a scenic highway.

Project consistency with specific Open Space and Conservation Element policies is presented in **Table II-5** below.

**TABLE II-5
 FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES**

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy OS-A.25: The County shall minimize sedimentation and erosion through control of grading, cutting of trees, removal of vegetation, placement of roads and bridges, and use of off-road vehicles. The County shall discourage grading activities during the rainy season unless adequately mitigated to avoid sedimentation of creeks and damage to riparian habitat.</p>	<p>Consistent. Section 4.8, <i>Geology, Soils, and Paleontological Resources</i>, includes an evaluation of potential erosion-related impacts and associated mitigation. The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. Following construction, the site could be replanted with low-growing plant species appropriate for maintaining soil quality. The Project does not include tree removal or construction in creeks or riparian areas.</p>
<p>Policy OS-A.26: The County shall continue to require the use of feasible and practical best management practices (BMPs) to protect streams from the adverse effects of construction activities and urban runoff.</p>	<p>Consistent. The new impervious surfaces would not be adjacent to or otherwise directly connected to a distinct drainage channel. Section 4.8, <i>Geology, Soils, and Paleontological Resources</i>, includes an evaluation of potential erosion-related impacts. The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. Following construction, the site could be replanted with low-growing plant species appropriate for maintaining soil quality. The Project does not include tree removal or construction in creeks or riparian areas.</p>

TABLE I1-5 (CONTINUED)
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>OS-C.1: Incompatible Mining Uses. The County shall not permit incompatible land uses within the impact area of existing or potential surface mining areas.</p>	<p>Consistent. There is no current surface mining onsite. There is no indication or evidence that the clay, silt, and sand present on the Project site would be suitable for aggregate production of statewide or regional significance. Aggregate resources are widely available throughout the region and neither the SMGB nor Fresno County has officially designated the area as an aggregate resource area or mineral deposit of statewide or regional significance.</p>
<p>OS-C.2: Mineral Resource Zones. The County shall not permit land uses incompatible with mineral resource recovery within areas designated as Mineral Resource Zone 2 (MRZ-2).</p>	<p>Consistent. The Project site is not within an MRZ.</p>
<p>OS-C.7: Mining Buffers. The County shall require that new non-mining land uses adjacent to existing mining operations be designed to provide a buffer between the new development and the mining operations. The buffer distance shall be based on an evaluation of noise, aesthetics, drainage, operating conditions, biological resources, topography, lighting, traffic, operating hours, and air quality.</p>	<p>Consistent. There are no active mining claims within 25 miles of the Project site, nor is there any locatable mineral extraction activity within the Project site boundary.</p>
<p>OS-C.10: Mineral Resource Lands Protection. The County shall not permit land uses that threaten the future availability of mineral resource or prelude future extraction of those resources.</p>	<p>Consistent. There is no current surface mining onsite. There is no indication or evidence that the materials present on the Project site would be suitable for aggregate production of statewide or regional significance. Neither the SMGB nor Fresno County has officially designated the area as an aggregate resource area or mineral deposit of statewide or regional significance.</p>
<p>OS-C.12: New Development Compatibility. The County shall ensure that new discretionary land use developments are compatible with existing and potential surface mining areas and operations as identified on the Mineral Resource Zone Maps prepared by the State Division of Mines and Geology and other mineral resource areas identified by the County.</p>	<p>Consistent. The Project site is not within an MRZ. There are no active mining claims within 25 miles of the Project site, nor is there any locatable mineral activity within the Project site boundary.</p>
<p>OS-C.13: Oil and Gas Regulation Areas. Fresno County shall be divided into three areas for the regulation of oil and gas development.</p> <p>A) Urban areas including all land within one- fourth mile of the planned urban boundaries shown on adopted community plans.</p> <p>B) Established oil and gas fields as determined and updated by the California Division of Oil and Gas, excluding urban areas except where specifically included in these policies.</p> <p>C) Non-urban areas including all land not within either established oil and gas fields or urban areas.</p>	<p>Consistent. California Department of Conservation, Geologic Energy Management Division (CalGEM), indicates there is one known oil or gas well located within the Project boundary. CalGEM advises that all wells identified on the Project site prior to, or during, development activities be tested for liquid and gas leakage.</p>
<p>Policy OS-E.1: The County shall support efforts to avoid the "net" loss of important wildlife habitat where practicable. In cases where habitat loss cannot be avoided, the County shall impose adequate mitigation for the loss of wildlife habitat that is critical to supporting special-status species and/or other valuable or unique wildlife resources. Mitigation shall be at sufficient ratios to replace the function, and value of the habitat that was removed or degraded. Mitigation may be achieved through any combination of creation, restoration, conservation easements, and/or mitigation banking. Conservation easements should include provisions for maintenance and management in perpetuity. The County shall recommend coordination with the U.S. Fish</p>	<p>Consistent. The Project site does contain potentially suitable migratory corridors and breeding or nesting habitat for wildlife species, including San Joaquin kit fox; burrowing owls and other raptors, including Swainson's hawk, red-tailed hawk; and migratory birds. Implementation of Mitigation Measures 4.5-1 through 4.5-3, including preconstruction nesting bird surveys, would prevent potential impacts to these species. The Project Applicant would provide Worker Environmental Awareness Training, pre-construction surveys, monitor ground disturbing activities, restrict project activities to designated staging and access areas, cover exposed trenches and pipes to prevent entrapment, and impose speed limits onsite.</p>

**TABLE I1-5 (CONTINUED)
 FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES**

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>and Wildlife Service and the California Department of Fish and Game to ensure that appropriate mitigation measures and the concerns of these agencies are adequately addressed. Important habitat and habitat components include nesting, breeding, and foraging areas, important spawning grounds, migratory routes, migratory stopover areas, oak woodlands, vernal pools, wildlife movement corridors, and other unique wildlife habitats (e.g., alkali scrub) critical to protecting and sustaining wildlife populations.</p>	
<p>Policy OS-E.2: The County shall require adequate buffer zones between construction activities and significant wildlife resources, including both on-site habitats that are purposely avoided and significant habitats that are adjacent to the project site, in order to avoid the degradation and disruption of critical life cycle activities such as breeding and feeding. The width of the buffer zone should vary depending on the location, species, etc. A final determination shall be made based on informal consultation with the U.S. Fish and Wildlife Service and/or the California Department of Fish and Game.</p>	<p>Consistent. Burrowing owl have the potential to winter or nest on the Project site. Preconstruction clearance surveys and other minimization measures as described in Mitigation Measure 4.5-1 would ensure that no birds are impacted during construction.</p>
<p>Policy OS-E.3: The County shall require development in areas known to have particular value for wildlife to be carefully planned and, where possible, located so that the value of the habitat for wildlife is maintained.</p>	<p>Consistent. The Project site does contain potentially suitable migratory corridors and breeding or nesting habitat for wildlife species, including San Joaquin kit fox; burrowing owls and other raptors, including Swainson’s hawk, red-tailed hawk,; and migratory birds. Implementation of Mitigation Measures 4.5-1 through 4.5-3, including preconstruction nesting bird surveys, would prevent potential impacts to these species. The Project Applicant would provide Worker Environmental Awareness Training, pre-construction surveys, monitor ground disturbing activities, restrict project activities to designated staging and access areas, cover exposed trenches and pipes to prevent entrapment, and impose speed limits onsite, and use wildlife-friendly fencing.</p>
<p>Policy OS-E.4: The County shall encourage private landowners to adopt sound wildlife habitat management practices, as recommended by the California Department of Fish and Game officials and the U.S. Fish and Wildlife Service.</p>	<p>Consistent. The Project Applicant would provide Worker Environmental Awareness training, pre-construction surveys, monitor ground disturbing activities, restrict project activities to designated staging and access areas, cover exposed trenches and pipes to prevent entrapment, and impose speed limits onsite.</p>
<p>Policy OS-E.6: The County shall ensure the conservation of large, continuous expanses of native vegetation to provide suitable habitat for maintaining abundant and diverse wildlife populations, as long as this preservation does not threaten the economic well-being of the County.</p>	<p>Consistent. This Project does not conflict with the County’s ability to implement land conservation.</p>
<p>Policy OS-E.9: Prior to approval of discretionary development permits, the County shall require, as part of any required environmental review process, a biological resources evaluation of the project site by a qualified biologist. The evaluation shall be based upon field reconnaissance performed at the appropriate time of year to determine the presence or absence of significant resources and/or special-status plants or animals. Such evaluation will consider the potential for significant impact on these resources and will either identify feasible mitigation measures or indicate why mitigation is not feasible.</p>	<p>Consistent. Section 3.5 contains an analysis of potential impacts to biological resources. The analysis presented in this section is based on a review of relevant literature, field reconnaissance surveys, and focused biological surveys. It also relies upon a Biological Resources Evaluation Report prepared by Tetra Tech (2020), which documents existing conditions and the findings of various biological surveys on the Project site and in the surrounding vicinity.</p>
<p>Policy OS-E.10: The County shall support State and Federal programs to acquire significant fish and wildlife</p>	<p>Not Applicable. The Project would not conflict with the County’s ability to support programs.</p>

TABLE I1-5 (CONTINUED)
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
habitat areas for permanent protection and/or passive recreation use.	
Policy OS-E.16: The County should preserve, to the maximum extent practicable, significant wildlife migration routes such as the North Kings Deer Herd migration corridors and fawn production areas.	Consistent. Potential Impacts to migration routes are described in Section 4.5, <i>Biological Resources</i> . The Project site is within the Pacific Flyway, a significant avian migration route. The Mendota Wildlife Area, located approximately 4.5 miles east of the Project site, is a recognized stopover location for migratory birds travelling along the Pacific Flyway. The Project would not physically affect the Pacific Flyway. There are no other important migratory routes, corridors, or wildlife nursery sites near the Project site.
Policy OS-E.18: The County should preserve, to the maximum possible extent, areas defined as habitats for rare or endangered animal and plant species in a natural state consistent with State and Federal endangered species laws.	Consistent. There is potential habitat for burrowing owl, nesting raptors, and San Joaquin kit fox; however, pre-construction surveys will ensure nesting areas are avoided.
Policy OS-E.19: The County should preserve areas identified as habitats for rare or endangered plant and animal species primarily through the use of open space easements and appropriate zoning that restrict development in these sensitive areas.	Consistent. The Project site is zoned AE20, Exclusive Agricultural.
Policy OS-F.5: The County shall establish procedures for identifying and preserving rare, threatened, and endangered plant species that may be adversely affected by public or private development projects. The County shall require, as part of the environmental review process, a biological resources evaluation of the project site by a qualified biologist. The evaluation shall be based on field reconnaissance performed at the appropriate time of year to determine the presence or absence of significant plant resources and/or special-status plant species. Such evaluation shall consider the potential for significant impact on these resources and shall either identify feasible mitigation measures or indicate why mitigation is not feasible.	Consistent. A mixed species community dominated by crownscale covers 20.4 acres of the site. Implementation of Mitigation Measure 4.5-1 required development of a Rare Plant Strategy to evaluate options for safeguarding this community.
Policy OS-F.7: The County should encourage landowners to maintain natural vegetation or plant suitable vegetation along fence lines, drainage and irrigation ditches and on unused or marginal land for the benefit of wildlife.	Consistent. A mixed species community dominated by crownscale covers 20.4 acres of the site. Implementation of Mitigation Measure 4.5-1 required development of a Rare Plant Strategy to evaluate options for safeguarding this community.
Policy OS-G.12: The County shall continue, through its land use planning processes, to avoid inappropriate location of residential uses and sensitive receptors in relation to uses that include but are not limited to industrial and manufacturing uses and any other use which have the potential for creating a hazardous or nuisance effect.	Consistent. The nearest sensitive receptors to the Project site are rural residences located 1,500 feet from the Project site. Based on the results of a health risk assessment, the predicted worst case increase in cancer risk is below the San Joaquin Valley Air Pollution Control District (SJVAPCD) threshold. The Project would not be a significant source of criteria pollutant emissions or fugitive dust during operation and maintenance. With implementation of Mitigation Measure 4.4-2, impacts to sensitive receptors would be less than significant during construction, operation and maintenance, and decommissioning.
Policy OS-G.13: The County shall include fugitive dust control measures as a requirement for subdivision maps, site plans, and grading permits. This will assist in implementing the SJVAPCD's particulate matter of less than ten (10) microns (PM ₁₀) regulation (Regulation VIII). Enforcement actions can be coordinated with the Air District's Compliance Division.	Consistent. The Applicant would submit a Fugitive Dust Control Plan to the SJVAPCD for review and approval. The Dust Control Plan shall meet the requirements in Rule 8021-1 and incorporate the Regulation VIII recommended fugitive dust control measures to reduce PM ₁₀ emissions to the extent practical.

TABLE I1-5 (CONTINUED)
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy OS-G.14: The County shall require all access roads, driveways, and parking areas serving new commercial and industrial development to be constructed with materials that minimize particulate emissions and are appropriate to the scale and intensity of use.</p>	<p>Consistent. All disturbed areas, including storage piles, which are not being actively used for construction purposes, shall be effectively stabilized of dust emissions using water, chemical stabilizer/suppressant, covered with a tarp or other suitable cover or vegetative ground cover.</p>
<p>Policy OS-G.15: The County shall continue to work to reduce PM₁₀ and PM_{2.5} emissions from County-maintained roads by considering shoulder treatments for dust control as part of road reconstruction projects.</p>	<p>Consistent. The Project does not involve road reconstruction. Construction and operation of the Project will be implemented in compliance with SJVAPCD's Regulation VIII, Fugitive PM₁₀ Prohibitions and the current PM_{2.5} Plan.</p>
<p>Policy OS-H.2: The County shall strive to maintain a standard of five (5) to eight (8) acres of County-owned improved parkland per one thousand (1,000) residents in the unincorporated areas.</p>	<p>Consistent. The Project would not be located on designated parkland, affect the amount of County-owned parkland, nor result in population growth within Fresno County. Therefore the Project would not conflict with the County's ability to maintain the parkland ratio established in this policy.</p>
<p>Goal OS-J: To identify, protect, and enhance Fresno County's important historical, archeological, paleontological, geological, and cultural sites and their contributing environment, and promote and encourage preservation, restoration, and rehabilitation of Fresno County's historically significant resources in order to promote historical awareness, community identify, and to recognize the County's valued assets that have contributed to past County events, trends, styles of architecture, and economy.</p>	<p>Consistent. The Project would not conflict with the County's ability to protect cultural resources because the Project would not affect cultural resources. There are no historic structures remaining on the Project site.</p>
<p>Policy OS-J.1: Preservation of Historic Resources. The County shall encourage preservation of any sites and/or buildings identified as having historical significance pursuant to the list maintained by the Fresno County Historic Landmarks and Records Advisory Commission.</p>	<p>Consistent. The Project would not impact preservation of historic sites or buildings. There are no historic structures remaining on the Project site.</p>
<p>Policy OS-J.2: Historic Resources Consideration. The County shall consider historic resources during preparation or evaluation of plans and discretionary development projects.</p>	<p>Consistent. Section 4.6 contains results of a records search and field survey for the County's consideration of the Project.</p>
<p>Policy OS-J.14: Sites Protection and Mitigation. The County shall require that discretionary development projects, as part of any required CEQA review, identify and protect important historical, archeological, paleontological, and cultural sites and their contributing environment from damage, destruction, and abuse to the maximum extent feasible. Project-level mitigation shall include accurate site surveys, consideration of project alternatives to preserve archeological and historic resources, and provision for resource recovery and preservation when displacement is unavoidable.</p>	<p>Consistent. Section 4.6 provides an evaluation of potential Project impacts to cultural, archaeological, and historic resources. Section 4.8 analyzes potential impacts to paleontological resources. To evaluate the Project's potential effects on significant cultural resources, including prehistoric and historic archaeological sites, a cultural resources characterization and evaluation of the Project site were undertaken (Tetra Tech 2020). These efforts included a literature review, a Native American contact program, geoarchaeological review, and field surveys for areas of potential permanent and temporary impacts where facilities would be installed. In the event that unknown archaeological resources are discovered during Project construction, the Applicant would implement Mitigation Measure 4.6-2, which requires the retention of a qualified archaeologist and cultural resources awareness training, and which governs procedures in the event of inadvertent discovery of archaeological materials.</p>
<p>Goal OS-K: To conserve, protect, and maintain the scenic quality of Fresno County and discourage development that degrades areas of scenic quality.</p>	<p>Consistent. Project facilities including fencing, solar panels, and substation would be visible and would transform the landscape from a residential/agriculture visual character to an industrial character. However, the Project would not block or impair any existing significant visual resources or significantly impact the local visual character.</p>

TABLE I1-5 (CONTINUED)
FRESNO COUNTY GENERAL PLAN OPEN SPACE AND CONSERVATION ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy OS-K.1: The County shall encourage the preservation of outstanding scenic views, panoramas, and vistas wherever possible. Methods to achieve this may include encouraging private property owners to enter into open space easements for designated scenic areas.	Consistent. There are no designated scenic vistas within the viewshed of the entire Project site.
Policy OS-K.4: The County should require development adjacent to scenic areas, vistas, and roadways to incorporate natural features of the site and be developed to minimize impacts to the scenic qualities of the site.	Consistent. There are no designated scenic vistas within the viewshed of the entire Project site.
Goal OS-L: To conserve, protect, and maintain the scenic quality of land and landscape adjacent to scenic roads in Fresno County.	Consistent. There are no designated state scenic highways within the Project vicinity; nor roadways that are eligible for scenic designation within the Project viewshed.
Policy OS-L.1: The County designates a system of scenic roadways that includes landscaped drives, scenic drives, and scenic highways.	Consistent. There are no designated state scenic highways within the Project vicinity or roadways eligible for scenic designation within the Project viewshed.
Policy OS-L.3: The County shall manage the use of land adjacent to scenic drives and scenic highways based on the following principles: b. Proposed high voltage overhead transmission lines, transmission line towers, and cell towers shall be routed and placed to minimize detrimental effects on scenic amenities visible from the right-of-way.	Consistent. There are no designated state scenic highways or roadways eligible for scenic designation within the Project viewshed.

I.3.4 Health and Safety Element

The Health and Safety Element outlines Fresno County’s planning strategies regarding emergency management and response, fire hazards, flood hazards, seismic and geological hazards, airport hazards, hazardous materials, and noise. The Project’s impacts with respect to safety are primarily addressed in Section 4.8, *Geology, Soils, and Paleontological Resources*, Section 4.10, *Hazards and Hazardous Materials*, and Section 4.14, *Noise and Acoustics*. The design of the Project, as well as mitigation measures recommended in this Draft EIR, consider the potential seismic, soil instability, flood, fire, waste, and other hazards that are present in the Project area or that could result as a consequence of Project implementation. Although the Project would not avoid all hazards, even with Project consistency with specific Health and Safety Element policies is presented in **Table K1-6** below.

I.3.5 Housing Element

The Housing Element provides the County’s goals, policies, and programs for the development, improvement, and maintenance of housing within the unincorporated areas of the County. As described in Section 4.15, *Population and Housing*, the Project would not induce growth, nor would it displace people or housing. The Project does not propose or require new housing. This element is therefore not applicable to the Project.

**TABLE I1-6
FRESNO COUNTY GENERAL PLAN HEALTH AND SAFETY ELEMENT POLICIES**

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy HS-B.1: The County shall review project proposals to identify potential fire hazards and to evaluate the effectiveness of preventive measures to reduce the risk to life and property.</p>	<p>Consistent. Section 4.10 includes an evaluation of potential fire hazards. The Project is not located in a zone of very high fire severity hazard as defined by CAL FIRE. Regardless, fire prevention measures would be implemented in order to minimize fire risk.</p>
<p>Policy HS-B.5: The County shall require development to have adequate access for fire and emergency vehicles and equipment.</p>	<p>Consistent. The Project site would be accessible to emergency vehicles.</p>
<p>Policy HS-B.8: The County shall refer development proposals in the unincorporated county to the appropriate local fire agencies for review of compliance with fire safety standards. If dual responsibility exists, both agencies shall review and comment relative to their area of responsibility. If standards are different or conflicting, the more stringent standards shall apply.</p>	<p>Consistent. The Applicant would coordinate as needed with the Fresno County Fire District to address potential exposure to fire and other hazards in the Project site and would incorporate any standards or requirements required by the district.</p>
<p>Policy HS-D.3: The County shall require that a soils engineering and geologic-seismic analysis be prepared by a California-registered engineer or engineering geologist prior to permitting development, including public infrastructure projects, in areas prone to geologic or seismic hazards (i.e., fault rupture, groundshaking, lateral spreading, lurchcracking, fault creep, liquefaction, subsidence, settlement, landslides, mudslides, unstable slopes, or avalanche).</p>	<p>Consistent. According to the geotechnical investigation prepared for the Project site (see Appendix H1), geologic hazards at the site are not significant. There is no risk of fault rupture, and the Project would not lead to significant impacts related to seismic ground shaking, liquefaction, erosion, or subsidence.</p>
<p>Policy HS-D.4: The County shall require all proposed structures, additions to structures, utilities, or public facilities situated within areas subject to geologic-seismic hazards as identified in the soils engineering and geologic-seismic analysis to be sited, designed, and constructed in accordance with applicable provisions of the Uniform Building Code (Title 24 of the California Code of Regulations) and other relevant professional standards to minimize or prevent damage or loss and to minimize the risk to public safety.</p>	<p>Consistent. A site-specific soils engineering and geologic-seismic analysis has been prepared for the Project site (see Appendix H1). The Project would be constructed in compliance with the geotechnical and seismic design criteria required for construction in accordance with the California Building Code (CBC).</p>
<p>Policy HS-D.5: Pursuant to the Alquist-Priolo Earthquake Fault Zoning Act (Public Resources Code, Chapter 7.5), the County shall not permit any structure for human occupancy to be placed within designated Earthquake Fault Zones unless the specific provisions of the Act and Title 14 of the California Code of Regulations have been satisfied.</p>	<p>Consistent. While the Project site is not within a mapped Seismic Hazard Zone, the site may be subject to strong earthquake-related ground shaking at some point during the lifetime of the facility due to the potential for relatively large earthquakes to the south and west of the Project site. The Project would be constructed in compliance with the geotechnical and seismic design criteria required for construction in accordance with the CBC. The Project does not include structures for human occupancy.</p>
<p>Policy HS-D.8: The County shall require a soils report by a California-registered engineer or engineering geologist for any proposed development, including public infrastructure projects, that requires a County permit and is located in an area containing soils with high “expansive” or “shrink-swell” properties. Development in such areas shall be prohibited unless suitable design and construction measures are incorporated to reduce the potential risks associated with these conditions.</p>	<p>Consistent. The geotechnical investigation indicated that soils present at the Project site have a moderate to high potential for expansion. The Project would be required to comply with applicable building codes and structural improvements which would address any expansive soil hazards.</p>

TABLE I1-6 (CONTINUED)
FRESNO COUNTY GENERAL PLAN HEALTH AND SAFETY ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
<p>Policy HS-D.9: The County shall seek to minimize soil erosion by maintaining compatible land uses, suitable building designs, and appropriate construction techniques. Contour grading, where feasible, and revegetation shall be required to mitigate the appearance of engineered slopes and to control erosion.</p>	<p>Consistent. The Project would comply with a Construction General Permit, and implementation of a SWPPP would limit the impact of construction-related soil erosion by enacting BMPs to address sediment control and limit erosion, such as installation of silt fencing and implementation of temporary sediment disposal measures. Operation of the Project would not include activities that are likely to cause erosion. Following construction, the site could be replanted with low-growing plant species appropriate for maintaining soil quality.</p>
<p>Goal HS-F: To minimize the risk of loss of life, injury, serious illness, and damage to property resulting from the use, transport, treatment, and disposal of hazardous materials and hazardous wastes.</p>	<p>Consistent. The use, storage, transport, and disposal of hazardous materials in connection with the Project would be carried out in accordance with federal, state, and local regulations. BMPs in the SWPPP would minimize the risk of hazardous materials leakage include: reporting of spills of hazardous materials to the appropriate regulatory entities; immediate cleanup of hazardous materials spills; and excavation and appropriate disposal of contaminated soils.</p>
<p>Policy HS-F.1: The County shall require that facilities that handle hazardous materials or hazardous wastes be designed, constructed, and operated in accordance with applicable hazardous materials and waste management laws and regulations.</p>	<p>Consistent. The use, storage, transport, and disposal of hazardous materials in connection with the Project would be carried out in accordance with federal, state, and local regulations.</p>
<p>Policy HS-F.3: The County, through its Hazardous Materials Incident Response Plan, shall coordinate and cooperate with emergency response agencies to ensure adequate Countywide response to hazardous materials incidents.</p>	<p>Consistent. As identified in Section 4.10, <i>Hazards and Hazardous Materials</i>, the Project would not interfere with emergency response plans or times.</p>
<p>Policy HS-G.1: The County shall require that all proposed development incorporate design elements necessary to minimize adverse noise impacts on surrounding land uses.</p>	<p>Consistent. Short-term construction and decommissioning activities would be exempt from the County’s noise policies and standards because activities would occur between the hours of 6:00 a.m. and 9:00 p.m. on weekdays, or 7:00 a.m. and 9:00 p.m. on Saturdays and Sundays. Mitigation Measure 4.14-1b requires that the substation and invertors comply with the County noise standards through equipment selection and design measures.</p>
<p>Policy HS-G.4: So that noise mitigation may be considered in the design of new projects, the County shall require an acoustical analysis as part of the environmental review process where:</p> <ul style="list-style-type: none"> a) Noise sensitive land uses are proposed in areas exposed to existing or projected noise levels that are “generally unacceptable” or higher according to the Chart HS-1: “Land Use Compatibility for Community Noise Environments;” b) Proposed projects are likely to produce noise levels exceeding the levels shown in the County’s Noise Control Ordinance at existing or planned noise-sensitive uses. 	<p>Consistent. Section 4.14 includes an analysis of noise impacts associated with the Project.</p>
<p>Policy HS-G.6: The County shall regulate construction-related noise to reduce impacts on adjacent uses in accordance with the County’s Noise Control Ordinance.</p>	<p>Consistent. Short-term construction and decommissioning Project activities would be exempt from the County’s noise policies and standards because activities would occur between the hours of 6:00 a.m. and 9:00 p.m. on weekdays, or 7:00 a.m. and 9:00 p.m. on Saturdays and Sundays.</p>

TABLE I1-6 (CONTINUED)
FRESNO COUNTY GENERAL PLAN HEALTH AND SAFETY ELEMENT POLICIES

Goal/Objective/Policy Text	Project Consistency Evaluation
Policy HS-G.8: The County shall evaluate the compatibility of proposed projects with existing and future noise levels through a comparison to Chart HS-1, "Land Use Compatibility for Community Noise Environments."	Consistent. With the incorporation of Mitigation Measure 4.14-1a and -1b, the Project would not exceed County noise standards and would not have a significant impact to noise levels.

Appendix I2

Consistency with Fresno County's Solar Facility Guidelines

APPENDIX I2

Consistency with Fresno County’s Solar Facility Guidelines

**TABLE I2-1
PROJECT CONSISTENCY WITH FRESNO COUNTY SOLAR FACILITY GUIDELINES**

Guideline	Consistency
1) Information shall be submitted regarding the historical agricultural operational/usage of the parcel including, specific crop type, for the last 10 years (if no agricultural operation in the last 10 years, specify when land was last in agricultural use).	Information regarding the historical agricultural operation of the Project site is provided in Section 4.3, <i>Agriculture and Forestry Resources</i> . A detailed 10-year crop history for the Project site is provided in the Reclamation Plan included in Draft EIR Appendix B2.
2) Information shall be submitted that identifies the source of water for the subject parcel (surface water from irrigation district, individual well(s), conjunctive system). If the source of water is via district delivery, the applicant shall submit information documenting the allocations received from the irrigation district and the actual disposition of the water (i.e., utilized on-site or moved to other locations) for the last 10 years. If an individual well system is used, provide production capacity of each well, water quality data and data regarding the existing water table depth.	Information regarding Project water sources is described in Section 2.5.4.1, <i>Water and Wastewater</i> , and Section 4.19, <i>Utilities and Service Systems</i> . A Water Supply Assessment for the Project is provided in Appendix L.
3) Identify the current status of the parcel (Williamson Act Contract, Conservation Easement, retired land, etc.), the purpose of any easement and limitations of the parcel. The applicant shall submit a Title Report or Lot Book Guarantee for verification.	The current status of the parcels is detailed in Section 4.3, <i>Agriculture and Forestry Resources</i> . A Preliminary Title Report submitted for the Project site indicates that none of the parcels that make up the site is subject to a Williamson Act contract.
4) Identify (with supporting data) the current soil type and mapping units of the parcel pursuant to the standards of the California State Department of Conservation and the Natural Resources Conservation Service,	Soil types found on the Project site are described in Section 4.8, <i>Geology, Soils and Paleontological Resources</i> . Information provided with the Conditional Use Permit application submitted in March 2020 identifies soil types within the site and the site’s designation as “Farmland of Local Importance” by the State Department of Conservation’s Farmland Mapping and Monitoring Programs.
5) List all proposed measures and improvements intended to create a buffer between the proposed solar facility and adjacent agricultural operations (detailed information must be shown on site-plan) and provide factual/technical data supporting the effectiveness of said proposed buffering measures.	Proposed buffers are shown on the Site Plan provided with the March 2020 application materials. They also are described in Section 4.3, <i>Agriculture and Forestry Resources</i> .

TABLE I2-1 (CONTINUED)
PROJECT CONSISTENCY WITH FRESNO COUNTY SOLAR FACILITY GUIDELINES

Guideline	Consistency
6) Provide a Reclamation Plan detailing the lease life, timeline for removal of the improvements and specific measures to return the site to the agricultural capability prior to installation of solar improvements. If the project is approved, adequate financial security to the satisfaction of the County shall be provided to ensure site reclamation. Financial security can be in the form of a cash deposit to be placed in a trust account by the County with additional deposits required as needed to adjust for inflation and/or a Letter of Credit to be renewed every year to adjust for inflation.	The Reclamation Plan is described in Section 2.5.7, <i>Decommissioning and Site Reclamation</i> , and provided in Draft EIR Appendix B2.
7) Provide information documenting efforts to locate the proposed solar facility on non-agricultural lands and non-contracted parcels and detailed information explaining why the subject site was selected.	The evaluation of project alternatives is described in Chapter 3, <i>Alternatives</i> .
8) Develop and submit a project site pest management plan to identify methods and frequency to manage weeds, insects, disease and vertebrate pests that may impact adjacent sites.	An Integrated Pest Management Plan is provided in Draft EIR Appendix B1.
9) The applicant must acknowledge the County's Right to Farm Ordinance and shall be required to record a Right to Farm Notice prior to issuance of any permits. This shall be included as a recommended condition of approval of the land use entitlement.	The March 2020 Conditional Use Permit application materials submitted by the Applicant, Luna Valley Solar I, LLC, state, "The Applicant will acknowledge the County's Right to Farm Ordinance and will record a Right to Farm Notice." Recordation of this notice will be included as a condition of approval.
10) Note: The life of the approved land use permit will expire upon expiration of the initial life of the solar lease. If the solar lease is to be extended, approval of new land use permit will need to be obtained.	Not applicable. The Project site is currently owned by Westlands Water District, and is under a purchase option agreement with the Applicant, who intends to purchase the land prior to starting Project construction. Because the Project site will be owned by the Applicant, there will be no solar lease.
11) If the project is approved, the applicant shall make all reasonable efforts to establish a point of sale in Fresno County for equipment and construction related items necessary for the project.	As stated in materials accompanying the Applicant's March 2020 Conditional Use Permit application, the Applicant has committed to making reasonable efforts to establish a point of sale in Fresno County.
12) If the project is approved, the applicant shall make all reasonable efforts to conduct local recruitment efforts and/or coordinate with employment agencies in an attempt to hire from the local workforce.	As stated in materials accompanying the Applicant's March 2020 Conditional Use Permit application, the Applicant has committed to making reasonable efforts to hire from the local workforce.
13) In addition to disclosing the number of trips in the required project Operational Statement, the applicant shall disclose the weight of the shipments anticipated to the site. If the project is approved, pursuant to the CEQA analysis and based upon the existing road conditions and the weight/frequency of shipments to the site, the applicant shall mitigate impacts to County roads.	The Traffic Impact Study prepared for the Project (see Appendix K) included an analysis of potential pavement impacts, as required by Fresno County. Pavement impacts are analyzed based on a comparison of the TI with the Project to the TI without the Project. Based on the County's thresholds, the TI analysis concluded that construction of the Project would result in a less-than-significant impact to the pavement on roadways adjacent to the Project site (i.e., West Manning Avenue and SR 33).

TABLE I2-1 (CONTINUED)
PROJECT CONSISTENCY WITH FRESNO COUNTY SOLAR FACILITY GUIDELINES

Guideline	Consistency
14) If the project is approved, the applicant shall make all reasonable efforts to purchase products and equipment from local (Fresno County) manufacturing facilities and./or vendors.	As stated in materials accompanying the Applicant's March 2020 Conditional Use Permit application, the Applicant has committed to making reasonable efforts to purchase products and equipment from local manufacturers and vendors.

1.0 OVERVIEW

Tetra Tech, Inc. (Tetra Tech) has prepared this noise impact assessment for the proposed Luna Valley Solar Project (Project) to support a California Environmental Quality Act (CEQA) evaluation. The Project is proposed on approximately 1,300 acres of land located approximately 9 miles west-southwest of the City of Tranquillity within the unincorporated area of Levis in Fresno County. The Project consists of constructing and operating a photovoltaic solar electric generating facility and energy storage system and associated infrastructure that would produce up to 200 megawatts of power at the Point of Interconnection. The Project would include the construction of solar arrays, an electrical substation and electrical interconnection facilities, an energy storage system and other necessary infrastructure including an operation and maintenance building, septic system and leach field, a supervisory control and data acquisition system, a meteorological data system, buried conduit for electrical wires, overhead collector lines, on-site access roads and security fencing.

1.1 PROJECT SETTING

The Project site is located in unincorporated Fresno County and generally bound by flat, agricultural lands and other solar energy generating facilities. The nearest residences are located approximately 0.25 miles to the south, while other residences are scattered to the north, northwest, northeast, and south of the Project site. The nearest city is Tranquillity, which is located approximately 9 miles to the east-northeast of the Project site. Interstate 5, paralleled to the east by the California Aqueduct, is approximately 11 miles to the west as well as to the south of the Project area. The cities of Mendota and San Joaquin are approximately 10 miles north and east of the Project area, respectively. The San Joaquin Airport is roughly 9.5 miles east of the Project area.

Highway 33 (South Derrick Avenue) makes up the eastern boundary of the Project area. The western edge of the Project area is approximately 2,600 feet east of S. Bernardino Avenue, the northern edge is approximately 1,400 feet south of W. South Avenue, and the southern edge is approximately 1,300 feet north of W. Dinuba Avenue. W. Manning Avenue cuts through the approximate middle of the Project area from east to west and S. Ohio Avenue cuts through the approximate middle of the Project area from north to south. Figure 1 provides an overview of the Project site as well as the surrounding area.

1.2 ACOUSTIC METRICS AND TERMINOLOGY

All sounds originate with a source, whether it is a human voice, motor vehicles on a roadway, or a combustion turbine. Energy is required to produce sound and this sound energy is transmitted through the air in the form of sound waves – tiny, quick oscillations of pressure just above and just below atmospheric pressure. These oscillations, or sound pressures, impinge on the ear, creating the sound we hear. A sound source is defined by a sound power level (abbreviated “LW”), which is independent of any external factors. By definition, sound power is the rate at which acoustical energy is radiated outward and is expressed in units of watts.

A source sound power level cannot be measured directly. It is calculated from measurements of sound intensity or sound pressure at a given distance from the source outside the acoustic and geometric near-field. A sound pressure level (abbreviated “L_P”) is a measure of the sound wave fluctuation at a given receiver location and can be obtained through the use of a microphone or calculated from information about the source sound power level and the surrounding environment. The sound pressure level in decibels (dB) is the logarithm of the ratio of the sound pressure of the source to the reference sound pressure of 20 microPascals (μPa), multiplied by 20.1. The range of sound pressures that can be detected by a person with normal hearing is very wide, ranging from about 20 μPa for very faint sounds at the threshold of hearing, to nearly 10 million μPa for extremely loud sounds such as a jet during take-off at a distance of 300 feet.

NOT FOR CONSTRUCTION

Broadband sound includes sound energy summed across the entire audible frequency spectrum. In addition to broadband sound pressure levels, analysis of the various frequency components of the sound spectrum can be completed to determine tonal characteristics. The unit of frequency is hertz (Hz), measuring the cycles per second of the sound pressure waves. Typically, the frequency analysis examines 11 octave bands ranging from 16 Hz (low) to 16,000 Hz (high). Since the human ear does not perceive every frequency with equal loudness, spectrally-varying sounds are often adjusted with a weighting filter. The A-weighted filter is applied to compensate for the frequency response of the human auditory system and is represented in A-Weighted Decibel (dBA).

Sound can be measured, modeled, and presented in various formats, with the most common metric being the equivalent sound level (L_{eq}). The L_{eq} has been shown to provide both an effective and uniform method for comparing time-varying sound levels and is widely used in acoustic assessments in the State of California. Estimates of noise sources and outdoor acoustic environments, and the comparison of relative loudness are presented in Table 1. Table 2 presents additional reference information on terminology used in the report.

Table 1. Sound Pressure Levels (L_p) and Relative Loudness of Typical Noise Sources and Acoustic Environments

Noise Source or Activity	Sound Level (dBA)	Subjective Impression
Vacuum cleaner (10 feet)	70	Moderate
Passenger car at 65 miles per hour (25 feet)	65	
Large store air-conditioning unit (20 feet)	60	
Light auto traffic (100 feet)	50	Quiet
Quiet rural residential area with no activity	45	
Bedroom or quiet living room; Bird calls	40	Faint
Typical wilderness area	35	
Quiet library, soft whisper (15 feet)	30	Very quiet
Wilderness with no wind or animal activity	25	Extremely quiet
High-quality recording studio	20	
Acoustic test chamber	10	Just audible
	0	Threshold of hearing

Adapted from: Kurze and Beranek (1988) and USEPA (1971)

Table 2. Acoustic Terms and Definitions

Term	Definition
Noise	Typically defined as unwanted sound. This word adds the subjective response of humans to the physical phenomenon of sound. It is commonly used when negative effects on people are known to occur.
Sound Pressure Level (L_p)	Pressure fluctuations in a medium. Sound pressure is measured in dB referenced to 20 μ Pa, the approximate threshold of human perception to sound at 1,000 Hz.
Sound Power Level (L_w)	The total acoustic power of a noise source measured in dB referenced to picowatts (one trillionth of a watt). Noise specifications are provided by equipment manufacturers as sound power as it is independent of the environment in which it is located. A sound level meter does not directly measure sound power.

Term	Definition
Equivalent Sound Level (L_{eq})	The L_{eq} is the continuous equivalent sound level, defined as the single sound pressure level that, if constant over the stated measurement period, would contain the same sound energy as the actual monitored sound that is fluctuating in level over the measurement period.
A-Weighted Decibel (dBA)	Environmental sound is typically composed of acoustic energy across all frequencies. To compensate for the auditory frequency response of the human ear, an A-weighting filter is commonly used for describing environmental sound levels. Sound levels that are A-weighted are presented as dBA in this report.
Unweighted Decibels (dBL)	Unweighted sound levels are referred to as linear. Linear decibels are used to determine a sound's tonality and to engineer solutions to reduce or control noise as techniques are different for low and high frequency noise. Sound levels that are linear are presented as dBL in this report.
Propagation and Attenuation	Propagation is the decrease in amplitude of an acoustic signal due to geometric spreading losses with increased distance from the source. Additional sound attenuation factors include air absorption, terrain effects, sound interaction with the ground, diffraction of sound around objects and topographical features, foliage, and meteorological conditions including wind velocity, temperature, humidity, and atmospheric conditions.

1.3 VIBRATION METRICS AND TERMINOLOGY

Vibration is an oscillatory motion that is described in terms of displacement, velocity, or acceleration. Velocity is the most common descriptor used when evaluating human perception or structural damage. Velocity represents the instantaneous speed of movement and more accurately describes the response of humans, buildings, and equipment to vibrations.

Peak-Particle-Velocity (PPV) and root mean square velocity are typical metrics used to describe vibration levels in units of inches per second in the United States. However, to evaluate annoyance to humans, the vibration dB (VdB) notation is commonly used. The decibel notation acts to compress the range of numbers required to describe vibration. In the United States, the accepted velocity reference for converting to dB is 1×10^{-6} inches per second. The abbreviation "VdB" is used for vibration dB to reduce the potential for confusion with sound decibels.

In contrast to airborne noise, ground-borne vibration is not an everyday occurrence for humans. The background vibration velocity levels within residential areas are usually 50 VdB or lower, which is well below the human perception threshold of approximately 65 VdB. However, human response to vibration is not usually significant unless the vibration exceeds 70 VdB. Outdoor sources that generate perceptible ground-borne vibrations are typically construction equipment, steel-wheeled trains, and traffic on rough roadways. Table 3 provides common vibration sources as well as human and structural response to ground-borne vibrations.

Table 3. Typical Levels of Ground-Borne Vibration

Human/Structural Response	PPV (in/sec)	Velocity Level (VdB)*	Typical sources (50 feet from source)
Threshold, Minor Cosmetic Damage, Fragile Buildings	0.4	100	Blasting from Construction Projects
	0.17-0.2	92-94	Heavy Tracked Construction Equipment
Difficulty with Tasks, Such as Reading a Computer Screen	0.125	90	
	0.074	85	Commuter Rail, Upper Range
Residential Annoyance, Infrequent Events	0.04	80	Rapid Transit, Upper Range
	0.013	75	Commuter Rail, Typical
	0.023	72	Bus or Truck Bump Over

Human/Structural Response	PPV (in/sec)	Velocity Level (VdB)*	Typical sources (50 feet from source)
Residential Annoyance, Frequent Events	0.013	70	Rapid Transit, Typical
Approximate Threshold of Human Perception	0.007	65	
	0.005	62	Bus or Truck, Typical
	0.0013	50	Typical Background Vibration Levels

*RMS Vibration Velocity in VdB reference to 10⁻⁶ inches/second
Source: FTA (2006)

The degree of annoyance cannot always be explained by the magnitude of the vibrations alone. Phenomena, such as ground-borne noise and rattling, visual effects (e.g., movement of hanging objects), and time of day, all influence the response of individuals. The American National Standards Institute (ANSI) and the International Organization for Standardization (ISO) has developed criteria for evaluation of human exposure to vibrations. The recommendations of these standards and other studies evaluating human response to vibrations have been incorporated into the Federal Transit Administration's (FTA) Transit Noise and Vibration Impact Assessment Manual (May 2006). The criteria within this manual are used to assess noise and vibration impacts from transit operations.

1.4 NOISE AND VIBRATION LEVEL REQUIREMENT AND GUIDELINES

Potential noise impacts associated with the Project were evaluated with respect to the applicable noise requirements prescribed by CEQA, the Fresno County General Plan Health and Safety Element (Fresno County 2000), and the Fresno County Noise Control Ordinance (Fresno County Code of Ordinances Chapter 8.40) (Fresno County 2020). Details regarding each set of requirements are provided below.

1.4.1 California Environmental Quality Act

CEQA requires that significant environmental impacts be identified and that such impacts be eliminated or mitigated to the extent feasible. Appendix G of the CEQA Statutes and Guidelines (State Clearing House, Office of Planning and Research and the Natural Resources Agency, 2016) sets forth a series of suggested thresholds for determining a potentially significant impact. Under the thresholds suggested in Appendix G, the proposed project could be considered to have significant noise and vibration impacts if it results in one or more of the following:

- a) Generation of substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or in other applicable local, state, or federal standards?
- b) Generation of excessive groundborne vibration or groundborne noise level?
- c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan had not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

The CEQA Statutes and Guidelines Appendix G thresholds for items (c) and (d) do not define the term "substantial"; however, the California Energy Commission provides guidelines for operational noise or permanent increases which indicate that an increase of 5 dBA over ambient conditions may be significant and an increase of 10 dBA is significant (CEC 2010).

1.4.2 Fresno County General Plan Health and Safety Element

The Fresno County General Plan includes a Health and Safety Element with noise policies to manage sources of noise and protect noise sensitive land uses. Implementation of the General Plan anticipates

growth of population, employment, and developed land uses as shown in the Project Description. Expansion of County-wide population, employment, and developed land uses each lead to the expansion of activities that have the potential to generate adverse noise effects.

The Draft General Plan contains the following policies to address noise.

Policy HS-G.1 The County shall require that all proposed development incorporate design elements necessary to minimize adverse noise impacts on surrounding land uses.

Policy HS-G.2 The County shall require new roadway improvement projects to achieve and maintain the normally acceptable noise levels shown in Chart HS-1: "Land Use Compatibility for Community Noise Environments."

Policy HS-G.3 The County shall allow the development of new noise-sensitive land uses (which include, but are not limited to, residential neighborhoods, schools, and hospitals) only in areas where existing or projected noise levels are "acceptable" according to the Chart HS-1: "Land Use Compatibility for Community Noise Environments." Noise mitigation measures may be required to reduce noise in outdoor activity areas and interior spaces to these levels.

Policy HS-G.4 So that noise mitigation may be considered in the design of new projects, the County shall require an acoustical analysis as part of the environmental review process where:

- a. Noise sensitive land uses are proposed in areas exposed to existing or projected noise levels that are "generally unacceptable" or higher according to the Chart HS-1: "Land Use Compatibility for Community Noise Environments;"
- b. Proposed projects are likely to produce noise levels exceeding the levels shown in the County's Noise Control Ordinance at existing or planned noise-sensitive uses.

Policy HS-G.5 Where noise mitigation measures are required to achieve acceptable levels according to land use compatibility or the Noise Control Ordinance, the County shall place emphasis of such measures upon site planning and project design. These measures may include, but are not limited to, building orientation, setbacks, earthen berms, and building construction practices. The County shall consider the use of noise barriers, such as soundwalls, as a means of achieving the noise standards after other design-related noise mitigation measures have been evaluated or integrated into the project.

Policy HS-G.6 The County shall regulate construction-related noise to reduce impacts on adjacent uses in accordance with the County's Noise Control Ordinance.

Policy HS-G.7 Where existing noise-sensitive uses may be exposed to increased noise levels due to roadway improvement projects, the County shall apply the following criteria to determine the significance of the impact:

- a. Where existing noise levels are less than 60 dB Ldn at outdoor activity areas of noise-sensitive uses, a 5 dB Ldn increase in noise levels will be considered significant;
- b. Where existing noise levels are between 60 and 65 dB Ldn at outdoor activity areas of noise-sensitive uses, a 3 dB Ldn increase in noise levels will be considered significant; and
- c. Where existing noise levels are greater than 65 dB Ldn at outdoor activity areas of noise-sensitive uses, a 1.5 dB Ldn increase in noise levels will be considered significant.

Policy HS-G.8 The County shall evaluate the compatibility of Proposed Projects with existing and future noise levels through a comparison to Chart HS-1, “Land Use Compatibility for Community Noise Environments.”

Policy HS-G.9 The County shall not allow the development of new residential land uses in areas exposed to existing or projected levels of noise from aircraft operations at any airport or air base which exceed 60 dB Ldn or Community Noise Equivalent Level.

1.4.3 Fresno County Noise Control Ordinance

Section 8.40 of the Fresno County Code of Ordinances provides the Fresno County Noise Control Ordinance (Ordinance) which (establishes standards concerning acceptable noise levels for both noise-sensitive land uses and for noise-generating land uses). This section presents standards and requirements for noise measurements, exterior noise standards, interior noise standards, increases in allowable noise levels, reductions in allowable noise levels, and exempt noise. Table 4 describes the allowable exterior noise levels as measured at any affected single- or multiple-family residence, school, hospital, church, or public library situation in either the incorporated or unincorporated area. The table demonstrates that a continuous source may emit up to 50 dBA during the day (7:00 a.m. to 10:00 p.m.) and 45 dBA during the night (10:00 p.m. to 7:00 a.m.) to residential land uses.

Table 4. Exterior Noise Standards

Category	Cumulative number of minutes in any one-hour time period	Noise Level Standards, dBA	
		Daytime 7 a.m. to 10 p.m.	Nighttime 10 p.m. to 7 a.m.
1	30	50	45
2	15	55	50
3	5	60	55
4	1	65	60
5	0	70	65

In the event the measured ambient noise level exceeds the applicable noise level standard in any category above, the applicable standard shall be adjusted so as to equal the ambient noise level. Each of the noise level standards specified above shall be reduced by 5 dBA for simple tone noises, noises consisting primarily of speech or music, or for recurring impulsive noises. If the intruding noise source is continuous and cannot reasonably be discontinued or stopped for a time period whereby the ambient noise level can be measured, the noise level measured while the source is in operation shall be compared directly to the noise level standards.

In Section 8.40.060, the Ordinance exempts noise sources associated with construction, provided such activities do not take place before 6 a.m. or after 9 p.m. on any day except Saturday or Sunday, or before 7 a.m. or after 5 p.m. on Saturday or Sunday.

Section 8.40.090 of the Ordinance states noise sources associated with the operation of electrical substation shall not exceed 50 dBA when measured at noise sensitive areas.

1.4.4 Federal Transit Authority Construction Noise Guidelines

There is no standardized state or federal regulatory standards developed for assessing construction noise impacts. However, the FTA has developed and published a guideline criterion that is considered to be reasonable to assess noise impacts from construction operations. The FTA criteria is summarized in Table 5 below.

Table 5. Federal Transit Authority Construction Noise Criteria

Land Use	8-hour (dBA L_{eq})		30-Day Average L_{dn} (dB) or L_{eq} (dBA)
	Day	Night	
Residential	80	70	75 ^a
Commercial	85	85	80 ^b
Industrial	90	90	85 ^b

^a In urban areas with very high ambient noise levels ($L_{dn} > 65$ dB), L_{dn} from construction operations should not exceed existing ambient + 10 dB.

^b Twenty-four-hour L_{eq} , not L_{dn} .

2.0 EXISTING SOUND ENVIRONMENT

Tetra Tech conducted a series of ambient sound level measurements to characterize the existing acoustic environment near the Project during both daytime and nighttime periods. This section summarizes the methodology used by Tetra Tech to conduct the sound survey and describes the measurement locations.

2.1 FIELD METHODOLOGY

To document the existing conditions, baseline sound level measurements were performed on May 28, 2020. The measurement locations were selected to be representative of the surroundings of potential receptors nearest to the proposed Project site in the principal geographical directions. The ambient sound survey included short-term measurements in the presence of an acoustics expert for a minimum duration of 30 minutes. The short-term measurements were made during both daytime (10:00 a.m. to 4:00 p.m.) and nighttime (10:00 p.m. to 2:00 a.m.) periods at noise-sensitive areas in proximity to residential structures.

All the measurements were conducted using a Larson Davis Model 831 precision integrating sound-level meter that meets the requirements of ANSI Standards for Type 1 precision instrumentation. This sound analyzer has an operating range of 5 dB to 140 dB, and an overall frequency range of 8 to 20,000 Hz. During the measurement program, microphones were fitted with a windscreen, set upon a tripod at a height of approximately 1.5 meters (5 feet) above the ground and located out of the influence of any vertical reflecting surfaces. The sound analyzer was calibrated at the beginning and end of the measurement period using a Larson Davis Model CAL200 acoustic calibrator following procedures that are traceable to the National Institute of Standards and Technology. Table 6 lists the measurement equipment employed during the survey. The sound level meters were programmed to sample and store A-weighted and octave band sound level data, including L_{eq} and the percentile sound levels.

Table 6. Measurement Equipment

Description	Manufacturer	Type
Signal Analyzer	Larson Davis	831
Preamplifier	Larson Davis	PRM902
Microphone	PCB	377B02
Windscreen	ACO Pacific	7-inch
Calibrator	Larson Davis	CAL200

During the survey, weather conditions were conducive to accurate data collection. Weather conditions were mainly sunny with few clouds and no precipitation occurring during the measurement period. Temperatures ranged from 89 to 105 degrees Fahrenheit during the day, and 82 to 87 degrees Fahrenheit during the night.

2.2 FIELD MEASUREMENTS

Three short-term, attended sound measurements were performed at public locations near residential properties proximate to the Project site. The monitoring locations (ML-1 through ML-3) were selected to represent ambient conditions at land uses in the vicinity of the Project site. The short-term monitoring locations are described in Table 7 and mapped on Figure 1. In addition to the monitoring locations, there is a residential noise sensitive area (NSA-1) that is approximately 0.3 miles south of the Project site boundary. Sound measurements were not able to be taken at this location due to it being located on a private road. Additional descriptions of the monitoring locations and field observations are provided below.

Table 7. Sound Level Monitoring Locations

Monitoring Location	Coordinates (Universal Transverse Mercator Zone 10S)		Distance and Direction from Project Site Boundary
	Easting (m)	Northing (m)	
ML-1	731814	4057238	1.3 miles north
ML-2	733771	4052431	0.3 miles southeast
ML-3	734235	4057287	1.3 miles northeast

2.2.1 Location ML-1

This monitoring location is located near the intersection of W. Adams Avenue and S. Ohio Avenue, approximately 1.2 miles from the Project site northern boundary line. This location represents the closest residence to the north.

During the daytime measurement period, noise generated by traffic on W. Adams Avenue was dominant. Noise from insects and gusts of wind were also present during the daytime measurements. During the nighttime measurement period, the traffic decreased but noise from dogs was present.

2.2.2 Location ML-2

This monitoring location is located near the intersection of W. Dinuba Avenue and Route 33, approximately 0.3 miles southeast from the Project site boundary line. This location represents the closest accessible residence to the south.

During the daytime measurement period, noise generated by traffic on Route 33 was dominant. Nighttime measurements were not taken at this location.

2.2.3 Location ML-3

This monitoring location is located near the intersection of W. Adams Avenue and Route 33, approximately 1.3 miles northeast from the Project Site boundary line. This location represents the second closest residence to the north.

During the daytime measurement period, noise generated by traffic on W. Adams Avenue was dominant. There was also moderate wind during the daytime period. Nighttime measurements were not taken at this location.

2.3 MEASUREMENT RESULTS

Table 8 provides a summary of the measured ambient sound levels observed at each of the monitoring locations for both the daytime and nighttime L_{eq} . While nighttime measurements were not able to be taken at ML-2 and ML-3, the daytime measurement results between all monitoring locations were within 2 dB, and as such, the nighttime measurement results were assumed to follow a similar trend. Thus, the nighttime results for ML-1 were applied to ML-2 and ML-3.

Table 8. Sound Measurement Results – L_{eq} Sound Levels

Monitoring Location	Time Period	L_{eq} (dBA)
ML-1	Day	34
	Night	33
ML-2	Day	34
	Night	33*
ML-3	Day	32
	Night	33*

*Nighttime results for ML-1 were applied to ML-2 and ML-3

Ambient sound levels did exhibit typical diurnal patterns. Daytime L_{eq} sound levels at the measurement locations ranged from a low of 32 dBA at ML-3 to a high of 34 dBA at ML-1 and ML-2. Nighttime sound levels were 33 dBA at ML-1.

Sound measurements were not able to be taken at NSA-1, so the measured ambient levels at the closest monitoring location (ML-2) were applied for assessment purposes.

3.0 PROJECT CONSTRUCTION

Construction of the Project is expected to be typical of other solar power generating facilities in terms of schedule, equipment, and activities. Construction is anticipated to occur over approximately 16 months and would require a variety of equipment and vehicles. The equipment and vehicles would comply with noise requirements in Section 8.40.060 of the Fresno County Noise Control Ordinance. Temporary construction, maintenance, repair, or demolition activities between 6:00 a.m. and 9:00 p.m. (except Sundays and federal holidays) are exempt from the noise regulations. The Project would comply with this regulation and applicable conditions related to noise.

3.1 NOISE CALCULATION METHODOLOGY

Acoustic emission levels for activities associated with Project construction were based upon typical ranges of energy equivalent noise levels at construction sites, as documented by the United States Environmental Protection Agency (USEPA 1971) and the USEPA's "Construction Noise Control Technology Initiatives" (USEPA 1980). The USEPA methodology distinguishes between type of construction and construction stage.

Using those energy equivalent noise levels as input to a basic propagation model, construction noise levels were calculated at the nearest Project site boundary, the three MLs, and NSA-1.

The basic model assumed spherical wave divergence from a point source located at the closest boundary line of the Project site to each receptor. Furthermore, the model conservatively assumed that all pieces of construction equipment associated with an activity would operate simultaneously for the duration of that activity. An additional level of conservatism was built into the construction noise model by excluding

potential shielding effects due to intervening structures and buildings along the propagation path from the site to receiver locations.

3.2 PROJECTED NOISE LEVELS DURING CONSTRUCTION

Table 9 summarizes the projected noise levels due to Project construction, organized into the following three broad work stages:

1. Mobilization, site preparation, fencing, laydown, and trenching;
2. Cable install, trench backfill, pile driving and racking install, inverter install, module install, and BESS install; and
3. Inverter, pile driving and racking install, module, BESS install, commissioning and testing.

Based on sound propagation calculations, construction sound levels are predicted to range from 48 to 66 dBA at the MLs and NSA-1. Periodically, sound levels may be higher or lower than those presented in Table 9; however, the overall sound levels should generally be lower due to excess attenuation and the trend toward quieter construction equipment in the intervening decades since this data was developed. As shown in Table 9, the highest projected sound level from construction-related activity is expected to occur at ML-2 and NSA-1 during activities associated with Stage 2.

Table 9. Projected Construction Noise Levels by Stage (dBA L_{eq})

Construction Stage	USEPA Construction Noise Level 50 feet	ML-1	ML-2	ML-3	NSA-1
Stage 1	90	48	60	48	60
Stage 2	96	53	66	53	66
Stage 3	95	52	65	52	65

The construction of the Project may cause short-term, but unavoidable noise impacts that could be loud enough at times to temporarily interfere with speech communication outdoors and indoors with windows open at NSA-1 and ML-2. The noise levels resulting from the construction activities would vary significantly depending on several factors such as the type and age of equipment, specific equipment manufacture and model, the operations being performed, and the overall condition of the equipment and exhaust system mufflers.

Project construction would occur between 6:00 a.m. and 9:00 p.m., Monday through Friday in compliance with the County's Code. Furthermore, all reasonable efforts would be made to minimize the impact of noise resulting from construction activities including implementation of standard noise reduction measures. Due to the infrequent nature of loud construction activities at the site, the limited hours of construction and the implementation of noise mitigation measures, the temporary increase in noise due to construction is considered to be a less than significant impact.

3.3 CONSTRUCTION NOISE MITIGATION

Since construction machines operate intermittently, and the types of machines in use at the Project site change with the stage of construction, noise emitted during construction would be mobile and highly variable, making it challenging to control. The construction management protocols would include the following noise mitigation measures to minimize noise impacts:

- Maintain all construction tools and equipment in good operating order according to manufacturers' specifications;
- Limit use of major excavating and earth-moving machinery to daytime hours;

- To the extent practicable, schedule construction activity during normal working hours on weekdays when higher sound levels are typically present and are found acceptable. Some limited activities, such as concrete pours, would be required to occur continuously until completion;
- Equip any internal combustion engine used for any purpose on the job or related to the job with a properly operating muffler that is free from rust, holes, and leaks;
- For construction devices that utilize internal combustion engines, ensure the engine's housing doors are kept closed, and install noise-insulating material mounted on the engine housing consistent with manufacturers' guidelines, if possible;
- Limit possible evening shift work to low noise activities such as welding, wire pulling, and other similar activities, together with appropriate material handling equipment; and
- Utilize a Complaint Resolution Procedure to address any noise complaints received from residents.

3.4 VIBRATION CALCULATION METHODOLOGY

Vibration levels for activities associated with Project construction were based on the average of source levels in PPV published with the FTA (2006) Noise and Vibration Manual, which documents several types of construction equipment measured under a wide variety of construction activities. Using the documented vibration levels as input into a basic propagation model, construction vibration levels were calculated at the nearest Project site boundary and then at the MLs and NSA-1.

3.5 PROJECTED VIBRATION LEVELS DURING CONSTRUCTION

As discussed in Section 3.2, Project construction would be completed in three work stages. This vibration level evaluated the worst-case vibration source, which would be pile driving. Based on vibration propagation calculations, construction vibration levels are predicted to range from 0.0001 PPV inches per second (in/sec; 31 VdB) to 0.0013 PPV in/sec (50 VdB) dBA at the MLs. These levels are based on the worst-case vibration producing equipment and it is expected that other vibration generating equipment proposed for the Project construction would result in lower vibration levels. Table 10 summarizes the predicted vibration levels at each of the MLs based on the highest vibration generating equipment. As shown in Table 10, the Project construction would demonstrate vibration levels below the human perception threshold of approximately 65 VdB.

Table 10. Projected Construction Vibration Levels

Construction Operation	Vibration Level Metric	FTA Construction Vibration Level (25 feet)	ML-1	ML-2	ML-3	NSA-1
Pile Driving	PPV in/sec	0.644	0.0001	0.0013	0.0001	0.0013
	VdB	104	31	50	31	50

4.0 OPERATIONAL NOISE

This section describes the model utilized for the assessment; input assumptions used to calculate noise levels due to the Project's normal operation; a conceptual noise mitigation strategy, and the results of the noise impact analysis.

4.1 NOISE PREDICTION MODEL

The Cadna-A® computer noise model was used to calculate sound pressure levels from the operation of the Project equipment in the vicinity of the Project site. An industry standard, Cadna-A® was developed by DataKustik GmbH to provide an estimate of sound levels at distances from sources of known

emission. It is used by acousticians and acoustic engineers due to the capability to accurately describe noise emission and propagation from complex facilities consisting of various equipment types like the Project and in most cases, yields conservative results of operational noise levels in the surrounding community.

The current ISO standard for outdoor sound propagation, ISO 9613 Part 2 – “Attenuation of Sound during Propagation Outdoors,” was used within Cadna-A (ISO 1996). The method described in this standard calculates sound attenuation under weather conditions that are favorable for sound propagation, such as for downwind propagation or atmospheric inversion, conditions which are typically considered worst-case. The calculation of sound propagation from source to receiver locations consists of full octave band sound frequency algorithms, which incorporate the following physical effects:

- Geometric spreading wave divergence;
- Reflection from surfaces;
- Atmospheric absorption at 10 degrees Celsius and 70 percent relative humidity;
- Screening by topography and obstacles;
- The effects of terrain features including relative elevations of noise sources;
- Sound power levels from stationary and mobile sources;
- The locations of noise-sensitive land use types;
- Intervening objects including buildings and barrier walls, to the extent included in the design;
- Ground effects due to areas of pavement and unpaved ground;
- Sound power at multiple frequencies;
- Source directivity factors;
- Multiple noise sources and source type (point, area, and/or line); and
- Averaging predicted sound levels over a given time.

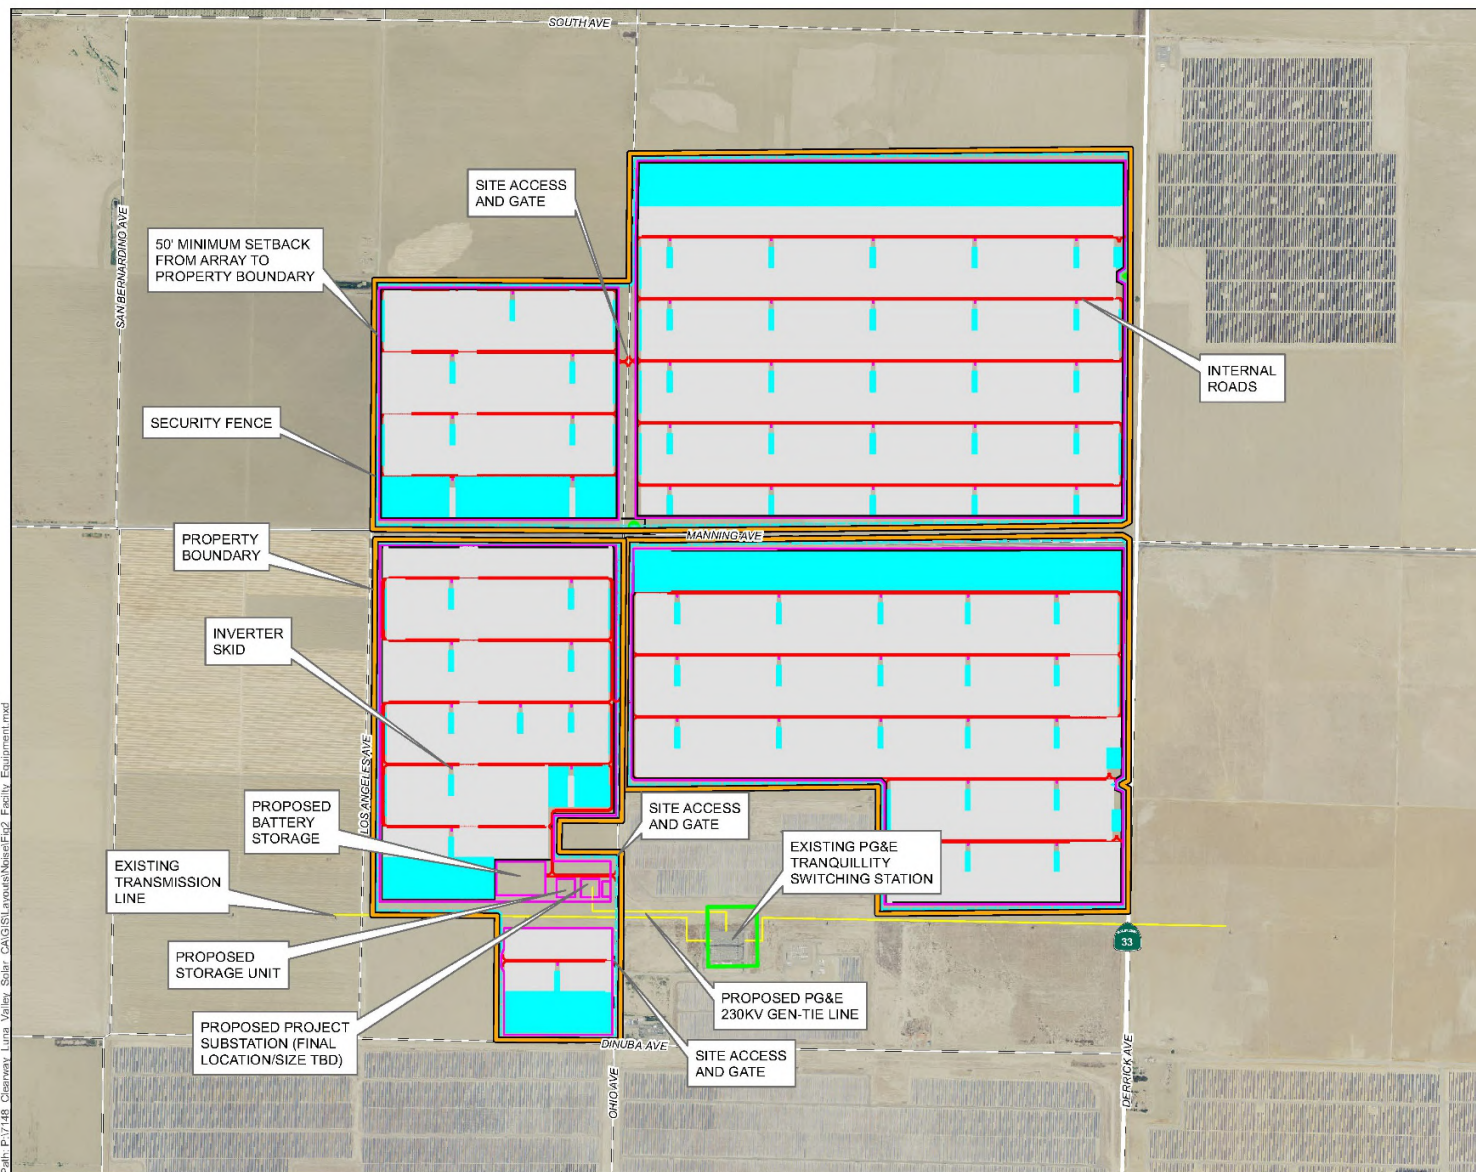

Cadna-A allows for three basic types of sound sources to be introduced into the model: point, line, and area sources. Each noise-radiating element was modeled based on its noise emission pattern. Larger dimensional sources such as the transformers and inverters were modeled as area sources.

Off-site topography was obtained using the publicly available United States Geological Survey digital elevation data. A default ground attenuation factor of 0.5 was assumed for off-site sound propagation over acoustically “mixed” ground. A ground attenuation factor of 0.0 for a reflective surface was assumed for paved onsite areas.

The output from Cadna-A includes tabular sound level results at selected receiver locations and colored noise contour maps (isopleths) that show areas of equal and similar sound levels.

4.2 INPUT TO THE NOISE PREDICTION MODEL

The Project’s general arrangement was reviewed and directly imported into the acoustic model so that on-site equipment could be easily identified; buildings and structures could be added; and sound emission data could be assigned to sources as appropriate. Figure 2 shows the Project equipment layout based on Engineering Drawing No. E200 dated March 13, 2020, which Clearway provided to Tetra Tech on March 13, 2020.

The primary noise sources during operations are the inverters, transformers, battery storage liquid cooling units, and battery storage inverters. It is expected that all equipment would operate during the daytime period. During the nighttime period the battery storage would discharge electricity resulting in the operation only of the battery storage liquid cooling units, battery storage inverters, and substation transformer. It is assumed that the solar panel inverters and the solar panel inverter distribution transformers would not operation during the nighttime period. Reference sound power levels input to Cadna-A were provided by equipment manufacturers, based on information contained in reference documents or developed using empirical methods. The source levels used in the predictive modeling are based on estimated sound power levels that are generally deemed to be conservative. The projected operational noise levels are based on Applicant-supplied sound power level data for the major sources of equipment. Table 11 summarizes the equipment sound power level data used as inputs to the initial modeling analysis.

Table 11. Modeled Octave Band Sound Power Level (L_p) for Major Pieces of Project Equipment

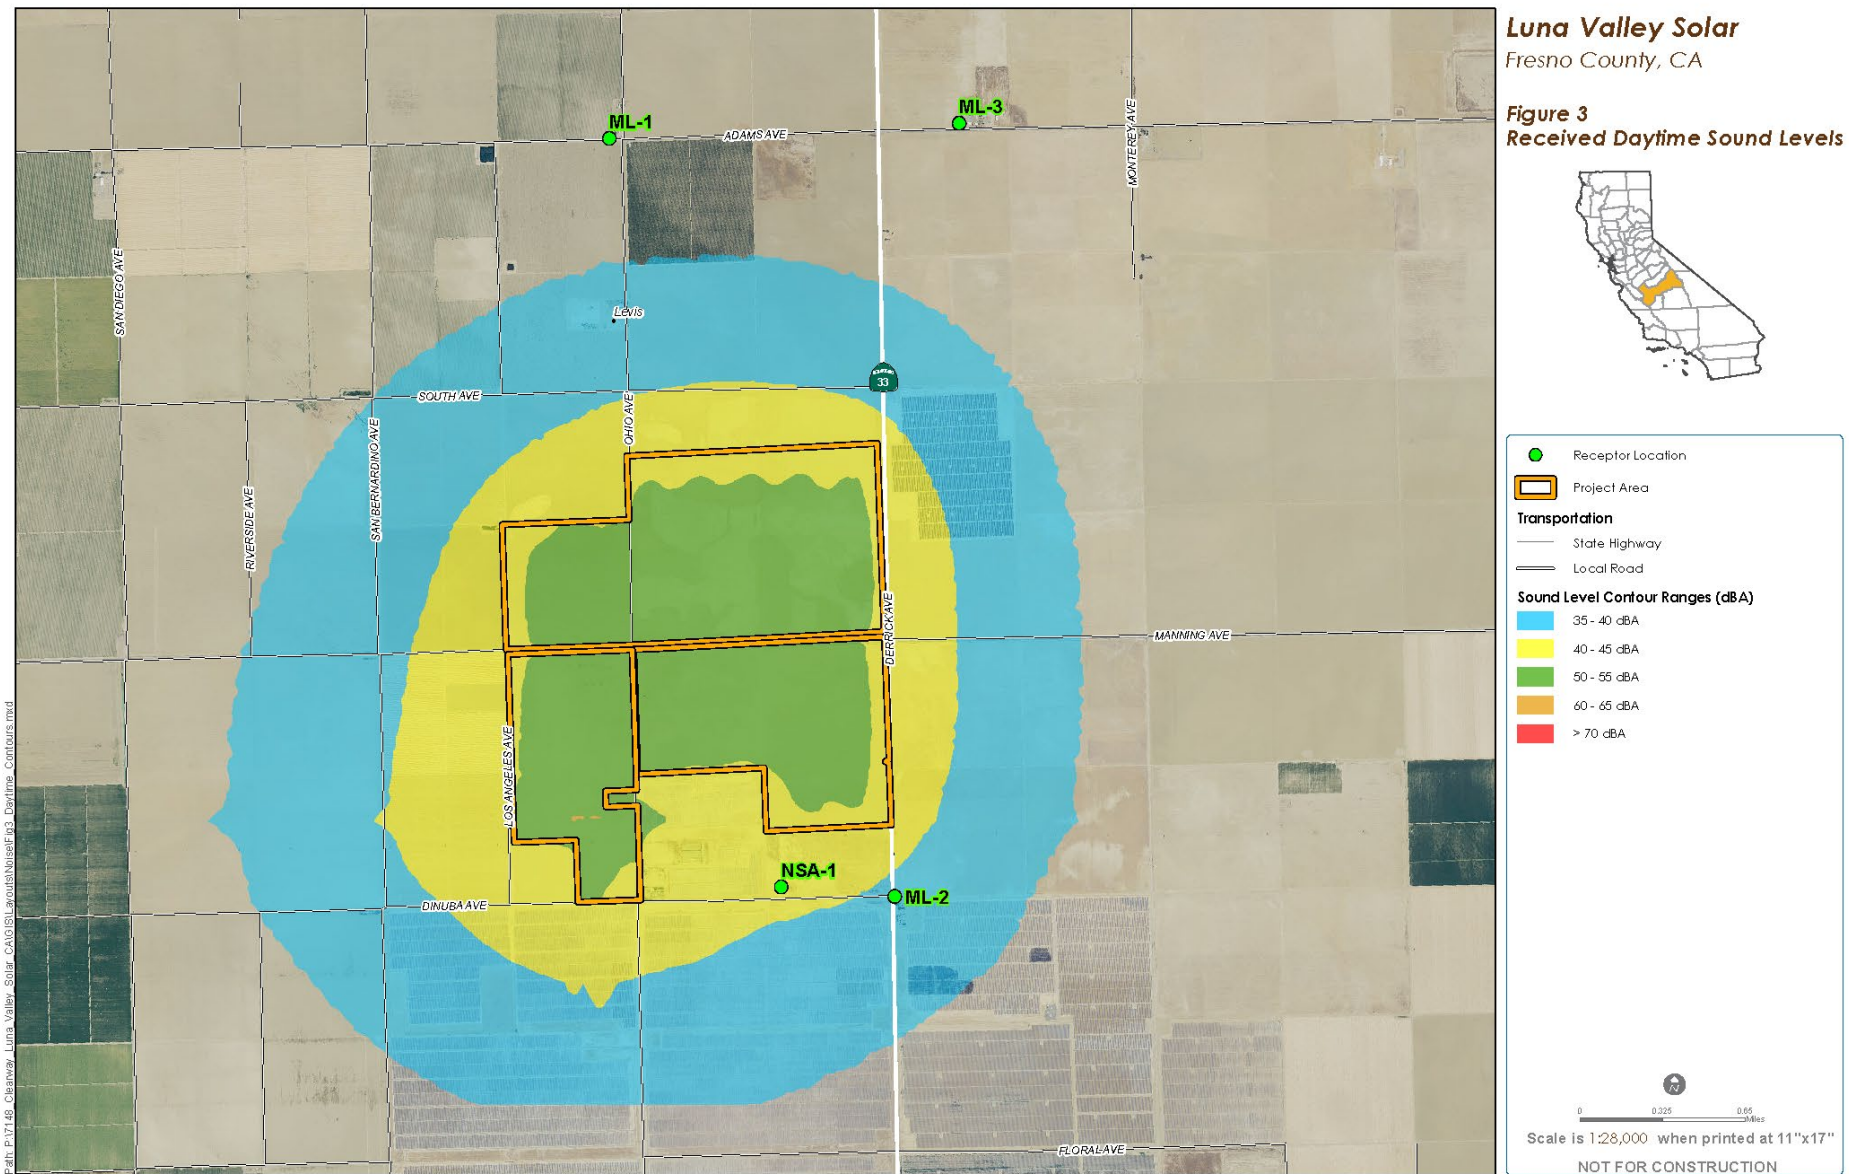

Sound Source	Sound Power Level (L_p) by Octave Band Frequency dBL									Broadband Level
	31.5	63	125	250	500	1k	2k	4k	8k	dBA
Inverter ¹	72	80	87	88	87	84	79	72	65	93
Inverter Distribution Transformer	69	75	77	72	72	66	61	56	49	81
Substation Transformer	82	88	90	85	85	79	74	69	62	94
Battery Storage liquid Cooling Unit	79	74	71	64	68	52	46	39	34	61

¹Sound source represents both the solar panel inverters as well as the battery storage inverters.

4.3 NOISE PREDICTION MODEL RESULTS

Broadband (dBA) sound pressure levels were calculated for expected normal Project operation assuming that all components identified previously are operating continuously and concurrently at the representative manufacturer-rated sound. It is expected that all equipment would operate during the daytime period, while the only battery storage cooling units and substation transformer would operate during the nighttime period. The sound energy was then summed to determine the equivalent continuous A-weighted downwind sound pressure level at a point of reception. Sound contour plots displaying broadband (dBA) sound levels presented as color-coded isopleths are provided in Figure 3 for daytime levels, and Figure 4 for the nighttime levels. The noise contours are graphical representations of the cumulative noise associated with full operation of the equipment and show how operational noise would be distributed over the surrounding area of the Project site. The contour lines shown are analogous to elevation contours on a topographic map, i.e., the noise contours are continuous lines of equal noise level around some source, or sources, of noise. Figure 3 and Figure 4 also show the ambient sound monitoring locations, representative of proximate noise sensitive land uses, that were used to assess potential noise impacts on a cumulative basis.

Table 12 and Table 13 show the projected exterior sound levels resulting from full, normal operation of the Project during daytime and nighttime, respectively, at the MLs and NSA-1. The tables also provide the total predicted net increase in sound energy at each of the three MLs and NSA-1, which are representative of proximate noise sensitive areas relative to the Project site.

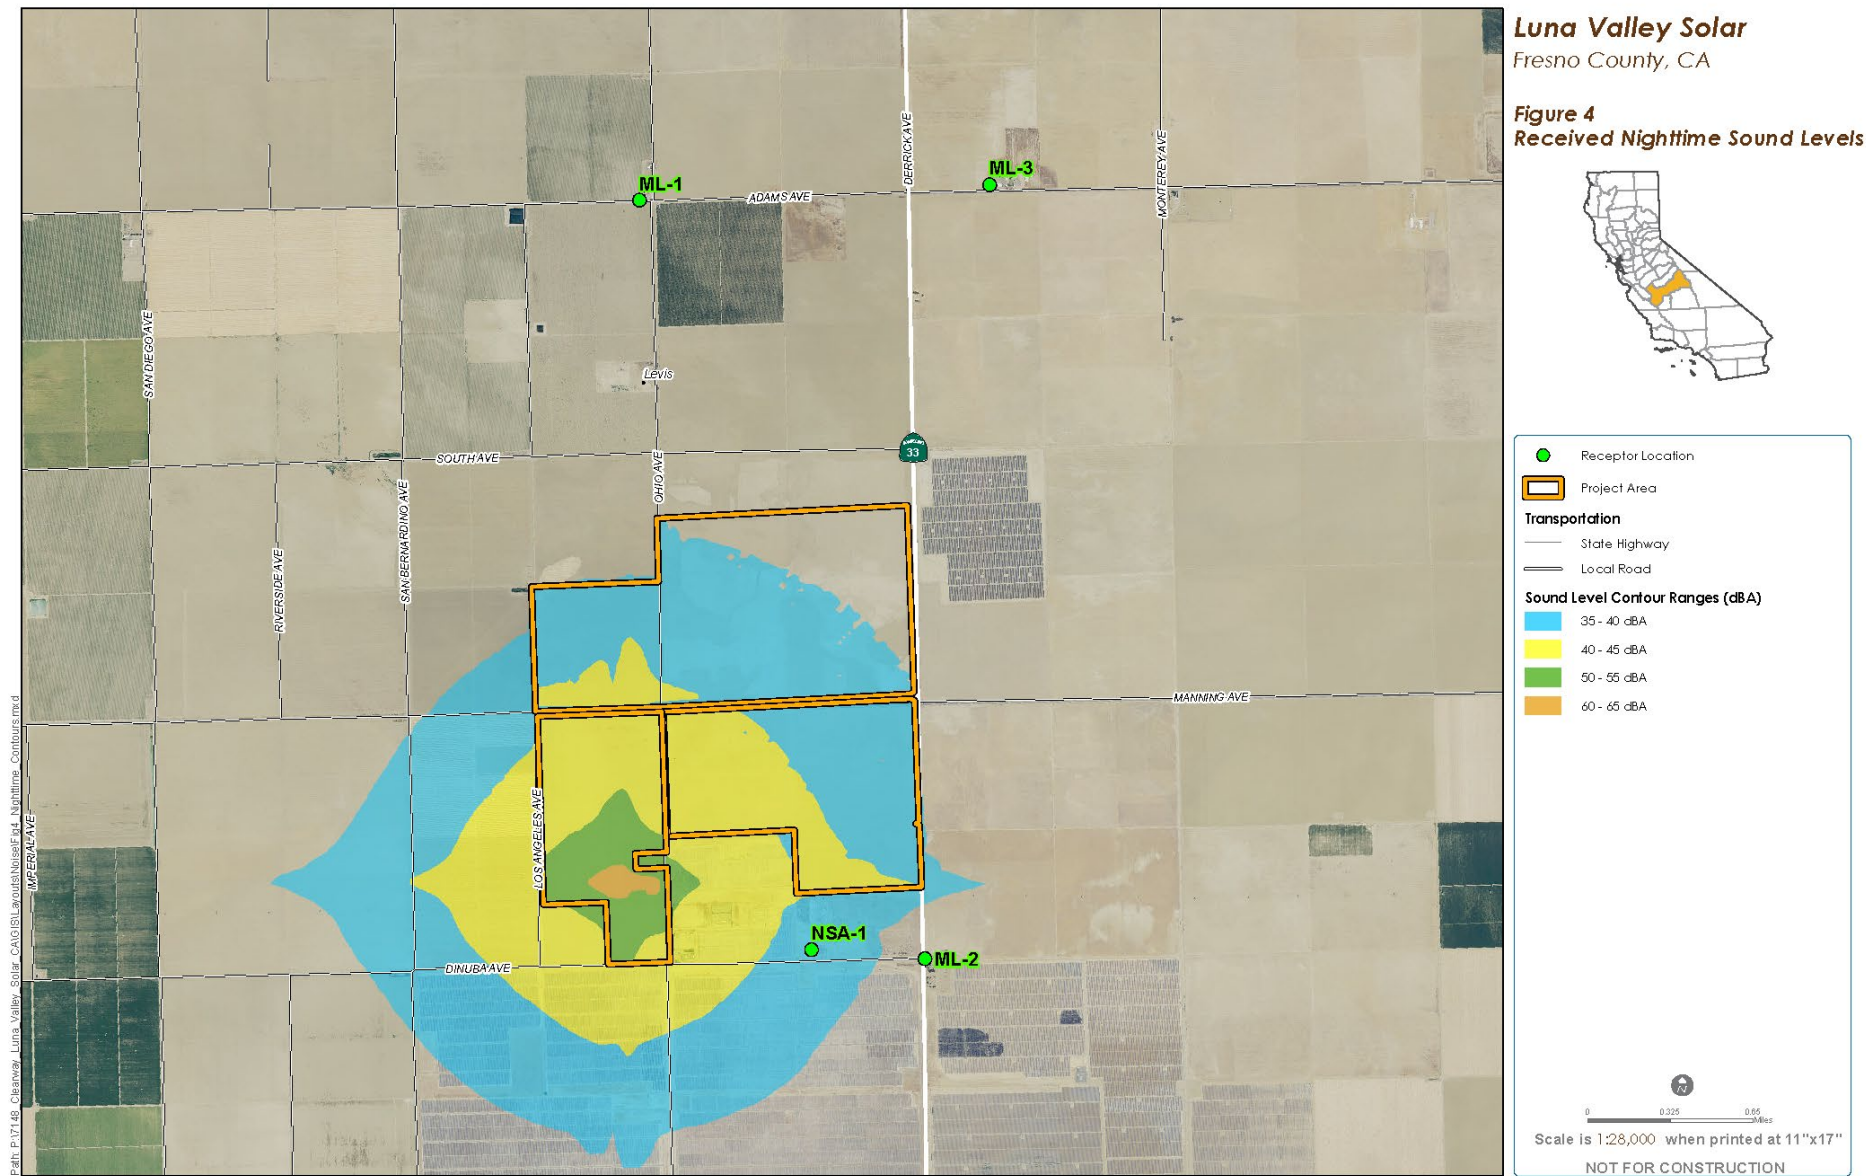

Table 12. Daytime Acoustic Modeling Results Summary

Monitoring Location	Daytime Ambient L _{eq} , dBA	Project Sound Level, dBA	Total Sound Level (Ambient + Project), dBA	Net Increase in Sound Level, dBA
ML-1	34	34	37	3
ML-2	34	40	41	7
ML-3	32	32	35	3
NSA-1	34	43	44	10

Table 13. Nighttime Acoustic Modeling Results Summary

Monitoring Location	Nighttime Ambient L _{eq} , dBA	Project Sound Level, dBA	Total Sound Level (Ambient + Project), dBA	Net Increase in Sound Level, dBA
ML-1	33	26	34	1
ML-2	33	34	37	4
ML-3	33	24	34	1
NSA-1	33	38	39	6

Table 12 and Table 13 show the highest total sound levels, inclusive of ambient and project operational levels, are associated with NSA-1, which would comply with the Fresno County Noise Control Ordinance daytime threshold limit of 50 dBA, as well as the nighttime threshold of 45 dBA.

4.4 TRANSMISSION LINE NOISE ANALYSIS

To interconnect the Project to the Pacific Gas and Electric (PG&E) Tranquillity Switching Station, PG&E would extend the footprint of the existing Tranquillity Switching Station north by approximately 100 feet and construct a new 230 kilovolt (kV) transmission line that would extend from the Tranquillity Switching Station to a structure located on the solar Project property. The PG&E transmission line would include approximately 1,300 feet of 230 kV conductor strung on approximately four tubular steel poles up to 140 feet in height. The PG&E transmission line would also include underground fiber optic line for communications. Energy from the Project solar arrays would be collected at the Project substation, described above, and transmitted to the PG&E-owned Tranquillity substation via PG&E transmission line, as shown on the submitted Site Plan. The nearest sensitive residential receptor would be approximately 0.5 miles away from the transmission line. The PG&E transmission line would be built by PG&E; however, the associated transmission line noise is included in this discussion of operation of the Project.

When a subtransmission line is in operation, an electric field is generated in the air surrounding the conductors, forming a corona. The corona results from the partial breakdown of the electrical insulating properties of the air surrounding the conductors. When the intensity of the electric field at the surface of the conductor exceeds the insulating strength of the surrounding air, a corona discharge occurs at the conductor surface, representing a small dissipation of heat and energy. Some of the energy may dissipate in the form of small local pressure changes that result in audible noise or in radio or television interference. Audible noise generated by corona discharge is characterized as a hissing or crackling sound that may be accompanied by a 120 Hz hum. Slight irregularities or water droplets on the conductor and/or insulator surface accentuate the electric field strength near the conductor surface, thereby making corona discharge and the associated audible noise more likely. Therefore, audible noise from subtransmission lines is generally a foul-weather phenomenon that results from wetting of the conductor.

However, during fair weather, insects and dust on the conductors can also serve as sources of corona discharge.

The Electric Power Research Institute has conducted several studies of corona effects (EPRI 1978, 1987). The typical noise levels for transmission lines with wet conductors are shown in Table 14.

Table 14. Transmission and Subtransmission Line Voltage and Audible Noise Levels

Line Voltage (kV)	Audible Noise Level Directly Below the Conductor (dBA)
138	34
240	40
360	51

As shown in Table 14, the audible noise associated with transmission and subtransmission lines decreases as the line voltage decreases; the audible noise associated with the 240-kV line is lower than 40 dBA. The noise levels from the Project's transmission lines at the nearest sensitive residential receptor located 0.5 miles away would be less than 30 dBA. This noise level would comply with the County's nighttime threshold of 45 dBA and would result in a less than 1 dB increase to the existing ambient noise level.

5.0 CONCLUSIONS

The construction of the Project has been organized into three broad work stages. Based on sound propagation calculations, construction sound levels are predicted to range from 48 to 66 dBA at the MLs and NSA-1. Periodically, sound levels may be higher or lower than those presented in Table 9; however, the overall sound levels should generally be lower due to excess attenuation and the trend toward quieter construction equipment in the intervening decades since these data were developed. As shown in Table 9, the highest projected sound level from construction-related activity is expected to occur at ML-2 and NSA-1 during activities associated with Stage 2, which would comply with the FTA threshold of 80 dBA. Furthermore, reasonable efforts would be made to minimize the impact of noise resulting from construction activities at proximate noise sensitive areas through the use of noise mitigation. Because of the temporary nature of the construction noise, no adverse or long-term effects are expected.

During Project construction, the worst-case vibration source would be pile driving. Based on vibration propagation calculations, construction vibration levels are predicted to range from 0.0001 PPV in/sec (31 VdB) to 0.0013 PPV in/sec (50 VdB) dBA at the MLs. These levels are based on the worst-case vibration producing equipment and it is expected that other vibration generating equipment proposed for the Project construction would result in lower vibration levels. Project construction would demonstrate vibration levels below the human perception threshold of approximately 65 VdB.

Normal Project operations would occur during the daytime period, while only the battery storage liquid cooling units, battery storage inverters, and substation transformer would operate during the nighttime period. The highest total sound levels, inclusive of ambient and project operational levels, are associated with NSA-1, which would be 44 dBA during the day and 39 dBA during the night. These levels show compliance with the Fresno County Noise Control Ordinance daytime threshold limit of 50 dBA, as well as the nighttime threshold of 45 dBA.

The Project substation would connect to a PG&E-constructed transmission line that would be constructed to connect the Project's output to the existing PG&E Tranquillity Switching Station. The audible noise associated with the 230-kV line is lower than 40 dBA. The noise levels from PG&E's transmission lines at

the nearest sensitive residential receptor located 0.5 miles away would be less than 30 dBA. This noise level would comply with the County's nighttime threshold of 45 dBA and would result in a less than 1 dB increase to the existing ambient noise level.

1.0 OVERVIEW

Luna Valley Solar I, LLC is proposing to develop, own, and operate the Luna Valley Solar Project (Project) in Fresno County, California. Tetra Tech Inc. performed a technical analysis of traffic impacts related to the Project on behalf of Luna Valley Solar I, LLC, using the *Guidelines for the Preparation of Traffic Impact Studies Within the County of Fresno* (Guidelines; Fresno County 2018). Additionally, standard analysis methodology developed by Transportation Research Board, in the Highway Capacity Manual (HCM) were used (TRB 2016).

In 2013, the State of California passed Senate Bill (SB) 743, which stated the most appropriate measure of transportation impacts is Vehicle Miles Traveled (VMT) as guided by the California Environmental Quality Act (CEQA). Jurisdictions had until July 1, 2020 to adopt and begin implementing VMT thresholds for traffic analysis. Prior to July 1, 2020, jurisdictions had the option to continue using LOS analysis or converting to VMT analysis once such thresholds were adopted. As detailed in this study, VMT for the Project is analyzed as required by the State CEQA Guidelines and additionally a LOS analyses is provided at the request of Fresno County and per the Guidelines referenced above. The Guidelines thresholds are based on the Fresno County's General Plan *Transportation and Circulation Element* (Fresno County 2000).

This Traffic Impact Study (TIS) will focus on;

- Existing traffic volumes and current local infrastructure conditions/characteristics.
- Projected future traffic conditions without the presence of the Project.
- Peak construction impacts during the month(s) of construction that will have the largest number of workers and deliveries as well as implications for the remaining construction process.
- The operational impacts of the Project will be considered using the 20-year horizon traffic projections.
- A discussion of the results and implications of the estimated Project traffic on the existing transportation system.
- A discussion of the Project's VMT impacts as required by the State CEQA Guidelines.

The purpose of this TIS is to qualify and quantify impacts of construction and operations traffic to the local transportation infrastructure and to provide Fresno County with the information necessary for approval of the Project and to satisfy requirements within the Guidelines and CEQA.

In accordance with Appendix G of the State CEQA Guidelines, a proposed project would have a significant transportation impact if the project would:

1. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities;
2. Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b);
3. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or
4. Result in inadequate emergency access.

2.0 PROJECT DESCRIPTION

The Project is in Fresno County, California, 9 miles west-southwest of the city of Tranquillity within the unincorporated area of Levis (Figure 1). The Project consists of constructing and operating a photovoltaic (PV) solar electricity generating facility and energy storage system with associated infrastructure that would produce up to 200 megawatts of alternating current energy at the point of electrical grid interconnection. The Project will be situated on approximately 1,300 acres of privately-owned agricultural land (Figure 2) in western Fresno County. The Project would include the construction of solar arrays, an electrical substation and electrical interconnection facilities, an energy storage system and other necessary infrastructure including an operation and maintenance building, septic system and leach field, a supervisory control and data acquisition system, a meteorological data system, buried conduit for electrical wires, overhead collector lines, on-site access roads and security fencing.

2.1 PROJECT LOCATION

The Project site is in unincorporated Fresno County and generally bound by flat, agricultural lands and other solar energy generation facilities. The nearest town is Tranquillity, a census-designated place, located approximately 9 miles to the east-northeast. The city of Fresno (Fresno) is located about 40 miles to the northeast of the site. Interstate 5, paralleled to the east by the California Aqueduct, is approximately 11 miles to the west as well as to the south of the Project area. The cities of Mendota and San Joaquin are approximately 10 miles north and east of the Project area, respectively. The San Joaquin Airport is roughly 9.5 miles east of the Project area.

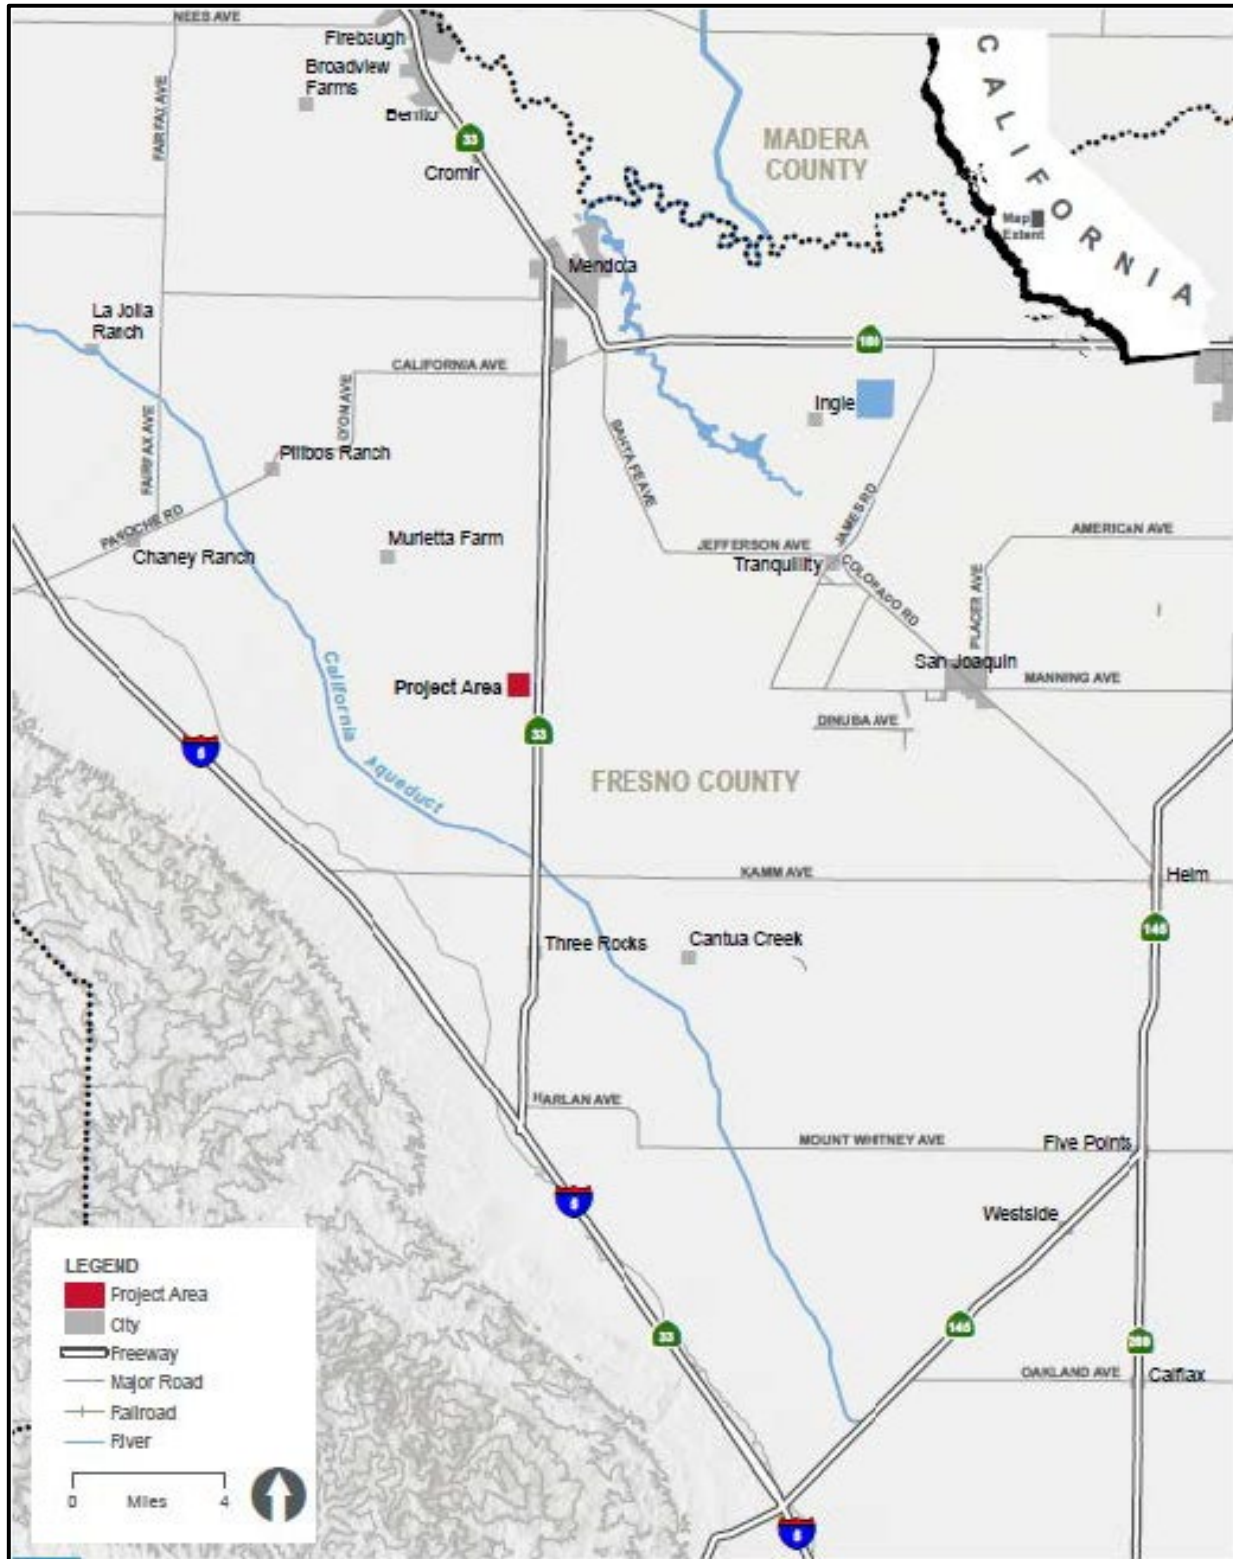

More specifically, S. Derrick Avenue defines the eastern boundary of the Project area. The western edge of the Project area is approximately 2,600 feet (ft.) east of S. Bernardino Avenue, the northern edge is approximately 1,400 ft. south of W. South Avenue, and the southern edge is approximately 1,300 ft. north of W. Dinuba Avenue. W. Manning Avenue cuts through the approximate middle of the Project area from east to west and S. Ohio Avenue cuts through the approximate middle of the Project area from north to south.

The Project site is entirely within the U.S. Geological Survey 7.5-minute topographic quadrangle of Levis. The Project area is located within Township 15 South, Range 14 East, Sections 23, 24, 25, and 26. The Project site is located approximately within the latitudes of 36.59° and 36.61° and within the longitudes of -120.39° and -120.42° (in decimal degrees). The Project area centroid is located at approximately latitude/longitude 36°36'12"N/120°24'05"W.

The Project site is located in an area zoned AE – 20, Exclusive Agriculture; 20-acre minimum parcel size. Within this zoning district, Fresno County permits utility-scale solar energy uses with an Unclassified Conditional-Use Permit.

For the purposes of the TIS, an Area of Interest or Project area is not a finite bounded area, but rather simply all major intersections, and roadways relevant to Project construction and operations. The Area of Interest is as follows:

- Intersection of W. Manning Avenue and S. Derrick Avenue
- Intersection of S. Derrick Avenue and Panoche Road
- Intersection of S. San Benito Avenue and Panoche Road
- Intersection of W. Whitesbridge Avenue and Panoche Road
- Interstate 5 interchange at W. Manning Avenue (delivery route only)
- Interstate 5 interchange at S. Derrick Avenue (delivery route only)
- S. Derrick Avenue
- W. Manning Avenue

**PROJECT LOCATION
FIGURE 1**

**PROJECT SITE
FIGURE 2**

2.2 PROJECT SCHEDULE

The Project is scheduled to go through the permitting process and the California Environmental Quality Act (CEQA) review through summer 2021. Construction is anticipated to begin in 2022 and the facility would begin operations in 2023.

More specifically, site civil work will occur for approximately 2 months, at which point high voltage, battery storage, and PV system work will all occur simultaneously for approximately 10 months, and completions, testing and commissioning will take 4 to 6 months following that. The peak month of construction is anticipated to be the 7th month from the start of construction.

2.3 METHODOLOGY

This study was designed to evaluate potential impacts associated with routing Project traffic to and from the Project via the major local intersections on the haul route. This was accomplished by multiple evaluation metrics including evaluating the potential change to the Level of Service (LOS) rating of the roadway and intersections, evaluating the additional Vehicle Miles Traveled (VMT) caused by construction and operations, and performing a Traffic Index (TI) analysis to quantify changes in the TI value which is an aspect of the road pavement design.

2.3.1 Level of Service

LOS is a qualitative measure used to relate the quality of motor vehicle traffic service based on the delay a driver is likely to experience when using the intersection or roadway. The LOS performance measure is analyzed for a representative worst-case time frame, or the most severe period of time for impacts that are likely to occur. This means impacts are analyzed for Peak Hour Traffic (PHT) which is most commonly “rush hour” traffic. This forms the basis for how infrastructure currently performs. Project PHT from the peak month or week of construction (the period of construction with the largest number of workers) is added to the existing PHT to show the most severe delays that motorists might experience during the construction process.

The LOS performance measure for an intersection is based on the average delay that a vehicle will experience after approaching the intersection. Unsignalized intersections include driveway accesses, two-way and four-way stop-controlled intersections, and roundabouts. The LOS analysis provides a standardized means of describing transportation facility operation by assigning a letter grade to it. As shown in Table 1, LOS ranges from A to F with LOS A representing the best conditions (free flow) and LOS F representing the worst conditions (most congested). The analyses are based on the HCM guidelines for determining LOS (TRB 2016). The delay must be analyzed for each movement of the intersection independently. If several movements share a lane, the capacities are calculated separately then combined into a shared movement capacity that is used in the delay equation in place of movement capacity.

Table 1. LOS Definitions

LOS	Unsignalized Intersection Delay (seconds)	Highway (PCPMPL)
A	0-10	0-11
B	10-15	11-18
C	16-25	18-26
D	26-35	26-35
E	36-50	35-45
F	>50	>45

PCPMPL - passenger car per mile per lane

Intersections are separated into turning movements to analyze them. There are many variables that impact intersection function and how humans behave within them, including geometry, presence of pedestrians and bikes, lane width, grade, theoretical maximum movement counts if no traffic is present at any other movement/lane group, and conflicting traffic demand volume. Geometry is the physical layout of the intersection such as “T” or “4 leg” intersection and the number of lanes for each direction. Pedestrian and bike crossings can impede traffic, so hourly estimates for this volume can also be important. Lane width affects a driver’s comfort and ultimately how quickly they can negotiate the movement, as can the length of time it takes a pedestrian to cross. The theoretical maximum capacities, also known as saturation flow rate, taken from the HCM are 1,800 passenger car equivalent (PCE) vehicles per day for a free-flowing lane (TRB 2016). Heavy vehicles such as buses and semi-trucks are converted to PCE with a heavy vehicle factor as defined by the HCM. Tables 5, 6, 7 include PCE use a factor of 3.0, however this value is representative and varies depending on the type of LOS Calculation (signalized intersection, stop controlled intersection, or highway). The HCS7 software does this adjustment automatically with the inputs being total unadjusted number of vehicles and percent of heavy vehicles. Finally, conflicting volume is the number of cars that impede a motorist from completing a movement, e.g., right turns that need to merge with conflicting cross traffic.

Freeway and highway LOS are based on the density of traffic using the road in units of passenger cars per mile per lane. Roadway LOS analysis is only performed on highways and freeways. For analysis, a freeway is a road where all vehicles enter and exit via ramps and the intersections are not at grade and a highway is a road that is uncontrolled at the intersections, but the intersections are at grade. All other road types encounter control measures at intersections and the flow of traffic is dictated by the intersection rather than characteristics of the road. The HCM does not have methods for analyzing LOS at minor roads between intersections.

2.3.2 Vehicle Miles Traveled

The VMT metric is project-based and is implemented to help quantify traffic induced by construction and operations. The VMT metric is used to align effects on traffic with greenhouse gas (GHG) emissions. VMT is presented as a time dependent value; the number of additional VMT per week during construction and operations, as well as a total VMT value for the entire Project. The California Natural Resources Agency adopted changes to the CEQA identifying VMT as “the most appropriate metric to evaluate a project’s transportation impacts... Thus, to achieve the State’s long-term climate goals, California needs to reduce per capita VMT.” The VMT values calculated should be compared to a jurisdictionally determined threshold of significance which ultimately dictates whether a project’s traffic impacts are significant and require mitigation or are a less than significant impact.

Fresno County has not yet developed a threshold of significance for VMT, so in lieu of that the criteria as stated in the Technical Advisory on Evaluating Transportation Impacts in CEQA (CEQA 2018) will apply;

“The VMT metric can support the three statutory goals: “the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses.” (Pub. Resources Code, § 21099, subd. (b)(1), emphasis added.) However, in order for it to promote and support all three, lead agencies should select a significance threshold that aligns with state law on all three. State law concerning the development of multimodal transportation networks and diversity of land uses requires planning for and prioritizing increases in complete streets and infill development but does not mandate a particular depth of implementation that could translate into a particular threshold of significance. Meanwhile, the State has clear quantitative targets for GHG emissions reduction set forth in law and based on scientific consensus, and the depth of VMT reduction needed to achieve those targets has been quantified. Tying VMT thresholds to GHG reduction also supports the two other statutory goals. Therefore, to

ensure adequate analysis of transportation impacts, OPR recommends using quantitative VMT thresholds linked to GHG reduction targets when methods exist to do so.”

2.3.3 Traffic Index

The TI performance metric comes from the Caltrans Highway Design Manual (Caltrans 2017). Per the Guidelines, pavement impacts are analyzed based on a comparison of the TI with the project to the TI without the project. A 20-year TI shall be used unless special circumstances dictate otherwise. On the roadways requiring a TI analysis the established threshold of significance for Fresno County is a project that causes an increase in the TI of 0.5 or more. Communication with Fresno County indicated that “construction impacts to the TI must be averaged over the length of the construction period – not the remaining lifetime of the existing pavement.” The 0.5 threshold of significance is still utilized despite the TI impacts being exaggerated by averaging over 16 months rather than 20 years.

To determine if the TI increases, traffic data was used to determine the approximate Equivalent Single Axle Load (ESAL) without the Project to compare to the ESAL with the Project traffic added. Then using the methods from the Caltrans Highway Design Manual Section 613.3, the value will be converted to a TI value for the required design life. If the design life is known then it should be used, however, at the request of Fresno County the construction duration of 16 months will be used.

3.0 EXISTING TRAFFIC CONDITIONS

3.1 EXISTING TRAFFIC INFRASTRUCTURE

3.1.1 Roads

South Derrick Avenue – S. Derrick Avenue in the vicinity of the Project is a two-lane undivided highway that provides connectivity from Interstate 5 to Mendota. It is part of the larger California State Route 33. Generally, there are dedicated turn lanes at nearby intersections. There is approximately 2 feet of paved and 5 feet of unpaved shoulder on either side of the road. Based on review of satellite imagery from 2018, it appears routine maintenance and repair has occurred on the South Derrick Avenue. There is a significant number of cracks visible that have been sealed, however, the crack seal is a temporary fix and is indicative of the pavement nearing the end of its design life.

West Manning Avenue – W. Manning Avenue in the vicinity of the Project is a two-lane undivided major roadway that provides connectivity from about 2.5 miles west of Interstate 5 all the way to the Town of Reedley approximately 50 miles east of the Project location. It has shoulders approximately the same width as those found on S. Derrick Avenue, and the road conditions appears to be much better than that of S. Derrick Avenue. There are no dedicated turn lanes onto or off W. Manning Avenue anywhere near the Project.

3.1.2 Intersections

S. Derrick Avenue and W. Manning Avenue – This intersection is approximately 10 miles south of Mendota, 4.5 miles north of the California Aqueduct crossing, and 11.6 miles north of Interstate 5. This intersection is the closest major intersection to the Project which is northwest of the intersection. Most Project vehicles will go through this intersection to get to the Project access point west of the intersection on Manning Road. There are dedicated left turn lanes off S. Derrick Avenue as well as large radii flares for right turns though it is not striped as a dedicated lane. West Manning Avenue has no dedicated turn lanes and much smaller right turn flare at the intersection.

S. Derrick Avenue and Panoche Road – This intersection is approximately 2 miles south of Mendota. The cross street is W. California Avenue on the west side of the intersection and Panoche Road on the east side. Panoche Road becomes W. Whitesbridge Avenue approximately 1.6 miles east of the intersection which is the primary thruway to Fresno. Most of the workers are likely to either live or stay in Fresno and travel through this intersection to the facility. The intersection itself is a two-way stop-controlled intersection with S. Derrick Avenue being the major (unstopped) legs of the intersection. There is added shoulder space for acceleration and deceleration on and off of S. Derrick Avenue in both directions, however; actual acceleration and deceleration lanes are not demarcated.

S. San Benito Avenue and Panoche Road – This intersection is part of an essentially triangular interchange consisting of three intersections. California Route 180 changes from W. Whitesbridge Avenue to N. San Benito Avenue at this interchange and is continuous without stopping. It curves from the east to head north into Mendota. Due to it being a continuous route, the west and south legs cross before connecting to the curved section of Route 180 which forms this intersection. Each leg then continues and connects to Route 180. It is a two-way stop-controlled intersection with the stop signs on the north-south direction which is S. San Benito Avenue.

W. Whitesbridge Avenue and Panoche Road – This intersection is part of the triangular interchange described above and is the only other intersection that will be utilized by Project traffic.

Interstate 5 interchange at W. Manning Avenue (delivery route only) – This is approximately 10.5 miles west of the Project location and is not expected to be used by Project construction workers, but some of

the deliveries will take this route. It is a grade separated interchange and the Project is expected to have negligible impact to this intersection with respect to LOS and TI.

Interstate 5 interchange at S. Derrick Avenue (delivery route only) – This interchange is approximately 11.6 miles south of the Project site. As a grade separated interchange, traffic impacts are less quantifiable, and typically negligible at these locations.

3.2 EXISTING TRAFFIC VOLUMES

Due to the ongoing SARS-CoV-2 or COVID-19 pandemic, collection of new traffic data was not recommended. Data collected must be as representative of normal conditions as possible, and due to travel restrictions, unemployment, and remote working during the COVID-19 pandemic, traffic in many areas is unusual and will be unrepresentative of normal traffic conditions for an unknown period of time. Additionally, traffic data in the area was available from two previous studies and since the area is rural and has slow population growth, the traffic volumes for the area are not likely to have changed significantly in the time since those studies were performed. Lastly, the Project is located in a rural area where traffic volumes are typically low, far under roadway capacity, and fluctuate by a greater degree day to day than urban traffic; therefore, new data will not change the results in a meaningful manner.

The data that was available is summarized in Table 2 below. The data came from the *Traffic Technical Report for the Little Bear Solar Project* dated June 2017, and updated August 2018 (VRPA 2018), from Section 4.18 Transportation and Traffic of the *Tranquillity Solar Generating Facility Project Draft Environmental Impact Report* dated May 2014 (ESA 2014), from data collected in 2018 and shown in the *Traffic Impact Study for the Proposed Recurrent Energy Scarlet Solar Project* (Peters Engineering Group 2020), and from Caltrans data. The ESA 2014 data was inconsistent with other available data, and was older than data the County Guidelines recommend for use, such that it was considered an outlier value. The data was adjusted using U.S. Census data for population growth to approximate traffic conditions as they will be during the start of construction (Table 3) and how they will be in the 20-year horizon (Table 4). Additionally, given the uncertainty in the data the PHT volume is estimated to be the same in the morning and evening just in the opposite direction. What little data is available suggests that the morning peak hour is significantly lower in volume than the PM peak. The volume used in this study is based on the PM peak hour values (VRPA 2018).

Table 2. Available Traffic Data

Source/Date	Road	Peak Hour	Average Daily Traffic
ESA, 2014	S. Derrick Avenue / CR-33	310	2,200
VRPA Collected 2016	S. Derrick Avenue / CR-33	232	2,300
VRPA Collected 2016	Panoche Road	81	900
VRPA Collected 2016	W. California Avenue	174	1,700
Rincon Collected 2018	W. Manning Avenue	90*	702
Rincon Collected 2018	S. Derrick Avenue / CR-33	221*	2,200
Rincon Collected 2018	W. Whitesbridge Avenue @ James	529*	X
Caltrans 2018	S. Derrick Avenue / CR-33(Near Interstate 5)	X	1,950
Caltrans 2018	W. Whitesbridge Avenue West of Panoche Road	730	7,300
Caltrans 2018	W. Whitesbridge Avenue East of Panoche Road	730	7,400

Note: Neither traffic study contained exclusive data for W. Manning Avenue

* Collected as turning movement counts at morning and evening peak hour over two days. Average of the two highest peak hours shown.

The U.S. Census Bureau shows an estimated population growth of approximately 7.40 percent over nine years or approximately 0.82 percent for Fresno County and 6.90 percent over nine years or 0.77 percent for the City of Fresno. This means Fresno County growth rate outside of the city is skewed down by the City's lower growth rate. The City represents 53 percent or approximately half of the population of Fresno County based on the census data so growth rate for the rest of Fresno County excluding the City of Fresno is approximately 0.87 percent. However, the 2014, 2016, and 2018 data for S. Derrick Avenue show no significant change in average traffic during that four-year time frame. This lack of change implies that while the growth is outside of the City of Fresno, it is likely concentrated within towns and communities and has little effect on the traffic in more remote and rural locations where most of the Project construction traffic will occur. In order to be conservative and account for some uncertainty in data, the growth rate is used to determine the values in Table 3 and Table 4, and the counts reflect growth between the most recent data in 2018 and the projected Project start date of 2022.

Table 3. Background Traffic During Construction (2022)

Road	Peak Hour	Average Daily Traffic
S. Derrick Avenue / CR-33	234	2,278
Panoche Road	84	948
W. California Avenue	183	1,791
W. Manning Avenue	104	727

3.3 FUTURE TRAFFIC PROJECTION WITHOUT PROJECT

The average population growth rate is a reasonable prediction of the average growth of traffic for a given period of time. The calculations for traffic growth are included in Appendix A.

Table 4. Background Traffic During Operations (2040)

Road	Peak Hour	Average Daily Traffic
S. Derrick Avenue / CR-33	273	2,662
Panoche Road	98	1108
W. California Avenue	214	2,093
W. Manning Avenue	121	849

4.0 TRIP GENERATION

Trip generation data for a PV solar facility is not available in the *Institute of Transportation Engineers Trip Generation Manual*; however, detailed traffic volumes are known for the Project site from planning and scheduling of the construction activities as well as the applicant’s experience with construction and operation of similar solar facilities. The detailed data is included in Appendix A - Traffic Data. See Trip Generation Table 5 and Figure 3 for Project Trip Generation. The values shown are conservative and may be higher than actual daily traffic. It is anticipated, given the distance between the City of Fresno and the Project site, that workers will carpool. An estimated 25 percent of workers carpooling was used for the analysis and is shown in the values in Table 5. This value is in line with previous project experience as well as recent traffic impact studies conducted for solar facilities in the area.

Peak hours for the Project are expected to be between 7:00 and 8:00 AM and 5:00 and 6:00 PM when construction workers will commute to the site. It is expected that nearly all workers would arrive/and leave during the peak hours. Conservatively, a small number of workers are included as either leaving during the morning peak hour or arriving during the evening peak hour.

Once constructed, the Project would operate seven days per week and 365 days per year. The expected facility maintenance would generate little traffic during operations. Only occasional, onsite maintenance is expected to be required following commissioning. Initially, personnel would likely visit the Project area daily or weekly, but it is anticipated that eventually maintenance visits would be reduced to once a month or less. Operations and maintenance activities would require up to 4 workers performing visual inspections, monitoring plant performance, executing minor repairs, and responding to needs for plant adjustment. On intermittent occasions, the presence of 5 to 30 workers may be required for repairs or replacement of equipment, panel cleaning, and other specialized maintenance. However, due to the self-operating nature of the facilities, such actions would occur infrequently. Therefore, there will be no impact to peak hour traffic associated with ongoing operations of the Project.

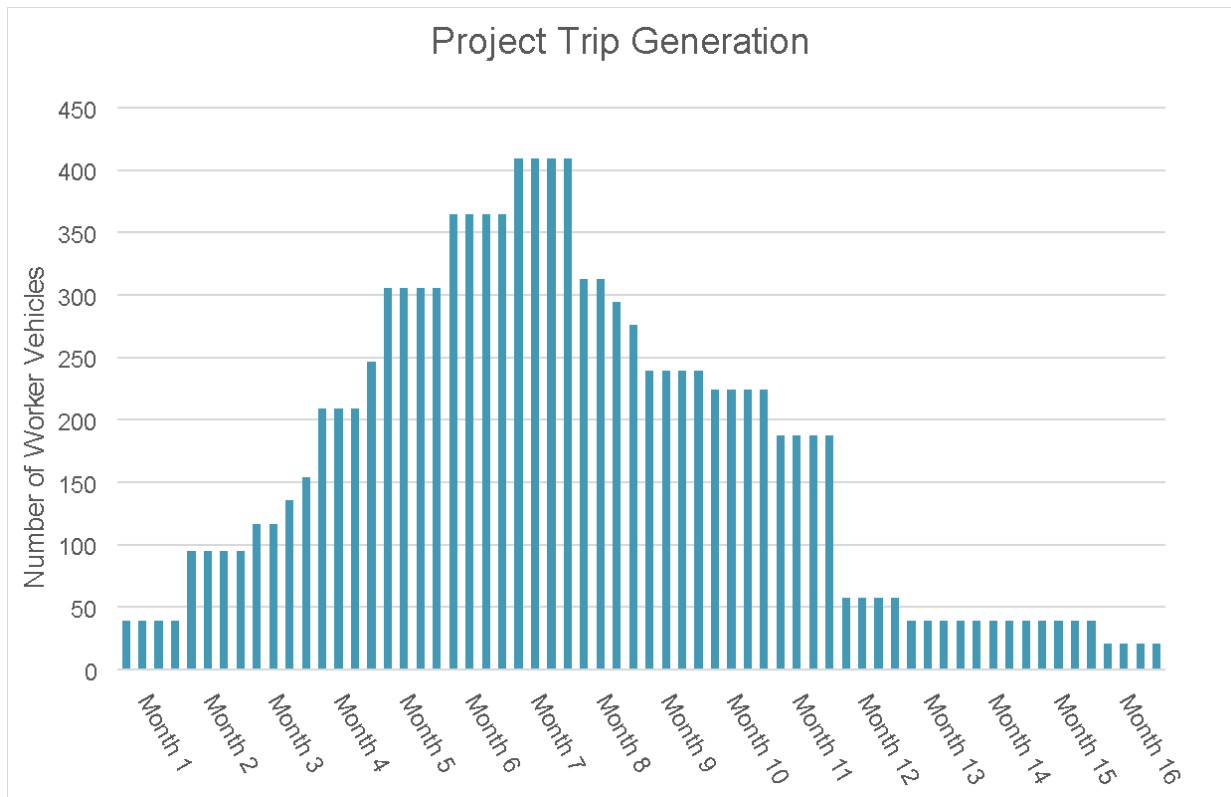

Table 5. Trip Generation

Phase	Daily			Trip Generation				PCE Trip Generation			
				AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
	Workers	Trucks	ADT (PCE)	in	out	in	out	in	out	in	out
Average Construction Traffic	229	5	187	172	10	10	172	172	12	12	172
Peak Construction Traffic	553	10	445	415	18	18	415	418	15	15	418
Operations	0*	0*	0*	0*	0*	0*	0*	0*	0*	0*	0*
20-year horizon operations	0*	0*	0*	0*	0*	0*	0*	0*	0*	0*	0*

* Operations short and long term are expected approximately twice a year resulting in no trips to the site on an average day.

ADT – average daily traffic – this is the number of vehicles per day that will arrive at the site and corresponds directly to Table 6 and 7. The total number of trips including trips outside of peak hours is analyzed for the VMT analysis in Table 9 and Appendix B;

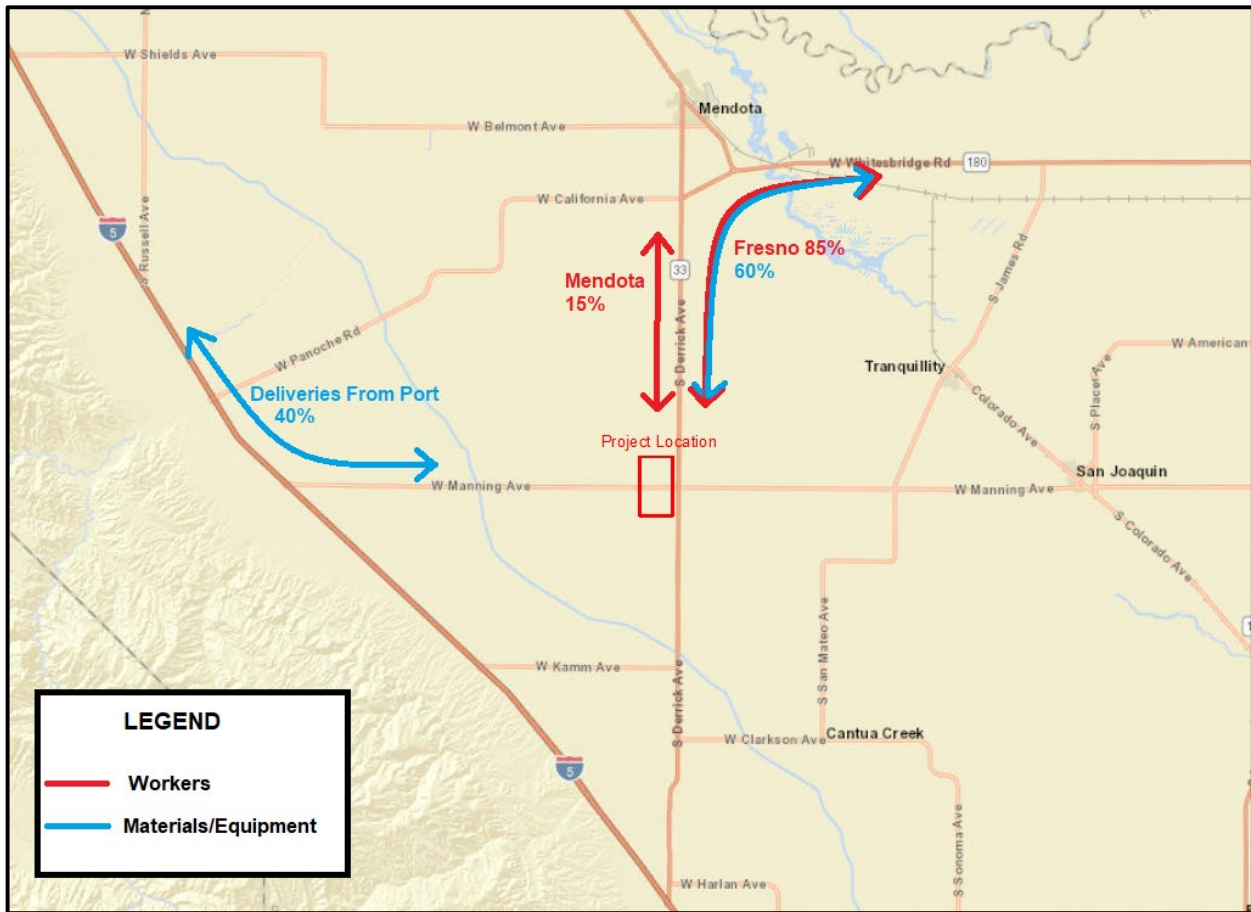

PCE – passenger car equivalents as described in Section 2.3.1. A PCE value of 3.0 was used in calculations.

**PROJECT TRIP GENERATION
FIGURE 3**

4.1 TRIP DISTRIBUTION

The Project traffic distribution is a reasonable estimate based on: panel and racking manufacturer, proximity to cities, commonality of the remaining materials like fencing and concrete, etc. Based on these considerations it is expected that the panels, inverters, and racking will arrive by ship to the Port of Oakland which is 152 miles from the Project location. These will be delivered with standard 5-axle semi-trucks by way of Interstate 5 to Mendota and are approximately 40 percent of the total materials and equipment truck loads to the Project. The remaining 60 percent of heavy vehicle loads will come from Fresno; either being sourced locally or arriving at one of the two local railyards. This includes construction equipment, aggregate, concrete, fencing, cabling and electrical equipment, etc. An estimated 85 percent of the workers will reside or lodge in the City of Fresno. Due to limited lodging available in Mendota, only approximately 15 percent of the workers are likely to reside or lodge there. The trip distribution is shown below in Figure 4 and in Tables 6 and 7.

PROJECT TRIP DISTRIBUTION

4.2 TURNING MOVEMENT COUNT

TURNING MOVEMENT COUNTS EXISTING CONDITIONS
FIGURE 5

TURNING MOVEMENT COUNTS DURING CONSTRUCTION
FIGURE 6

5.0 PROJECT IMPACTS

5.1 LEVEL OF SERVICE

Per the Guidelines, the County of Fresno road network serves as a system of routes for the safe and efficient movement of goods and people. The County has a responsibility to effectively manage and maintain the system within its boundary in order to preserve the safety, functional integrity, and public purpose. The goal of a TIS is to assess potential impacts to traffic caused by proposed development adjacent to or within the system and to identify any infrastructure improvements or mitigation measures needed to ensure that the road network will operate acceptably and safely upon completion of the proposed development.

The Guidelines (Fresno County 2018) include the following thresholds for LOS:

Acceptable Levels Of Service

LOS A, B, and C. LOS D is considered acceptable on urban roadways within the sphere of influence of the Cities of Fresno and Clovis. LOS C is the lowest acceptable LOS on all other roadways in the County.

Unacceptable Levels Of Service

LOS D, E and F, except on urban roadways within the sphere of influence of the City of Fresno and City of Clovis where only LOS D is acceptable.

These thresholds implement Fresno County’s General Plan *Transportation and Circulation Element Policy* TR-A.2, which states, “The County shall plan and design its roadway system in a manner that strives to meet Level of Service (LOS) D on urban roadways within the spheres of influence of the cities of Fresno and Clovis and LOS C on all other roadways in the county,” (Fresno County 2000).

Table 8 summarizes the LOS results associated with the construction of the Project. These impacts are temporary with an overall construction duration of 16 months and impacts concentrated during only two of those months. The analysis methodologies used for analyzing traffic capacity and LOS are based on the latest edition of the *Highway Capacity Manual (HCM)*, Transportation Research Board, National Research Council.

Table 8. Level of Service Results

	Existing Condition				Construction Condition			
	AM		PM		AM		PM	
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
S. Derrick Avenue and Panoche Road	11.1	B	11.4	B	28.2	D	18.4	C
S. Derrick Avenue and W. Manning Avenue	10.4	B	10.8	B	15.0	B	31.7	D
S. San Benito Avenue and Panoche Road	9.5	A	9.6	A	12.8	B	13.1	B
W. Whitesbridge Avenue and Panoche Road	10.7	B	10.6	B	10.8	B	18.8	C
S. Derrick Avenue	1.7*	A	1.7*	A	10.1*	A	10.1*	A

* The delay column for S. Derrick Avenue is the density in passenger car per mile per lane as that is a road segment.

As shown in Table 5, an average day during construction of the Project includes less than half of the construction vehicles of the peak construction day and will thus result in a much better LOS. Outside of the two peak months, the LOS is not failing at either intersection but is still lower than the goal for six of the remaining 16 months (Months 4 through 11 in Figure 3).

No mass transit, bike routes, or sidewalks exist currently in the area. Due to the rural nature of the area, calculations assumed that pedestrians are not present at these intersections, thus there would be no impacts to pedestrian LOS and safety.

5.1.1 Operations

Once operational, the Project is nearly self-sufficient and will require only two to four full time employees. A day with significant maintenance operations would entail less than 20 workers commuting to the site. Twenty vehicles are within typical daily traffic fluctuations for a rural road and is low enough to be an unquantifiable impact to traffic operations.

5.1.2 20-Year Horizon

Operation traffic volumes for the entire operating life cycle of the Project are not expected to change. It is expected that there will be minimal site presence on a typical day with only occasional maintenance operations. Traffic in the area will likely grow slightly as development occurs over time in the vicinity of the Project. The Project is not expected to have a significant impact to future traffic LOS.

5.2 VEHICLE MILES TRAVELED

The VMT analysis aims to quantify the total number of vehicle miles added to the roads as a direct result of the construction and operations of the Project. The analysis looked at the estimated number of workers on a weekly basis, reduced it by the number that are likely to carpool and multiplied by the approximate distance traveled and the number of times per week that distance is traversed (i.e., commutes happen 10 times per week = 2 times per day). The distances were estimated as follows:

- The distance to the City of Fresno is estimated conservatively to be 45 miles. The Union Pacific rail yard is 44.7 miles from the Project, the Burlington Northern Santa Fe rail yard is 44.2 miles from the Project, and the approximate center of the City of Fresno is 43.7 miles from the Project site. The 45-mile distance represents a value that accounts for the likelihood that workers will be lodging at various locations throughout the City of Fresno. The distance to the City of Fresno is also used for an estimated 2 percent of workers making trips for miscellaneous reasons once a week.
- The distance to Mendota is approximately 11 miles to 12 miles, and 12 miles also encompasses the distance to both San Joaquin and Tranquillity, making it a useful approximation for both the commute and the occasional lunch trip. It was estimated that an average of 4 percent of workers would go offsite for lunch on a given day.
- The distance from the Port of Oakland to the Project location is 152 miles. This is assumed to be the route for all deliveries arriving by ship, including deliveries for the panels, racking system, and inverters. The approximate number of deliveries is provided by week and totals 1,620 deliveries for all equipment and materials. The calculation conservatively assumes that all the trucks return to their origin upon completing each delivery, resulting in 2 trips per truck delivery.
- The deliveries of common materials and equipment are assumed to either be available in the City of Fresno, available by way of the rail yard in Fresno, or available elsewhere within Fresno County and within the 45-mile distance of the Project (such as for a concrete batch plant or aggregate location).

Table 9 provides the results of the VMT analysis. The significance of the total VMT and impact implications are discussed in Section 6.1.2 Vehicle Miles Traveled. The full analysis with week by week VMT is shown in Appendix B - Calculations.

Table 9. Construction Vehicle Miles Traveled

Source Location	Distance	Occurrences per week	Totals
Worker Commute from/to Fresno	45	10	4,200,479
Worker Commute from/to Mendota	12	10	1,120,135
Worker Lunch Trip	12	10	70,304
Worker Ulterior Trip	45	2	26,403
Panel/Racking/Inverter Deliveries from Oakland Port	152	2	290,628
Materials Deliveries from Fresno	45	2	44,777
Equipment Deliveries from Fresno	45	2	15,167
Total Passenger Vehicle VMT			5,417,320
Total Heavy Vehicle VMT			350,572
Grand Total Construction VMT			5,767,892

5.2.1 Operations and 20-Year Horizon

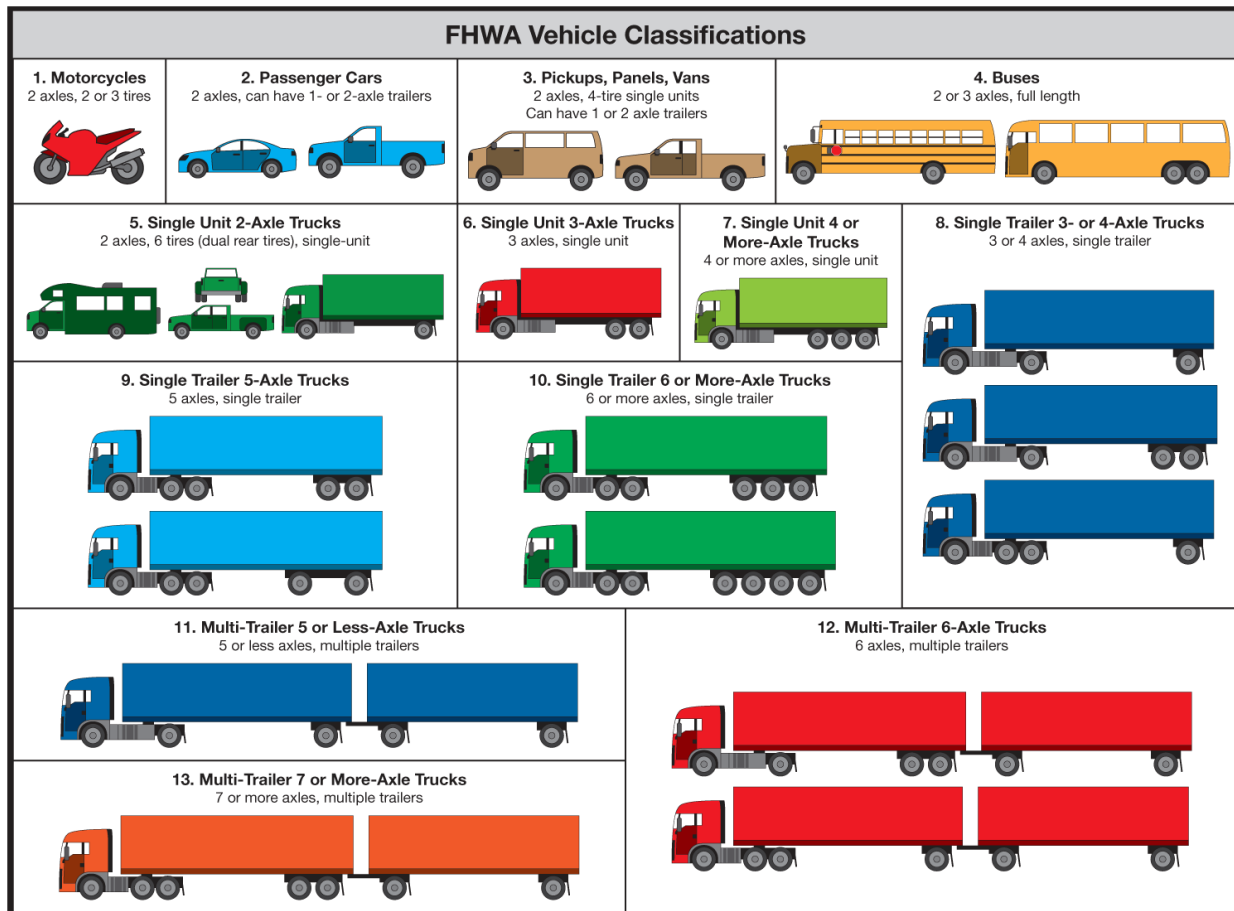

Operational VMT is considerably smaller than the construction VMT. As mentioned previously, a typical day would not have any workers visiting the site. A conservative estimate of the VMT for operations would assume 4 workers from the City of Fresno every other week. This is a maximum of 9,360 VMT per year during operations. This will be typical throughout the operational life of the facility. There will likely be occasional larger repair operations, but these will be infrequent and of short duration. Due to the duration of the repairs, these occurrences would add so few VMT that it is not a meaningful inclusion in the analysis. Over a 20-year period the total VMT for construction and operations is approximately 5,955,092 miles.

5.3 TRAFFIC INDEX

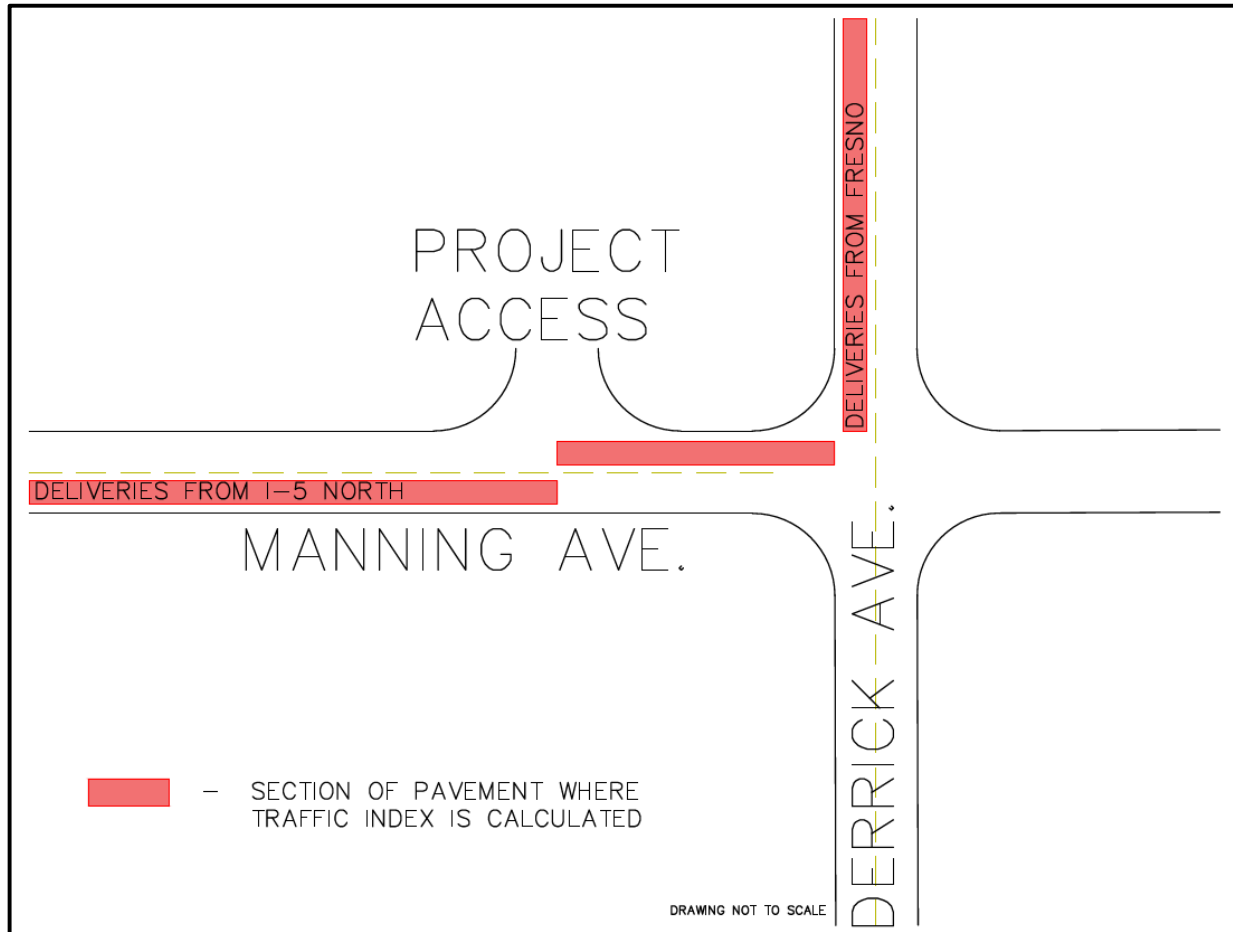

Traffic Index was analyzed using the same assumptions for delivery quantities and origins as described in Section 5.2 - Vehicle Miles Traveled. Based on those assumptions, heavy vehicles will arrive at the site from two directions, thus the TI was analyzed for both directions. The TI analysis uses ESAL constants that are based on the number of axles for a given vehicle. This is roughly based on the following Federal Highway Administration vehicle classifications, also shown in Figure 7:

- Classification 5 = 2 axle
- Classification 6 = 3 axle
- Classification 7 & 8 = 4 axle
- Classification 9-13 = 5 or more axle

Figure 8 identifies the areas of pavement that have the most use and were deemed necessary for inclusion in the TI analysis. The results for the 16-month construction duration are shown in Table 10. More detailed information about the calculation is included in Appendix B - Calculations.

AADTT – Average Annual Daily Truck Traffic

6.0 CONCLUSIONS

6.1 SIGNIFICANCE OF IMPACTS

A stated goal of California is to transition towards renewable sources of energy. California's Renewable Portfolio Standard Program and Senate Bill 100 call for 100 percent of all electricity sold in California to come from carbon-free resources by 2045, including 60 percent renewables by 2030 (RPS 2019). Fresno County does not have separate goals; however, it has shown initiative in moving towards California's energy initiatives with the Energize Fresno Master Community Design (Energize Fresno 2017). The Master Community Design is specifically within the City of Fresno and includes efforts to expand renewables and transmission.

California's energy initiatives and the assessment of temporary transportation impacts are an important part of the cost and consideration in how and when developments occur to further the goal of renewable and affordable energy. The significance or insignificance of the LOS, VMT, and TI performance measures are discussed below. In short, the LOS impacts are significant, but very short duration, and the VMT, and TI impacts are insignificant.

6.1.1 Level of Service

The LOS analysis indicates that there will be an impact to each intersection utilized by the Project during one peak month of construction based on the thresholds included in the Guidelines. The Guidelines thresholds of significance are based on the Fresno County's General Plan *Transportation and Circulation Element*. Any intersection that has an increase in traffic delays resulting in a drop in LOS by at least one classification is considered a significant impact and any intersection that is worse than LOS C for rural areas or LOS D for urban areas is considered unacceptable (Guidelines; Fresno County 2018).

The LOS assessment related to Project generated traffic indicates that every intersection analyzed will have a significant impact. The intersections of W. Whitesbridge Avenue and Panoche Road as well as S. San Benito Road and Panoche Road remain within acceptable LOS even during the most severe peak hours of the entire construction process. Impacts to the intersections of S. Derrick Avenue. and W. Manning Avenue and S. Derrick Avenue and Panoche Road are both unacceptable and result in a significant change to LOS. Neither of these intersections reach their capacity or fail, however since they are considered unacceptable, construction traffic management options may be necessary at these two intersections.

The impacts would be significant only for the duration of the one peak month (month 7 from the start of construction) when the number of workers is expected to be 553. Overall, impacts to LOS are only significant for approximately 7 months (months 4 through 10 from the start of construction) in accordance with Guidelines (Fresno County 2018).

Impacts are usually assessed by a combination of severity and duration. Since LOS analysis considered nearly all workers arriving within the peak hour, the unacceptable intersection performance is a limited window of two hours a day, five days of the week for four weeks, or a total of 40 hours of unacceptable performance at two intersections over the entire course of construction. Traffic management options are offered in Section 6.2 in an effort to reduce the LOS impacts to be in conformance with the Guidelines.

6.1.2 Vehicle Miles Traveled

As was noted in Section 2.3.2, there is no established threshold of significance for VMT in Fresno County. Since no quantitative, qualitative, or performance level is identified, the significance of 5,767,892 additional miles traveled must be evaluated based on the three guidance criteria from the CEQA Technical Advisory, including "the reduction of greenhouse gas emissions, the development of multimodal

transportation networks, and a diversity of land uses.” Based on the following CEQA criteria, the Project results in a less than significant impact for VMT:

1. Reduction of GHG emissions – The Project is a solar facility and the chief aim of constructing solar facilities is the reduction of dependence on GHG emitting fossil fuel energy sources. The Project will provide clean renewable energy for 30 years once completed. Additionally, Luna Valley conducted an *Air Quality and Greenhouse Gas Technical Report* for Fresno County which concluded a “less than significant impact” for both construction and operations emissions. The GHG technical report identified a quantitative threshold of significance for GHG emissions. The analysis included in that report accounted for construction traffic emissions to determine the total emissions for the Project. Using this definitive quantitative metric yielded a “less than significant impact.” Based on this conclusion a threshold value for VMT would likely be much higher than the Project generated VMT. This assertion is in line with the fact that the guidance for conducting VMT analysis originated with GHG emissions reduction regulations and goals and the guidance states “OPR recommends using quantitative VMT thresholds linked to GHG reduction targets when methods exist to do so.”
2. Diversity of land use – Diversity of land use is a much more difficult criteria to quantify for a comparative analysis; however, the Project expands land use diversity to accommodate the increase in energy demand. This development changes land use from undeveloped cropland to renewable energy production. Put simply, in order for California to reach its energy goals many thousands of acres will need to be converted to alternative energy sources. Because the Project assists in that goal and there are very few means of reducing the VMT while constructing the Project, the additional VMT are considered insignificant.

6.1.3 Traffic Index

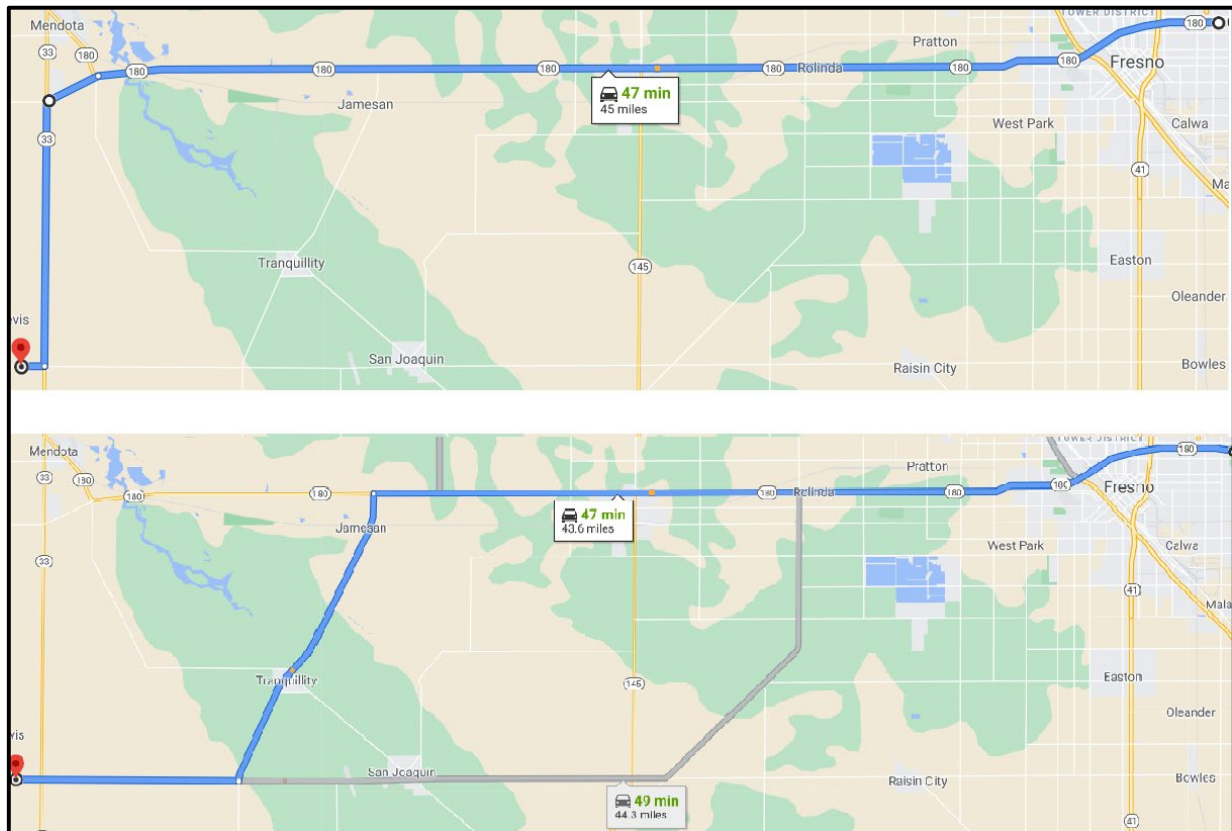

The results of the TI analysis indicate that the Project will have a less than significant impact to the pavement on the roads adjacent to the Project location. The Project shows no increase in TI over a 16-month design life. This result is true despite analysis being performed on a 16-month period which exaggerates impacts as compared to an analysis using the design life of the pavement.

6.2 CONSTRUCTION TRAFFIC MANAGEMENT RECOMMENDATIONS

Based on analysis, mitigation for TI and VMT is not necessary. Construction traffic would increase LOS at certain intersections to levels that are inconsistent with County Guidelines. The Project can reduce these temporary LOS impacts through construction traffic management measures, as follows:

Alternate Routes. Motorists naturally seek alternative routes when delays become intolerable, and the construction contractor may also require workers to use a different route to avoid W. Manning Avenue. HCM LOS definitions do not consider delays intolerable until LOS E, however, it is likely that even with LOS D, the Project workers will seek alternative routes. Workers that commute from Fresno have two alternative routes that are shown in Figure 9. Seeking alternate routes would improve LOS everywhere except the intersection at W. Manning Avenue and S. Derrick Avenue. A construction contractor could also take steps to require some workers to use a different route to avoid the intersection at W. Manning Avenue and S. Derrick Avenue, if it were necessary.

Temporary Traffic Control Plan through Flagging Operations. The use of flaggers to ensure the safety and traffic flow are an economical and effective way to alleviate LOS impacts. Flaggers allow an intersection to function more closely to a signalized intersection. When too many cars are stopped on the minor leg, a flagger can stop the traffic on the major leg of the intersection which is normally uncontrolled and allow a platoon of delayed cars to all go through at once. A flagger is a likely an effective construction traffic management measure to alleviate traffic impacts the Project is expected to create. Flaggers at the intersections would be necessary only for approximately two hours a day for approximately one month during peak construction.

ROUTE ALTERNATIVES FOR CONSTRUCTION TRAFFIC
FIGURE 9

6.3 CONCLUSION STATEMENT

The construction of the Project would result in significant LOS impacts at certain intersections, based on the thresholds included in the Guidelines; however, these impacts would be temporary. The unacceptable drop in LOS would only occur for one month, and an acceptable but still significant drop in LOS would only occur for six additional months during the peak of construction. The TI for the paved roads adjacent to the solar site is unchanged by the Project’s heavy vehicle traffic and would have no impact. The additional vehicle miles that would be traveled by workers and delivery trucks during construction of the Project is considered a less than significant impact. Long-term, the Project has no impact on LOS, TI, or VMT during the operational lifecycle.

APPENDIX B – CALCULATIONS

Purpose

Calculations were performed with the intent of quantifying the significance of traffic impacts to transportation infrastructure caused by the construction and operations of the Luna Valley Solar Project. This was accomplished utilizing the Level of Service (LOS), Vehicle Miles Traveled (VMT), and Traffic Index (TI) methods as dictated by County Guidelines and the corresponding regulatory guidelines for conducting each type of analysis.

References

1. TRB, 2016. "Highway Capacity Manual".
2. Caltrans, 2017. "Highway Design Manual".
3. CEQA, 2018. "Technical Advisory on Evaluating Transportation Impacts in CEQA".
4. County of Fresno, 2018. "Guidelines for the Preparation of Traffic Impact Studies Within the County of Fresno".

Design Criteria

Per the County of Fresno guidelines the goal level of service for all intersections and roads outside of urban areas is LOS A, B, or C. LOS D is acceptable in Urban areas and may be acceptable for temporary circumstances in rural areas as well. The Highway Capacity Manual (HCM) also stipulates a value for Peak Hour Factor of 0.88 for rural areas and a lane capacity of 1800. These standard values were used in the calculations.

Assumptions

1. A truck or heavy vehicle is assumed to be 3 passenger car equivalents for LOS.
2. The analyzed scenario represents the worst feasible scenario during construction and therefore all normal or average days would have considerable better LOS.
3. Estimates for number of workers do not exist in the Trip Generation Manual, therefore; values provided are assumed to be accurate and reflect a high level of experience and expertise in project planning and estimation.
4. Heavy vehicles are assumed to be 10% of the existing background traffic when actually percentage is not available.
5. S. Derrick Ave. at both S. Manning Ave. and Panche Rd. intersections do not have dedicated right turn lanes, however, there is a very large flared shoulder at the intersection and extra striped area. Therefore, it is assumed that most motorists treat this as a separate lane and the calculations modeled the intersection as have a dedicated right turn lane.
6. No pedestrians are present at the intersection because it is rural and there are no sidewalks.

Calculations

The following is the list of analyzed infrastructure for which calculations are included:

- AM Peak Hour at intersection of S. Derrick Ave. and Panoche Rd. for existing conditions.
- PM Peak Hour at intersection of S. Derrick Ave. and Panoche Rd. for existing conditions.
- AM Peak Hour at intersection of S. Derrick Ave. and W. Manning Ave. for existing conditions.
- PM Peak Hour at intersection of S. Derrick Ave. and W. Manning Ave. for existing conditions.
- AM Peak Hour at intersection of S. Derrick Ave. and Panoche Rd. for peak construction conditions. (Updated 12/9/2020)
- PM Peak Hour at intersection of S. Derrick Ave. and Panoche Rd. for peak construction conditions. (Updated 12/9/2020)
- AM Peak Hour at intersection of S. Derrick Ave. and W. Manning Ave. for peak construction conditions. (Updated 12/9/2020)
- PM Peak Hour at intersection of S. Derrick Ave. and W. Manning Ave. for peak construction conditions. (Updated 12/9/2020)
- AM Peak Hour at intersection of S. San Benito Ave. and Panoche Rd. for existing conditions.
- PM Peak Hour at intersection of S. San Benito Ave. and Panoche Rd. for existing conditions.
- AM Peak Hour at intersection of S. San Benito Ave. and Panoche Rd. for peak construction conditions. (Updated 12/9/2020)

- PM Peak Hour at intersection of S. San Benito Ave. and Panoche Rd. for peak construction conditions. (Updated 12/9/2020)
- AM Peak Hour at intersection of W. Whitesbridge Ave. and Panoche Rd. for existing conditions.
- PM Peak Hour at intersection of W. Whitesbridge Ave. and Panoche Rd. for existing conditions.
- AM Peak Hour at intersection of W. Whitesbridge Ave. and Panoche Rd. for peak construction conditions. (Updated 12/9/2020)
- PM Peak Hour at intersection of W. Whitesbridge Ave. and Panoche Rd. for peak construction conditions. (Updated 12/9/2020)
- AM Peak Hour on S. Derrick Ave. for existing conditions.
- PM Peak Hour on S. Derrick Ave. for existing conditions.
- AM Peak Hour on S. Derrick Ave. for peak construction conditions. (Updated 12/9/2020)
- PM Peak Hour on S. Derrick Ave. for peak construction conditions. (Updated 12/9/2020)
- TI for S. Derrick Ave. north of W. Manning Ave. for Existing Conditions
- TI for S. Derrick Ave. north of W. Manning Ave. for Construction Conditions
- TI for W. Manning Ave. West of Project access location for Existing Conditions
- TI for W. Manning Ave. West of Project access location for Construction Conditions
- TI for W. Manning Ave. between Project access location and S. Derrick Ave. for Existing Conditions
- TI for W. Manning Ave. between Project access location and S. Derrick Ave. for Construction Conditions
- VMT weekly for Project Construction
- VMT total for Construction
- VMT total for Operations

Level of Service

Level of Service calculations were all performed using the HCM standard software Highway Capacity Software version 7 ((HCS-7) All calculation reports are included as Attachment A. The summary of Results is as follows:

	Existing Condition				Construction Condition			
	AM		PM		AM		PM	
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
S. Derrick Ave. and Panoche Rd	11.1	B	11.4	B	28.0	D	18.2	C
S. Derrick Ave. and W. Manning Ave.	10.4	B	10.8	B	14.9	B	29.8	D
S. San Benito Ave. and Panoche Rd.	9.5	A	9.6	A	12.8	B	13.0	B
W. Whitesbridge Ave. and Panoche Rd.	10.7	B	10.6	B	10.8	B	18.5	C
S. Derrick Ave.	1.7*	A	1.7*	A	10.1*	A	10.1*	A

* The delay column for S. Derrick Ave. is the density in PCPMPL as that is a road segment.

Vehicle Miles Traveled

Vehicle Miles Traveled (VMT) is simply number of vehicles times distance. Materials and worker sourcing locations are simplified to reduce the number of values. A distance of 45 miles is used as a conservative average distance to Fresno. Much of the city as well as both rail yards are within that distance so it is a reasonable approximation of the average of various materials locations, equipment locations, and worker lodging locations. 12 miles to Mendota includes all of Mendota and all of Tranquility and San Joaquin are within that distance which makes it a useful approximation of worker lunch trips which a maximum of 4% of workers are likely to do on a given day.

Traffic Index Calculations

Per the Caltrans Highway Design Manual (HDM) TI is calculated as follows:

$$TI = 9.0 \left(\frac{ESAL * LDF}{10^6} \right)^{0.119}$$

Where: TI = Traffic Index for a given design Life

ESAL = Total number of cumulative 18-kip Equivalent Single Axel Loads for all truck/bus types over the design life of the pavement structure calculated using the ESAL constants given.

LDF = Land Distribution Factor as determined from the Table in the HDM. Because there is only one lane in each direction on both roads this Factor is 1.0 for this Project.

ESAL Constants

Vehicle Type (by Axle Classification)	10-Year Constants	20-Year Constants	30-Year Constants	40-Year Constants
Two-axle trucks or buses	690	1,380	2,070	2,760
Three-axle trucks or buses	1,840	3,680	5,520	7,360
Four-axle trucks	2,940	5,880	8,820	11,760
Five or more-axle trucks	6,890	13,780	20,670	27,560
Two-axle buses ⁽¹⁾	1,380	2,760	4,140	5,520
Three-axle buses ⁽¹⁾	6,808	13,616	20,424	27,232

Note that the 10-year, 20-year, 30-year and 40-year constants are related linearly. Fresno County Requested that TI be calculated for a design life equivalent to the duration of construction which is 16 months or 1.33 years. The ESAL constants can be back calculated for this design life since the constants are related on a linear basis. Performing this back calculation yields:

Vehicle Type	16 Month Constants
Two-axle Trucks	92
Three-axle Trucks	245
Four-axel Trucks	392
Five or more axel Trucks	919

As no busses are expected on the routes the calculations were simplified to exclude the two bus types. Tube counts were available on Manning Ave. from the Scarlet Solar Traffic Impact Study and Caltrans had data available for Derrick Ave that broke down traffic by vehicle classification. This provided Annual Average Daily Truck Traffic (AADTT) as required for TI analysis. Based on the materials and equipment being delivered it is believed that nearly all trucks delivering materials and equipment will be standard 5-axle semi-trucks (92% of all heavy vehicle traffic. The additional 8% are expected to be 3-axle vehicles such as concrete trucks or other small equipment trucks. 40% of the trucks are anticipated to come from the Port in Oakland, CA and arrive to the sight via eastbound Manning Ave. The Remaining 60% will likely from from Fresno, CA. The results are as follows and as shown in the TIS Report.

Vehicle Type		Manning West of Site Entrance		Manning East of Site Entrance		SB Derrick North of Manning	
Existing Traffic Index	Two-axle trucks	3		21		252	
	Three-axle trucks	36		20		30	
	Four-axle trucks	31		10		20	
	Five or more-axle Trucks	122		168		193	
	AADTT	192		219		495	
	Total ESAL	133,337		165,095		215,687	
	Traffic Index	7.1		7.3		7.5	
Construction Traffic Index	Two-axle trucks/AADTT	0	0.0	0	0.0	0	0.0
	Three-axle trucks/AADTT	0	0.0	130	0.3	130	0.3
	Four-axle trucks/AADTT	0	0.0	0	0.0	0	0.0
	Five-axle Trucks/AADTT	648	1.3	842	1.7	842	1.7
	Trucks on Route/AADTT	648	1.3	972	2.0	972	2.0
	Added ESAL	917		1,240		1,240	
	Total ESAL	134,254		166,335		216,927	
	Traffic Index	7.1		7.3		7.5

1 INTRODUCTION

1.1 PROJECT OVERVIEW

The Luna Valley Solar Project (Luna Valley Solar; Project) is a proposed photovoltaic (PV) solar electricity generating facility and energy storage system and associated infrastructure project that would produce up to 200 megawatts of alternating current (AC) energy at the point of grid interconnection. The Project would include a solar energy generating facility, direct current (DC) electricity to AC electricity power inverters and transformers or power conditioning stations, a Project on-site substation, battery energy storage system, and a connection to the Pacific Gas and Electric (PG&E)-owned Tranquillity substation.

1.2 PURPOSE OF WATER SUPPLY ASSESSMENT

The objective of this report is to provide a Water Supply Assessment (WSA) pursuant to the requirements of California Senate Bill (SB) 610, for the Luna Valley Solar Project.

The County of Fresno (County) has determined that the Luna Valley Solar Project is a project as defined by Water Code Section 10912, subject to the California Environmental Quality Act and shall require a WSA. The objective of this report is to provide analysis of the water supply and determine its availability during normal, single dry, and multiple dry water years during a 20-year projection, which will meet the projected water demand associated with the proposed Project within the 20-year projection, in addition to the area's existing and planned future uses, including agricultural and manufacturing uses pursuant to the requirements of California SB 610.

1.3 SB 610 OVERVIEW AND APPLICABILITY

SB 610, passed in 2002, amended the California Water Code to require detailed analysis of water supply availability for certain types of development projects, and to improve the link between information on water supply availability and certain land use decisions made by cities and counties. SB 610 requires detailed information regarding water availability to be provided to the city and county decision-makers prior to approval of specified large development projects. This information is to be included in the administrative record that serves as the evidentiary basis for an approval action by the city or county on such projects. SB 610 recognizes local control and decision making regarding the availability of water for projects and the approval of projects.

SB 610 requires that a project be supported by a WSA if the project is subject to the California Environmental Quality Act and is an industrial project of more than 40 acres in size regardless of size or type, or would demand an amount of water equivalent to, or greater than, the amount of water required by a 500-dwelling unit project. According to SB 610 Guidelines, one dwelling unit typically consumes 0.3 to 0.5-acre feet per year (AFY), which would amount to 150 to 250 AFY for 500 units. Projects must analyze whether the total projected water supplies determined to be available for the respective project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to the existing and planned future uses, including agricultural and manufacturing uses. The primary question to be answered in a WSA is as follows:

Will the total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection meet the projected water demand of the proposed project, in addition to existing and planned future uses of the identified water supplies, including agricultural and manufacturing uses?

2 PROJECT LOCATION, DESCRIPTION, AND WATER DEMAND

2.1 PROJECT LOCATION

The approximately 1,300-acre Project site is located in unincorporated Fresno County and generally bound by flat, agricultural lands and other solar energy generation facilities. The nearest city is Tranquillity, approximately 9 miles to the east-northeast. Interstate 5, paralleled to the east by the California Aqueduct, is approximately 11 miles to the west as well as to the south of Project area. The cities of Mendota and San Joaquin are approximately 10 miles north and east of the Project area, respectively. The San Joaquin Airport is roughly 9.5 miles east of the Project area.

More specifically, Highway 33 (South Derrick Avenue) makes up the eastern boundary of the Project area. The western edge of the Project area is approximately 2,600 feet east of S. Bernardino Avenue, the northern edge is approximately 1,400 feet south of W. South Avenue, and the southern edge is approximately 1,300 feet north of W. Dinuba Avenue. W. Manning Avenue cuts through the approximate middle of the Project area from east to west and S. Ohio Avenue cuts through the approximate middle of the Project area from north to south.

The Project site is entirely within the U.S. Geological Survey 7.5-minute topographic quadrangle of Levees. The Project area is located within Township 15 South, Range 14 East, Sections 23, 24, 25, and 26. The Project site is located approximately within the latitudes of 36.59° and 36.61° and within the longitudes of -120.39° and -120.42° (in decimal degrees). The Project area centroid is located at approximately latitude/longitude 36°36'12"N/120°24'05"W. The Project site is shown on Figure 1.

2.2 PROJECT DESCRIPTION

The Project would include the following components:

- PV solar panels mounted on a single axis tracking system organized in rows in a uniform grid pattern referred to as solar arrays, electrically connected to form a utility-scale PV solar system.
- Approximately 62 Power Conditioning Stations (inverters and transformers) that would take DC electricity from the connected strings of PV panels and convert it to AC electricity. The power conditioning station transformers would step up the AC electricity to the appropriate voltage for collection into the substation.
- A substation that would include transformers, breakers, switches, meters, control room, emergency generator and other related equipment. The substation footprint is estimated at 350 feet by 300 feet with transmission pole structures up to 200 feet in height.
- An energy storage system with a footprint of 4 acres that would include battery storage system enclosures and controllers, DC/DC converters, and power conditioning stations consisting of inverters and medium voltage transformers.
- PG&E Transmission Line to interconnect the Luna Valley Solar Project to the PG&E Tranquillity Switching Station which includes approximately 1,300 feet of above-ground 230 kilovolt conductor strung on approximately four new tubular steel poles of up to 140 feet in height. An underground fiber optic line would also be included for communications.
- Access roads to the Project with main entrances along W. Manning Avenue and Highway 33 (S. Derrick Avenue).
- Chain-link perimeter fencing with concertina wire if deemed necessary. Access gates would be provided at each site entry road.
- Telecommunications to connect to existing local telecommunication services.

- Meteorological Data Collection System through a variety of instruments.
- Signage identifying Project owner for safety / security.
- Motion-activated security lighting.
- Operation and Maintenance building, of approximately 100 feet by 500 feet. Sanitary facilities would be provided through septic system or leach field.

Water usage information in this report is provided for the whole Project and includes construction and operations-related water demand. Construction-related water demand for the Project is determined by the site preparation activities required, including dust control, soil conditioning, labor workforce needs, and by the duration of the construction period.

2.2.1 Existing Public Water System

A public water system is defined in Water Code Section 10912 as “a system for the provision of piped water to the public for human consumption that has 3,000 or more service connections.” The proposed Project is located within the jurisdiction of the Westlands Water District (WWD), which provides agricultural water to users within the jurisdiction, and does not deliver treated water for human consumption and is not considered a public water system. The Project site is not connected to a public water system and there are no public water systems that can serve the proposed Project. Where that is the case, the County is required to prepare the WSA under the Water Code Section 10910(b).

2.2.2 Existing Urban Water Management Plans

Public water systems are required by the California Water Code to prepare Urban Water Management Plans (UWMP) to carry out “long-term resource planning responsibilities to ensure adequate water supplies to meet existing and future demands for water” (Water Code Section 10610.2). UWMPs are prepared using input from multiple water systems operating in the region and include assessment of the reliability of water supply over a 20-year period and account for known and projected water demands during that time, including during normal, single-dry, and multiple-dry water years. WSAs commonly incorporate assessment of project-related water demands from UWMPs and other assessments and plans.

There is no current UWMP that accounts for the proposed project’s water demands. WWD mainly supplies water for agricultural use. Therefore, WWD is not considered an “Urban Water Supplier” and is not required to submit an UWMP. WWD does however, submit a Water Management Plan.

2.3 PROJECTED WATER DEMANDS

During construction of the Project, water is anticipated to be supplied by an on-site WWD groundwater well, and by WWD through a 4-inch municipal and industrial (M&I) meter. It is projected that construction would require up to 300 acre-feet (AF) of water over a duration of 16 months for dust suppression, truck wheel washing, grading, and other construction-related purposes. Domestic potable water would not be required during construction, and restroom facilities would be provided by portable units serviced by a third party.

During operation and maintenance of the Project, minimal water would be required for panel washing activities, equipment washing, and general maintenance. The need for panel washing would be infrequent (e.g., months to years between washings) and determined based on operating considerations, including actual soiling of the PV panels and any expected benefit from cleaning. Should cleaning be necessary, demineralized water would be sprayed on the PV panels to remove dust or a dry-cleaning method may be

used. It is anticipated that operation and maintenance would require up to 3 AFY. Water for operation and maintenance would be obtained from WWD through a municipal and industrial meter.

3 WATER SUPPLY

3.1 WESTLANDS WATER DISTRICT

The WWD utilizes a combination of imported surface water, local groundwater and local surface water to serve its customers. The majority of WWD's customers are agricultural customers that occupy 568,000 irrigable acres out of the WWD's 614,000 total acres.

Surface water supplies are imported from the Sacramento Delta by the Central Valley Project (CVP) via the Delta-Mendota Canal and the San Luis Canal. The amount of water received from the CVP will vary in any given year depending on the amount of precipitation received in northern California. WWD has long-term contractual and legal entitlements with the United States Bureau of Reclamations (USBR) for a firm supply of 1,191,185 AF of CVP water during each water year, although this amount is usually not delivered. WWD supplements the remainder of its water needs through pumping of local groundwater.

WWD does not operate or manage its own local water supplies. Instead, it relies on conjunctive use of landowners to pump groundwater wells and divert surface waters. WWD has a Distribution System Integration Program which allows landowners to use the WWD's water distribution system to convey groundwater to other points of use within the WWD jurisdiction. This conjunctive use of surface and groundwater improves overall water supply reliability by making more efficient use of water that is available. In wet periods, use of surface water is encouraged to preserve groundwater supplies. In droughts, greater flexibility in the use of groundwater is facilitated to extract the maximum benefit from its resources (WWD 2015).

As previously noted, WWD has entitlement from CVP to a firm supply of 1,191,185 AF of CVP water during each water year. Depending on drought conditions and water supply availability in the Bay Delta, this total amount may not be delivered. In some years, WWD may acquire additional water pursuant to its entitlements, or other water from other sources. Table 1 summarizes WWD's water supply history from 1988 to 2020 (anticipated). As can be observed by comparing annual groundwater versus net CVP supply, the amount of groundwater pumped from the local aquifer (the Westside subbasin) is inversely proportional to the imported surface water received via the CVP.

Table 1. Westlands Water District – Water Supply History

Water Year	CVP Allocation %	Net CVP (AF)	Groundwater (AF)	Water User Acquired (AF)	Additional WWD Supply (AF)	Total Supply (AF)	Fallowed Acres

Source: WWD 2015

*Estimated

Definitions:

Water Year – March 1 to February 28 (29 Leap Year)

CVP Allocation – Final CVP water supply allocation for the year (100% = 1,150,000 AF)+(Reassignment = 46,948 AF)

Net CVP – CVP Allocation adjusted for carry over and rescheduled losses

Groundwater – Total groundwater pumped (see WWD's Deep Groundwater Report)

Water User Acquired – Private Landowner water transfers

Additional WWD Supply – Surplus water, supplemental supplies, and other adjustments.

Fallowed Acres – Agricultural land out of production

Water Management Programs

The WWD's water service contracts with the United States Bureau of Reclamation require that the WWD adopt a Water Management Plan that demonstrates that the WWD is implementing Best Management Practices to promote water conservation. This Plan is in accordance with State and Federal laws and was prepared to satisfy requirements of the Agricultural Water Management Planning Act. This Plan is to be updated every five years in conjunction with USBR's Updated Standard Criteria for Agricultural and Urban Water Management Plans. The plan develops several best management practices for contractors. The last Water Management Plan was completed in 2017 (WWD 2017).

3.2 LOCAL GROUNDWATER SUPPLY – WESTSIDE SUBBASIN

General

The proposed Project is located within the San Joaquin Valley Groundwater Basin, Westside Subbasin. The Westside Subbasin encompasses an area of approximately 640,000 acres and consists mainly of the lands in WWD. The San Joaquin Valley is surrounded on the west by the Coast Ranges, on the south by the San Emigdio and Tehachapi Mountains, on the east by the Sierra Nevada and on the north by the Sacramento-San Joaquin Delta and Sacramento Valley. The northern portion of the San Joaquin Valley drains toward the Delta by the San Joaquin River and its tributaries, the Fresno, Merced, Tuolumne, and Stanislaus Rivers. The southern portion of the valley is internally drained by the Kings, Kaweah, Tule, and Kern Rivers that flow into the Tulare drainage basin including the beds of the former Tulare, Buena Vista, and Kern Lakes (DWR 2006).

The groundwater basin is comprised generally of two water bearing zones: (1) an upper zone above a nearly impervious Corcoran Clay layer containing the Coastal and Sierran aquifers and (2) a lower zone below the Corcoran Clay containing the Sub Corcoran aquifer. These water bearing zones are recharged by subsurface inflow from the west, east, and northeast, and by percolation of applied surface water (WWD 2015).

Adjudication

The Westside Subbasin is not adjudicated, meaning that landowners may extract groundwater underlying their property without a permit regulating groundwater extraction. Landowners may use the groundwater on a “equal and correlative” basis, and all property owners have a shared right to reasonable use of the aquifer.

Safe Yield

Safe yield is the amount of groundwater that can be extracted without lowering the groundwater levels over the long term. The WWD Groundwater Sustainability Plan has identified the current safe yield of groundwater to be approximately 270,000 AFY.

Groundwater Level Trends

In general, the aquifer water level will vary on an annual basis depending on the amount of water percolated into the aquifer and the amount pumped via groundwater wells. The water levels will decline during times of drought and increasing pumping and water levels will increase during periods of an abundance of rain and decreased pumping. Groundwater levels were generally at their lowest levels in the late 1960s prior to importation of surface water. The CVP began delivering surface water in 1967–1968. Water levels gradually increased to a maximum in about 1987–1988, falling briefly during the 1967–1977 drought. Water levels began dropping again during the 1987–1992 drought with water levels showing this affect until 1994. Through a series of wet years, after the drought, 1998 water levels recovered nearly to 1987–1988 levels (DWR 2006).

Groundwater elevations and the estimated amount of groundwater pumped for a sixty-year period between 1956 and 2015 is included in Table 2 below. The table shows the average mean sea level elevation of the groundwater in the lower water bearing zone. It can be seen from the data below that groundwater levels in the Westside Subbasin are directly affected by the amount that is pumped from the basin and groundwater levels fall during years of high pumping. It can also be seen that groundwater levels recover during years of low pumping. Groundwater levels following years of high pumping show an almost immediate recovery after pumping at levels that exceeded safe yield. During the drought in 1987–

1992, water levels reach a low of -62 feet in 1992 when pumping was at a high of 600,000 AF. The following year 1993 water levels recovered 63 feet to an elevation of 1 foot.

Table 2. Westlands Water District – Groundwater Pumping Versus Groundwater Level

Year	Pumped (AF)	Elevation (mean sea level feet)	Elevation Change (feet)	Year	Pumped (AF)	Elevation (mean sea level feet)	Elevation Change (feet)

(WWD 2015)

Groundwater Sustainability

The Sustainable Groundwater Management Act requires local agencies to establish a governance framework for managed groundwater basins. The vast majority of the Westside Subbasin is located within the boundaries of Westland Water District and Westland Water District is the governing agency for managing those portions of the Westside Subbasin.

In January, 2020 WWD prepared the Westside Subbasin Groundwater Sustainability Plan (GSP). The purpose of the GSP, among other goals, is to establish sustainability goals and to determine projects and/or management actions to achieve sustainability by 2040. Some of the general strategies identified to achieve sustainability by 2040 include firming up access to more reliable surface water deliveries, conjunctive use, demand management through the adoption of an allocation system, improved efficiencies by transfer/trading, and surface water substitution within subsidence prone areas.

The GSP also established a water budget which considered the period from 2017 through 2070 and incorporated factors accounting for climate change. The groundwater budget estimates the subbasin to be relatively balanced over the historical water budget period and projects sustainable groundwater conditions in the subbasin by 2040 and through 2070 (i.e. for the planning periods). Some of the specific projects/management actions identified in the GSP required to meet the water budget include: 1) An update to Central Valley Project facilities and management will allow for an increase in surface water imports 2) Implementation of a groundwater pumping allocation plan which will have a transition period from 2022 through 2030 and resulting in less groundwater pumping 3) implementation of a Aquifer Storage and Recover program and 4) Construction of percolation basins along the western portion of the subbasin.

Following the management actions included in the GSP will ensure adequate water availability from the Westside Subbasin for the next 20 years, including water for the Project.

Groundwater Availability

According to the GSP, groundwater levels within the basin are currently declining, indicating that the basin is in an overdraft condition. However, the GSP notes that the amount of overdraft compared to the capacity of the basin is small. One of the main components of the plan in the GSP to address this overdraft is to reduce future groundwater pumping. As previously mentioned, the GSP includes a transition period from 2022 through 2030 where mild, annual groundwater pumping reductions will be imposed. At the end of the transition period, the basin is expected to be balanced and sustainable. WWD has indicated that 300 AF could be withdrawn from the basin either before or within the transition period, and compliance with the GSP could be maintained. However, the GSP does not account for annual groundwater production from the Project after 2030. Therefore, the basin could provide construction water to the Project, but cannot provide annual operational water to the Project.

3.3 OTHER WATER

Temporary Water (United States Bureau of Reclamations Section 215 Water (#574))

Section 215 of the USBR Reform Act of 1982 defines temporary water supplies and allows non-storable water to be applied to lands otherwise ineligible to receive federal water. This water is available because San Luis Reservoir is full and export capacity from the Jones Pumping Plant, which delivers water from the Delta into the Delta-Mendota Canal, exceeds south of Delta service area demands (WWD 2017). Section 215 water would be delivered through WWD.

During wet years, Section 215 water could possibly be secured for the Project. This could be delivered from high-flow Kings River water delivered via the Fresno Slough, located to the east of the Project. The use of Section 215 waters would not result in any adverse effects to local water supplies.

Reclaimed Water

Reclaimed water is effluent water from wastewater treatment plants that has been tertiary treated so that it may be discharged to the environment. The nearest source of reclaimed water to the Project is the City of Firebaugh Waste Water Treatment Plant, approximately 25 miles southeast of the Project site. To use this water as a source, agreements would need to be reached with the wastewater treatment plant and the Central Valley Regional Water Quality Control Board. The water would be trucked from the treatment plant to the Project site.

Trucked Water

Potable or non-potable water from other sources may be available and trucked in. The cost of this water would generally be higher than other sources and the cost would generally increase as the distance to the source increases. This source of water would generally be available, but in times of drought the distance to the source would likely increase.

4 SUPPLY SUFFICIENCY ANALYSIS

The primary question to be answered in a WSA that is compliant with SB 610 requirements is:

Will the total projected water supply available during normal, single dry, and multiple dry water years during a 20-year projection meet the projected water demand of the proposed project, in addition to existing and planned future uses of the identified water supplies, including agricultural and manufacturing uses?

The amount of CVP water received by the WWD during any given year varies depending on climate conditions and other constraints at the Delta. As such, it is not possible to accurately quantify or forecast water supply availability to the WWD. Groundwater usage and replenishment data availability in the San Joaquin Valley area of California is difficult to obtain, due to a dominance of agricultural water users and a lack of consistent groundwater monitoring and reporting programs. Where data is not available to make quantitative estimates of water supply, reasonable assumptions are made based on available information and data.

4.1 WESTLANDS WATER DISTRICT

The CVP imported surface water allocation to WWD is shared between agriculture and incidental non-agricultural water users. Although most WWD customers are agricultural users, some are non-agricultural M&I users. It has been the policy of USBR to deliver CVP water at a minimum of 75 percent of historical municipal and industrial use, even when agricultural allocations are considered less than that. Historically, when the overall water supply has been reduced, the non-agricultural water allocation may not be reduced by a similar percentage. In certain cases of severe reduction, it is likely that WWD would receive CVP hardship water for health and safety purposes based on the statement of need. WWD water allocated from CVP for non-agricultural use are the last to be curtailed in water shortage situations and can be considered a fairly stable source of water for the proposed Project (WWD 2015). WWD has indicated that the Project, as a solar power project, is eligible for M&I water and has provided a Will Serve Letter, included as Attachment A

Reliability of water supplies used by WWD is dependent on effective management. It is reasonable to assume that the WWD would not use or distribute their allocated water supplies in a manner that would negatively affect the long-term reliability.

4.2 LOCAL GROUNDWATER SUPPLY – WESTSIDE SUBBASIN

During drought years, WWD relies heavily on groundwater resources from the Westside Subbasin. As was shown from historical data of groundwater pumping versus groundwater levels (Table 2), overdraft of groundwater as a result of higher groundwater pumping seems to have no long-term effects on the groundwater basin. In fact, prior to the introduction of CVP water to the region in 1967–1968, average pumping from the basin was approximately 890,000 AFY between 1956 and 1966, and as a result groundwater levels reached an all-time low water level of -156 feet in 1967. Following the introduction of CVP water in 1967, average pumping from the basin dropped to approximately 380,000 AFY for a 10-year period between 1967 to 1978, and groundwater levels recovered 152 feet to a water level of -4 feet in 1978. This trend suggests that any potential overdraft conditions resulting from heavy groundwater pumping are temporary in nature.

Safe yield for the Westside Subbasin is estimated to be approximately 270,000 AFY. The proposed Project requires a total of approximately 300 AF over 16 months for construction activities. If the

construction water were to be equally distributed over two years, this would equate to 0.05 percent of the basin safe yield for each of the two years.

The Westside Subbasin is under the management of WWD. WWD has developed the GSP to manage the basin to ensure that it is sustainable through the next 20 years and beyond. WWD has indicated that the GSP allows groundwater to be used for construction activities. However, due to groundwater pumping limitations imposed by the plan on the subbasin, groundwater cannot be used for ongoing operations and maintenance of the project.

5 SUMMARY AND CONCLUSIONS

This assessment concludes that there is sufficient water supply available from various sources in the Project area to meet Project construction demands and Project operational demands. For short-term construction of the Project, WWD has indicated that they can supply 200 AF, or 2/3 of the 300 AF construction demand from an onsite well. The other 100 AF could be obtained from an on-site WWD M&I meter, per the Will Serve Letter provided as Attachment A.

During operation of the Project, the long-term water demands of 3 AFY would be met from WWD through M&I water. During extreme drought, if 3 AF was not available from WWD, cleaning the PV panels could be performed with a dry-cleaning method, or the time between cleanings could be extended.

Based on this assessment, Luna Valley Solar construction and operational water demands can be met over the next 20 years from various sources, including groundwater and WWD. Construction water impacts to the Westside Groundwater Subbasin will be insignificant and will be accounted for in the Groundwater Sustainability Plan, ensuring the subbasin's long term sustainability. Operational water can be obtained from WWD through an M&I meter which is a fairly reliable source of water. In the event M&I water is unavailable due to extreme conditions, operational water needs could be reduced or temporarily eliminated.

Carlsbad, CA 92008

Subject: Luna Valley Solar I LLC Solar Project

Dear Mr. Kelly,

Westlands Water District (District) has reviewed the operational statement for the proposed solar generation project, Luna Valley Solar I LLC (Project). After reviewing the Project, we have the following comments about the Project:

1. The Project lies within the District boundary. This land does not receive an allocation of water from the District's agricultural water supply. The Project is eligible to receive water through the District's Municipal and Industrial (M&I) supply and the land will continue to have access to the District's distribution system.
2. The District has adopted regulations governing the application for and use of M&I water (Regulations). The Regulations stipulate the quantity of water that will be made available to a water user from the District's Central Valley Project (CVP) contract supply. The District will make available up to five (5) acre-feet per 160 acres of developed solar, annually for operations. A copy of the Regulations is also provided for your information.
3. Clearway must submit an M&I application for consideration in order receive M&I service. Once approved an M&I meter will be installed near the project site, at the applicant's expense.
4. The District, as the owner of the groundwater rights, on the Project site, will authorize up to 200 acre-feet of groundwater pumping annually, during the construction period only.

Thank you for the opportunity to assist in this matter, if you have any additional questions please feel free to contact Juan Pacheco at 559-241-6228.

Sincerely,

Russ Freeman, P.E.
Deputy General Manager of Resources
