SCOPING REPORT

Luna Valley Solar Project

1. Introduction

This report provides an overview of the comments received by the County of Fresno Department of Public Works and Planning, Development Services and Capital Projects Division (County) during the public scoping period for the Environmental Impact Report (EIR) that the County is preparing for the Luna Valley Solar Project (Project), EIR No. 7813.¹

CEQA Guidelines Section 15083 provides that a “Lead Agency may...consult directly with any person...it believes will be concerned with the environmental effects of the project.” Scoping is the process of early consultation with affected agencies and the public prior to completion of a Draft EIR. Section 15083(a) states that scoping can be “helpful to agencies in identifying the range of actions, alternatives, mitigation measures, and significant effects to be analyzed in depth in an EIR and in eliminating from detailed study issues found not to be important.” Scoping is an effective way to bring together and consider the concerns of affected State, regional, and local agencies, the Project proponent, and other interested persons (CEQA Guidelines §15083(b)). Scoping is not conducted to resolve differences concerning the merits of a project or to anticipate the ultimate decision on a proposal. Rather, the purpose of scoping is to determine the scope of information and analysis to be included in an EIR and, thereby, to ensure that an appropriately comprehensive and focused EIR will be prepared that provides a firm basis for informed decision-making. Comments not within the scope of CEQA will not be addressed through the CEQA process.

This report is intended for use by the County in preparing the EIR as formal documentation of initial input received from governmental agencies, the public, and other stakeholders regarding the range of actions, alternatives, mitigation measures, and significant effects to be analyzed in depth in the EIR. It also provides access for other agencies and members of the public to comments received during the scoping period.

2. Description of the Project

Project Summary

Luna Valley Solar I, LLC (the Applicant) has submitted to the County an Unclassified Conditional Use Permit (CUP) application to construct, operate, and ultimately decommission an approximately 200-megawatt alternating current (MWac) photovoltaic (PV) energy generation

¹ The County of Fresno Department of Public Works and Planning is the lead agency pursuant to the California Environmental Quality Act (CEQA) for the preparation of an EIR for the Project.

project with up to 200 MW of energy storage capacity plus related facilities and infrastructure, to be known as the Luna Valley Solar Project. The Project would generate and deliver solar-generated power to the electrical grid via PG&E's existing Tranquillity Switching Station.

The Project consists of three main components: The solar facility, energy storage system, and PG&E interconnection infrastructure. The solar facility would consist of solar PV modules (panels) and support structures, electrical inverters and transformers. The energy storage system would consist of batteries stored within in temperature-controlled enclosures. Related facilities and infrastructure would include an on-site substation, generation tie (gen-tie) lines, access roads, perimeter fencing, telecommunications equipment, a meteorological data collection system, signage, lighting, stormwater facilities, and an operations and maintenance building supported by a septic system and leach field. Water needs would be served via an existing on-site well or by the Westlands Water District.

To interconnect the Project to the California electrical grid, PG&E would extend the footprint of its existing Tranquillity Switching Station by approximately 100 feet to the north, and would construct a new, approximately 1,300-foot 230 kV transmission line to connect the existing switching station to a structure to be built within the Project site. This would include approximately four new tubular poles of up-to 140 feet in height. Fiber optic line also would be provided. The fiber optic lines could be co-located on the transmission line poles or could require separate, adjacent poles. Potential environmental impacts of this proposed PG&E infrastructure will be analyzed as part of the Project.

Project Location

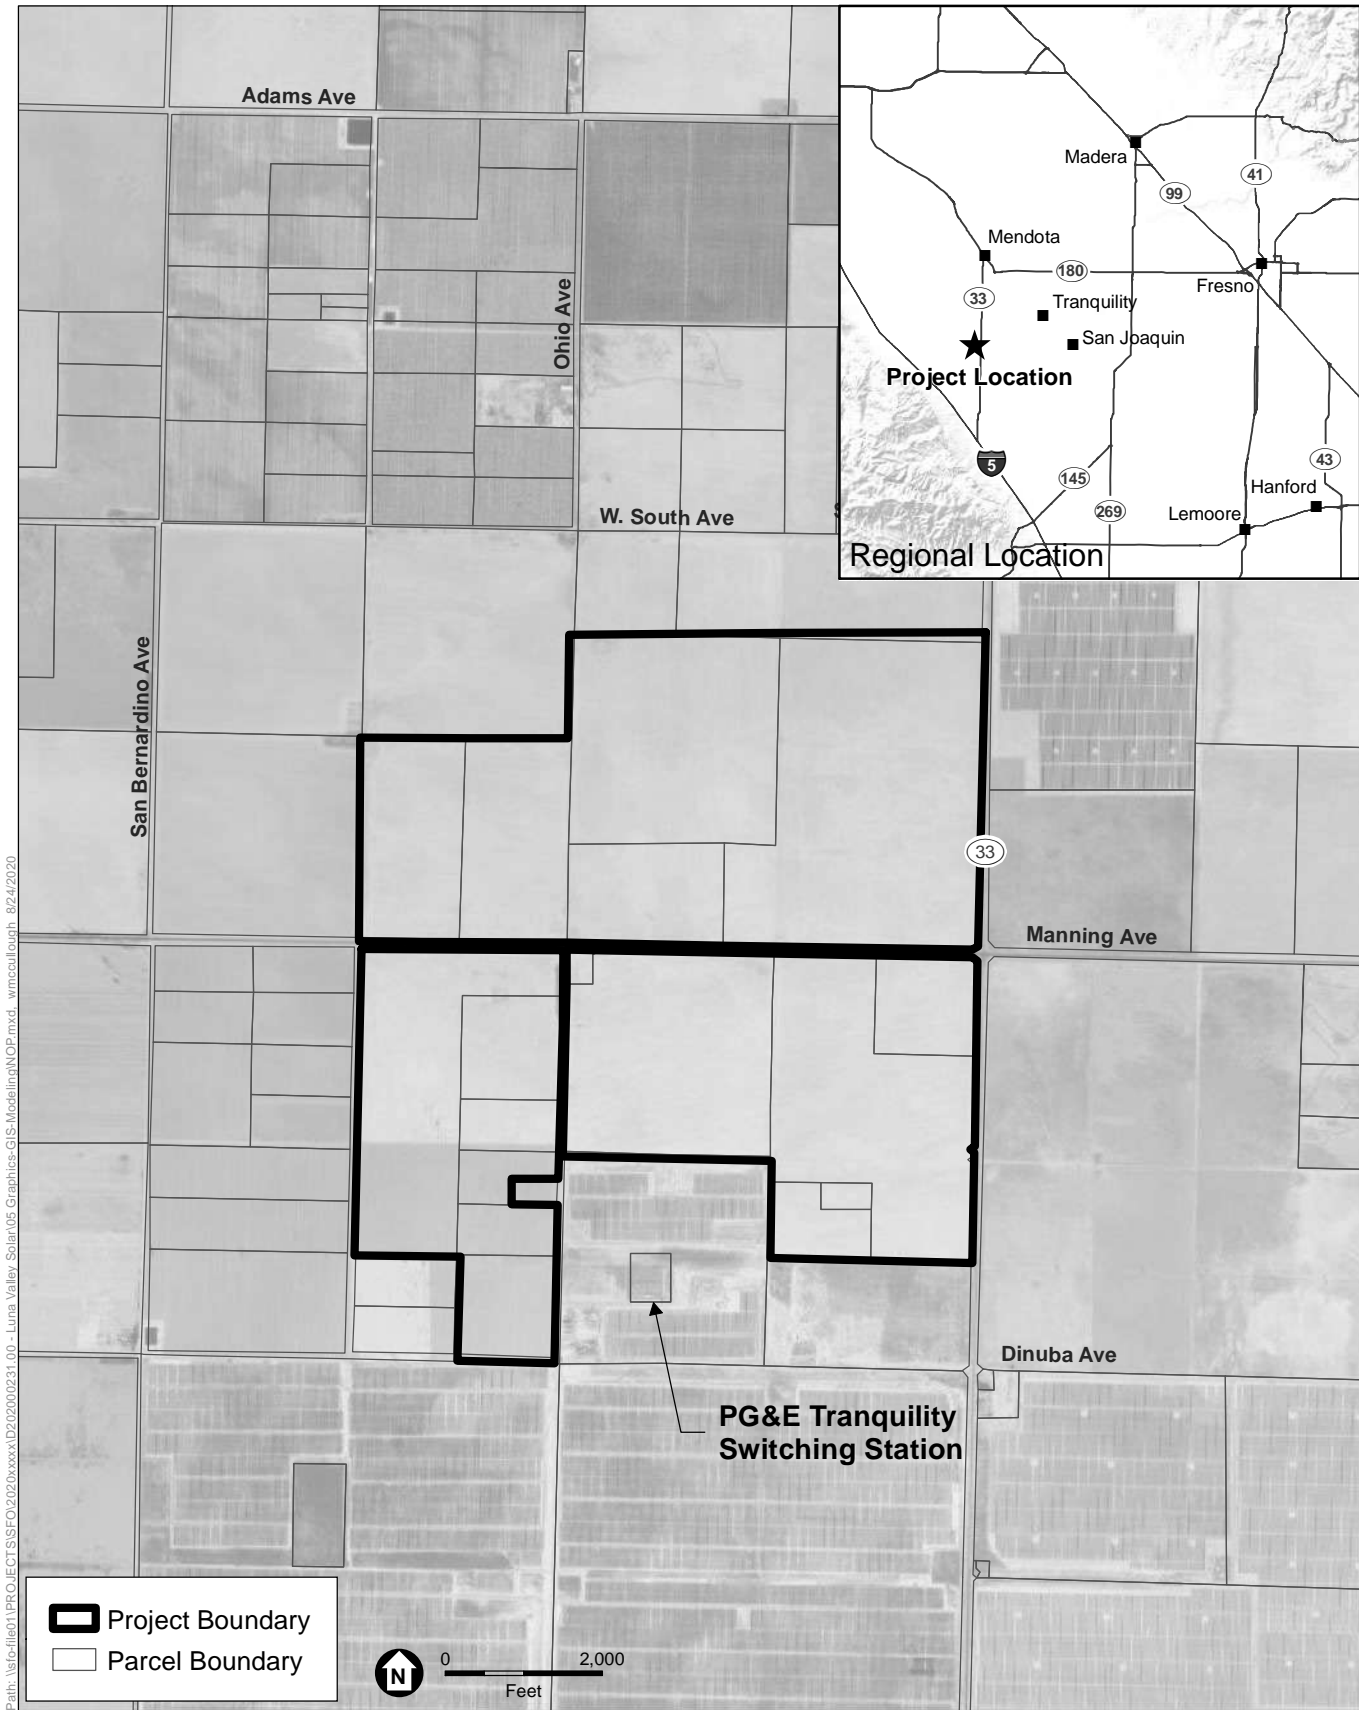

The approximately 1,300-acre Project site is primarily on Westlands Water District-owned lands in unincorporated western Fresno County.² It generally is bounded by State Route 33 (SR 33, also is known as South Derrick Avenue) to the east, Dinuba Avenue to the south, South Bernardino Avenue to the west and West South Avenue to the north. West Manning Avenue bisects the site from east to west; South Ohio Avenue bisects it from north to south. Site access would be provided from S. Ohio Avenue. The nearest communities to the site include Tranquillity (approximately 9 miles to the east-northeast), Mendota (approximately 10 miles to the north), and San Joaquin (approximately 10 miles to the east). Interstate 5 is approximately 11 miles to the west and south. See **Figure 1**, *Luna Valley Solar Project Site Location*.

3. Opportunities for Public Comment

Notification

On August 28, 2020, the County published and distributed a Notice of Preparation (NOP) to advise interested local, regional, state, and federal agencies, as well as the public, that an EIR would be prepared for the Project. The NOP was sent to a mailing list that included Tribes; local, state, and federal agencies; 31 property owners within an area that included the properties within

² One 3.6-acre parcel is owned by the Applicant (APN 028-101-059ST).

Path: \\sfr\file01\PROJECTS\SFSFO\2020\20xxxx\ID20200231_00 - Luna Valley Solar\05 Graphics-GIS-Modeling\NOP.mxd, wmcclough, 8/24/2020

Luna Valley Solar Project

Figure 1
Project Location

1 mile of the Project site; other interested parties; and the Governor’s Office of Planning and Research, State Clearinghouse. The NOP also was emailed to all on the distribution list for whom the County had an email address, and posted with the Fresno County Clerk. The NOP, NOP mailing list, and a copy of the e-mail notification are provided in **Exhibit A**, *Notice of Preparation*. Additionally, an electronic copy of the NOP was posted on the County’s website at: www.co.fresno.ca.us/EIR. The NOP solicited comments on the scope, content, and format of the EIR. Agencies and members of the public were encouraged to submit their comments to the County by U.S. mail, e-mail, or online. Screenshots of the County’s website showing the NOP and the online scoping comment form are provided in **Exhibit B**, *Electronic Access*.

In addition to the NOP, the County notified the public about the public scoping meeting through a newspaper legal advertisement published in *The Business Journal* on August 28, 2020. The legal notice is provided in **Exhibit C**, *Newspaper Notification*. The notification provided basic Project information, the date, time, and participation information for a virtual public scoping meeting, and a brief explanation of the public scoping process.

Public Scoping Meeting

The County conducted a virtual public scoping meeting on Thursday, September 10, 2020 from 6 p.m. to 7 p.m. The presentation (**Exhibit D**) included an overview of the Project, the County’s land use and permitting process, and the environmental review process. Meeting participants included: Jeremy Shaw, Christina Monfette, David Randall, and Chris Motta of Fresno County Department of Public Works and Planning; Cory Barringhaus, Janna Scott, Larry Kass, and Danaka Debow of ESA; and representatives from Luna Valley Solar I, LLC. One member of the public attended the scoping meeting. No comments were received during the meeting.

4. Summary of Scoping Comments

All scoping comments received on or before end of the scoping period are documented in this Scoping Report and will be considered in the EIR. Eight comment letters were received during the scoping period. Table 1 lists the names of commenting parties in the order in which the comments were received. The County has reviewed and relied upon the full text of the comment letters in preparing the EIR; summaries of the environmental issues raised are provided below for ease in review by other agencies and members of the public. The letters are provided in **Exhibit E**, *Scoping Letters*.

Arnaud Marjollet, Director of Permit Services	San Joaquin Valley Air Pollution Control District	G	September 28, 2020
Peter Allison	Voltility	H	October 5, 2020

Scoping input received by the County identifies potential impacts in the areas summarized below:

Air Quality

Concerns regarding the Project's potential impact on air quality were outlined in Letter G by the San Joaquin Valley Air Pollution Control District (SJVAPCD). SJVAPCD requests that details be provided about activities that would result in the emission of pollutants relative to sensitive receptors and, more specifically, that emissions from construction and operation of the Project be identified, quantified, and compared to thresholds for carbon monoxide (CO), oxides of nitrogen (NO_x), reactive organic gases (ROG), oxides of sulfur (SO_x), and particulate matter to determine the potential significance of Project impacts. Letter G recommends that equipment exhaust as well as fugitive dust emissions be quantified, and that emissions analysis be performed using CalEEMod.

If the Project is expected to have a significant impact, SJVAPCD recommends the EIR also include a discussion on the feasibility of implementing a Voluntary Emission Reduction Agreement (VERA) for the Project.

The District recommends the Project be evaluated for potential health impacts to surrounding receptors (on-site and off-site) resulting from operational and multi-year construction toxic air contaminants (TACs) emissions, including from diesel exhaust. The SJVAPCD recommends conducting a screening analysis that includes all sources of emissions to determine if it is necessary to conduct a health risk assessment (HRA).

Letter G notes the Court's decision in *Sierra Club vs. County of Fresno* (2018) 6 Cal.4th 502, and suggests that the EIR should discuss relevant specifics regarding the connection between potential

adverse air quality impacts from the Project with the likely nature and magnitude of potential health impacts. If the potential health impacts from the Project cannot be specifically correlated, explain what is known and why, given scientific constraints, potential health impacts cannot be translated.

SJVAPCD recommends the EIR also include a discussion of whether the Project would result in a cumulatively considerable net increase of any criteria pollutant or precursor for which the San Joaquin Valley Air Basin is in non-attainment.

Letter G also identifies SJVAPCD rules and regulations applicable to the Project, including: District Rule 9510 (to submit an Air Impact Assessment application), Regulation VIII (Fugitive PM10 Prohibitions), Rule 4102 (Nuisance), Rule 4601 (Architectural Coatings), and Rule 4641 (Cutback, Slow Cure, and Emulsified Asphalt, Paving and Maintenance Operations).

Biological Resources

Letter C, from the U.S. Army Corps of Engineers (USACE), states that the study area is under authority of Section 404 of the Clean Water Act for the discharge of dredged or fill material into waters of the United States. To ascertain the extent of waters on the Project site, Letter C suggests that the applicant should prepare a wetland delineation in accordance with the "Minimum Standards for Acceptance of Preliminary Wetlands Delineations" and "Final Map and Drawing Standards for the South Pacific Division Regulatory Program" and submit it to USACE for verification. The range of alternatives considered for the Project should include alternatives that avoid impacts to wetlands or other waters of the United States. Every effort should be made to avoid Project features which require the discharge of dredged or fill material into waters of the United States. In the event it can be clearly demonstrated there are no practicable alternatives to filling waters of the United States, Letter C suggests that mitigation plans should be developed to compensate for the unavoidable losses resulting from Project implementation.

Hazards and Hazardous Materials

Letter A, from the California Department of Conservation, Geologic Energy Management Division (CalGEM), indicates there is one known oil or gas well located within the Project boundary. CalGEM advises against building over, or in any way impeding access to, oil, gas, or geothermal wells. Maintaining sufficient access is considered the ability for a well servicing unit and associated necessary equipment to reach a well from a public street or access way. CalGEM advises that all wells identified on the Project site prior to, or during, development activities be tested for liquid and gas leakage. Failure to plug and re-abandon a well may result in enforcement action, including an order to perform re-abandonment well work, pursuant to Public Resources Code Sections 3208.1 and 3224.

Public Services

The Fresno County Fire Protection District (Letter D) states the Project may be required to annex into the Community Facilities District No. 2010-01. The Project also will be subject to the

requirements of the current Fire Code and Building Code when a building permit or certificate of occupancy is sought.

Transportation

Letter E, from the California Department of Transportation (Caltrans), recommends that the Project pay into the Fresno County Regional Traffic Mitigation Fee. Design and Project alternatives should include the number of employees expected to be on-site for each shift and proposed utilities.

Project alternatives should avoid direct access to and from State Route 33 (SR-33) during all phases of construction and during normal operations. According to the Caltrans Transportation Concept Report, the segment of SR-33 in the vicinity of the Project is currently a 2-lane conventional highway and ultimately planned to be a 4-lane facility within a total of 110 feet of right-of-way (55 feet from the centerline). Caltrans right-of-way maps shows this segment of SR-33 existing at 100 feet with 50 feet from the centerline on the westside of SR-33. An Irrevocable Offer of Dedication to Caltrans for 5 feet of right-of-way is needed to accommodate the ultimate configuration of SR-33

Caltrans may require that a Transportation Management Plan (TMP) for SR-33 be prepared consistent with California's Manual on Uniform Traffic Control Devices. In addition, the TMP may contain a Temporary Traffic Control plan that addresses traffic safety and control through the work zone. The approval of the TMP must be done prior to the approval of an Encroachment Permit.

Components of the Project where adjacent to SR-33 should not encroach into State right-of-way. If the project design proposes to encroach into State right-of-way, approval of an Encroachment Permit will be required. Any proposed traffic control devices within State facilities also will require an Encroachment Permit. Additional requirements may arise during the permit process.

NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT AND PUBLIC SCOPING MEETING FOR THE LUNA VALLEY SOLAR PROJECT

FRESNO COUNTY CLERK
By *J. Jansen* DEPUTY

TO: Responsible and Trustee Agencies, other interested agencies, and members of the public
FROM: County of Fresno, Department of Public Works and Planning
Development Services and Capital Projects Division
2220 Tulare Street, Sixth Floor
Fresno, CA 93721
SUBJECT: Notice of Preparation of Draft Environmental Impact Report No. 7813 for the Luna Valley Solar Project
Date: August 28, 2020
Action: The County of Fresno (County) will be the Lead Agency pursuant to the requirements of the California Environmental Quality Act (CEQA), and will be responsible for preparing an Environmental Impact Report (EIR) pursuant to CEQA and the CEQA Guidelines. The EIR will analyze potential impacts of the requested Conditional Use Permit for the Luna Valley Solar Project (EIR #7813).

Project Title: Luna Valley Solar Project, Unclassified Conditional Use Permit Application No. 3671

Project Applicant: Luna Valley Solar I, LLC

Project Summary:

Luna Valley Solar I, LLC (the Applicant) has submitted to the County an Unclassified Conditional Use Permit (CUP) application to construct, operate, and ultimately decommission an approximately 200-megawatt alternating current (MW_{AC}) photovoltaic (PV) energy generation project, energy storage system (ESS), and related facilities and infrastructure, to be known as the Luna Valley Solar Project (Project). The Project would generate and deliver solar-generated power to the California electrical grid via PG&E's existing Tranquillity Switching Station.

The approximately 1,300-acre Project site is on Westlands Water District-owned lands in western Fresno County. It generally is bounded by State Route (SR) 33 (also known as South Derrick Avenue) to the east, West Dinuba Avenue to the south, South Bernardino Avenue to the west, and West South Avenue to the north. West Manning Avenue bisects the Project site from east to west; South Ohio Avenue, which is a private unimproved road, bisects the site from north to south. Access to the site would be provided from South Ohio Avenue. The nearest communities to the Project site include Tranquillity, Mendota, and San Joaquin. Westlands Water District acquired the property as part of a 2002 settlement agreement in the *Sumner Peck Ranch et al. v. Bureau of Reclamation et al.* lawsuit, which prohibits irrigation on subject parcels. The Project site has been dry-farmed for rangeland grasses or lain fallow for at least the past 10 years. A more detailed description is provided below.

The Applicant's Project Description and site plan as well as a location map, are available for review at the following locations:

- Fresno County Public Works and Planning Department, 2220 Tulare Street, Fresno, CA 93721
- Fresno County website: www.co.fresno.ca.us/EIR

Please note that the 2220 Tulare Street office is currently closed to the public and arrangements must be made with Jeremy Shaw (contact info below) to review documents at this address. Documents will also be available on the County's website.

E202010000301

Written Comments:

As required by Section 15082 and CEQA Guidelines, this Notice of Preparation ("NOP") has been prepared and distributed to solicit comments from potential Responsible and Trustee Agencies and other public agencies so that Project-related concerns relevant to each agency's statutory responsibilities in connection with the Project can be addressed in the EIR, as well as any related issues from interested parties other than potential Responsible and Trustee Agencies, including other agencies and affected members of the public. The EIR will be the environmental document of reference for Responsible and Trustee Agencies when considering subsequent discretionary approvals.

The County requests that any potential Responsible or Trustee Agencies responding to this NOP reply in a manner consistent with Section 15082(b) of the CEQA Guidelines, which allows for submittal of any comments in response to this notice no later than 30 days after receipt of the NOP. Comments in response to this NOP will be accepted through 5 p.m., Monday, September 28, 2020. Written comments should be addressed to the person noted below.

Please send your written comments to:

Attn: Jeremy Shaw
Fresno County Department of Public Works and Planning
Development Services and Capital Projects Division
2220 Tulare Street, Sixth Floor
Fresno, CA 93721
Phone: (559) 600-4207 Fax: (559) 600-4200
Email: jshaw@FresnoCountyCA.gov

Please reference EIR #7813, Luna Valley Solar Project. Please include your name, address, and phone number and/or email address so that we may contact you for clarification, if necessary. Comments may also be submitted online at www.co.fresno.ca.us/EIR.

Public Scoping Meeting:

The CEQA process encourages comments and questions from the public throughout the planning process. Consistent with the California Public Resources Code and Section 15083(c)(1), (2)(A) to (D) of the CEQA Guidelines, a Public Scoping Meeting will be held to solicit public and agency comments on the scope and content of the Draft EIR. Oral and/or written comments also may be presented at the Public Scoping Meeting. The Public Scoping Meeting will be held online on:

Date: Thursday, September 10, 2020

Time: 6 p.m.

Link: <http://bit.ly/lunavalley> or call-in: US: 888 788 0099 (Toll Free), Webinar ID: 821 2426 9045

Signature:  Date: 8.26.20

E202010000301

Project Location:

The Project site is located on Westlands Water District-owned lands in unincorporated western Fresno County. It generally is bounded by State Route 33 (SR 33, also known as South Derrick Avenue) to the east, Dinuba Avenue to the south, South Bernardino Avenue to the west and West South Avenue to the north. West Manning Avenue bisects the site from east to west; South Ohio Avenue bisects it from north to south. Site access would be provided from S. Ohio Avenue. The nearest communities to the site include Tranquillity (approximately 9 miles to the east-northeast), Mendota (approximately 10 miles to the north), and San Joaquin (approximately 10 miles to the east). Interstate 5 is approximately 11 miles to the west and south. See Figure 1, *Luna Valley Solar Project Site Location*.

Physical Setting:

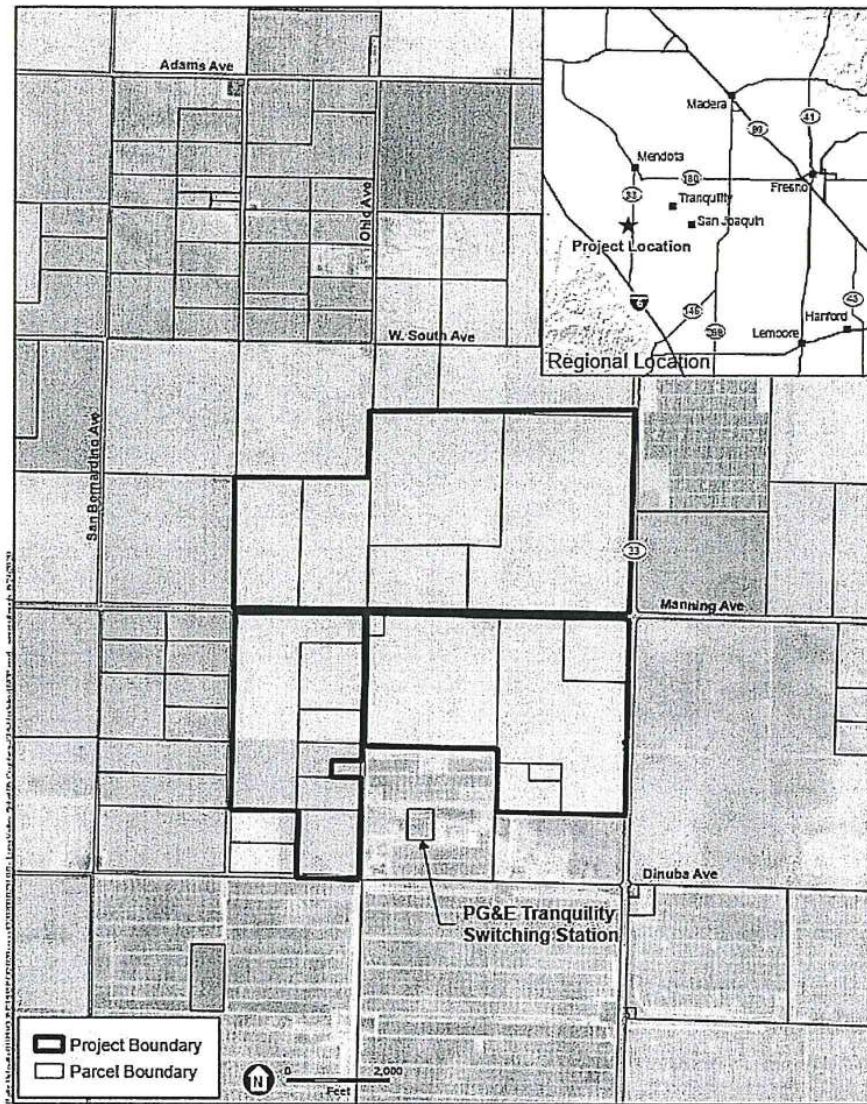

The Project site encompasses 16 parcels currently owned by either the Applicant or the Westlands Water District and is under a purchase option agreement with the Applicant, who would buy the land prior to starting Project construction. The Project site consists of disturbed agricultural land that currently is dry-framed for rangeland grasses or lays fallow. Westlands Water District acquired the property as part of a 2002 settlement agreement in the *Sumner Peck Ranch et al. v. Bureau of Reclamation et al.* lawsuit, which prohibits irrigation. Together with relatively high levels of selenium and a water table that does not provide sufficient drainage for commercially irrigated crops, the non-irrigation covenants restrict what agricultural use may be made of the property. One non-operational well is located on the Project site (parcel 028-60-72ST). Residual subsurface oil pipeline infrastructure associated with Chevron's former pipeline operations in Fresno County also may be present on the Project site. The nearest residences are located approximately 1,500 feet from the southeast corner of the Project site along SR 33.

Existing agricultural uses, including non-irrigated fields owned mostly by the Westlands Water District, generally surround the Project site. Multiple solar energy facilities also are operating or under development in the immediate surrounding area, including the existing Tranquillity Solar Project and proposed Scarlet and Sonrisa solar projects. Interstate 5, the California Aqueduct, the San Joaquin Airport, and Tranquillity, Mendota, and San Joaquin also are located nearby.

Land Use Designation:

The Project site consists of disturbed agricultural land designated as Agriculture in the Fresno County General Plan, and zoned AE-20 (Exclusive Agricultural, 20-acre minimum parcel size) pursuant to the Ordinance Code of the County of Fresno, Zoning Map. The County Code (Section 816.2) permits electric transmission substations and electric distribution stations on parcels zoned Exclusive Agricultural, subject to Director Review and Approval; however, said use is being processed under the more intensive Unclassified Conditional Use Permit application required for solar facilities. The designation protects the general welfare of the agricultural community from encroachments of unrelated agricultural uses that, by their nature, would be injurious to the physical and economic well-being of the agricultural district. Uses in the AE-20 zone district are limited to primarily agricultural uses and other activities compatible with agricultural uses. The Project site consists of approximately 1,300 acres of Farmland of Local Importance as designated by the California Department of Conservation's Farmland Mapping and Monitoring Program. The Project site is not subject to a Williamson Act contract.

E20201000301

Luna Valley Solar Project

Figure 1
Project Location

ESA

Major Components of the Project:

The Project consists of two major components: The Solar Facility and the PG&E infrastructure to interconnect the Project to the grid at the existing Tranquillity Switching Station. The Solar Facility would consist of solar PV modules (or panels) and support structures, and electrical inverters and transformers. Related facilities and infrastructure would include an on-site substation, energy storage system, generation tie (gen-tie) lines, access roads, perimeter fencing, telecommunications infrastructure, a meteorological data collection system, signage, lighting, stormwater facilities, and an operations and maintenance building supported by a septic system and leach field. Water needs could be served via recommencement of use of the existing on-site well or by the

E 202010000301

Westlands Water District. The solar modules at the site would operate during daylight 7 days a week, 365 days a year, and would generate up to 200 MW of alternating current energy at the point of electrical grid interconnection. The Project would include an energy storage system.

To interconnect the Project, PG&E would extend the footprint of its existing Tranquillity Switching Station by approximately 100 feet to the north, and would construct a new, approximately 1,300-foot 230 kV transmission line to connect the existing switching station to a structure to be built within the Project site. This would include approximately four new tubular poles of up-to 140 feet in height. Fiber optic line also would be provided. The fiber optic lines could be co-located on the transmission line poles or could require separate, adjacent poles. Potential environmental impacts of this proposed PG&E infrastructure will be analyzed as part of the Project.

Alternatives to be Analyzed in the EIR:

In accordance with Section 15126.6 of the CEQA Guidelines, the Draft EIR will assess a range of reasonable alternatives to the Project. The range of alternatives to be addressed will include a No Project Alternative as well as other alternatives that would attain most of the basic objectives of the Project while avoiding or reducing any of its significant environmental effects. Potential alternatives will be identified during the coordinated consultation and scoping process.

Potential Environmental Impacts:

Pursuant to CEQA Guidelines Section 15060(d), the County has determined that this Project could result in one or more significant impacts on the physical environmental, thereby necessitating the preparation of an EIR, and so has not prepared an Initial Study.

The EIR will analyze all environmental issues identified in the Environmental Checklist provided in CEQA Guidelines Appendix G (which issues are listed below), after having first established the environmental setting, or baseline, for the environmental analysis. The EIR will identify any potential significant direct, indirect, and cumulative effects of the Project and alternatives related to:

- Aesthetic quality and views, particularly in the vicinity of existing communities;
- Agriculture and forestry resources, including the use of property now in non-irrigated agricultural use to a renewable energy generation use for the duration of the permit term;
- Air quality and noise in the vicinity of sensitive receptors, particularly during construction;
- The intersection of energy use, transportation, and greenhouse gas (GHG) emissions;
- Biological resources, including species and habitats, based on database queries, field surveys, and agency consultations, if required;
- Cultural and tribal cultural resources that could be disturbed during construction, based on record searches and field surveys;
- Geology and soils, paleontological resources, hazards and hazardous materials, hydrology and water quality, and related considerations and constraints;
- The Project's relationship to land use and planning, as well as lands subject to special resources management activities, such as mineral resources and recreation;
- Population and housing, public services, and utilities and service systems;
- Wildfire, including the potential to exacerbate wildfire risks, and thereby expose people to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire; and
- Growth inducement, particularly in relation to existing, adopted development plans for Fresno County.

To Interested Parties [undisclosed recipient list],

On behalf of the Fresno County Department of Public Works and Planning, Development Services and Capital Projects Division (the County), please see the attached Notice of Preparation (NOP) for the Luna Valley Solar Project (Fresno County EIR #7813; SCH #2020080488). If you have any questions about the attached NOP, please contact Jeremy Shaw, Planner, at (559) 600-4207, by email at jshaw@FresnoCountyCA.gov, or by mail using the contact information provided in the attached NOP.

Written scoping input comments will be accepted at any time during the 30-day public scoping period from August 28, 2020 to September 28, 2020. A virtual scoping meeting will be held Thursday, September 10, 2020 at 6 p.m. Instructions for submission of comments and contact information are included in the attached NOP.

You are receiving this email because you have been identified as someone who may be interested in receiving information relating to Fresno County's California Environmental Quality Act (CEQA) process for evaluating environmental impacts of the Luna Valley Solar Project. If you would prefer not to receive email notifications like this one, please reply with the word "unsubscribe" as the body of the message.

Otherwise, please do not reply to this email, which is not regularly monitored. Instead, please direct all communications about this project to the County using the contact information provided in the attached NOP.

Best regards,
Luna Valley Solar Project EIR Team

Notice of Preparation

Public Scoping Meeting

The CEQA process encourages comments and questions from the public throughout the planning process. Consistent with the California Public Resources Code and Section 15083(c)(1), (2)(A) to (D) of the CEQA Guidelines, a Public Scoping Meeting will be held to solicit public and agency comments on the scope and content of the Draft EIR. Oral and/or written comments also may be presented at the Public Scoping Meeting. The Public Scoping Meeting will be held online on:

Date: Thursday, September 10, 2020

Time: 6 p.m.

Link: <http://bit.ly/lunavalley> or call-in: US: 888 788 0099 (Toll Free), Webinar ID: 821 2426 9045

Comments in response to this NOP will be accepted through 5 p.m., Monday, September 28, 2020, and may be submitted by mail or email to the addresses below, or through the Online Comment Card, link also provided below:

Please send your written comments to:

Attn: Jeremy Shaw

Fresno County Department of Public Works and Planning

Development Services and Capital Projects Division

2220 Tulare Street, Sixth Floor

Fresno, CA 93721

LUNA VALLEY COMMENTS

Save Progress

Thank you for taking the time to provide scoping comments on Environmental Impact Report (EIR) No. 7813 - Luna Valley Solar Project. All comments received become part of the public record. The project description and Notice of Preparation can be reviewed at the following website: www.co.fresno.ca.us/EIR

1. What is your name? *

2. Organization/Business

3. Address:

4. Would you like to be added to the mailing list for this project? (Select all which apply)

Note: if you received a copy of the NOP, you are already on the Standard Mail mailing list.

- Yes - By Email
- Yes - By Standard Mail
- No - I would not like to be added to the mailing list.

5. Please provide your email address. If you requested digital notice, this is the address where that notice will be sent.

6. All of the following topics will be considered by the Draft EIR. Please select the areas where you have concerns regarding the potential environmental impacts of this project.

- | | | |
|--|---|--|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agriculture/Forestry | <input type="checkbox"/> Air Quality |
| <input type="checkbox"/> Biological Resources | <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Geology/Soils |
| <input type="checkbox"/> Hazards/Hazardous Materials | <input type="checkbox"/> Land Use/Planning | <input type="checkbox"/> Hydrology/Water Quality |
| <input type="checkbox"/> Mineral Resources | <input type="checkbox"/> Noise | <input type="checkbox"/> Population/Housing |
| <input type="checkbox"/> Public Services | <input type="checkbox"/> Recreation | <input type="checkbox"/> Transportation |
| <input type="checkbox"/> Utilities/Service Systems | <input type="checkbox"/> Greenhouse Gas Emissions | <input type="checkbox"/> Tribal Cultural Resources |

7. Please provide your comments about the project here. Do you have concerns or suggestions? Are there any existing conditions on site or in the vicinity of the project site we should consider in the EIR analysis? If so, please describe them.

8. Mitigation Measures are changes to the design, phasing, or operation of the proposed project that would reduce or avoid environmental impacts. Please suggest Mitigation Measures that could address impacts related to the development and operation of this project.

Thank you for providing your comments on the Luna Valley Solar Project. If you have questions about this project, please contact:

Jeremy Shaw, Planner
Fresno County Department of Public Works and Planning
Development Services and Capital Projects Division

NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT AND PUBLIC SCOPING MEETING FOR THE LUNA VALLEY SOLAR PROJECT

A Public Scoping Meeting will be
SEPTEMBER 10, 2020 AT 6:00 PM

DECLARATION OF PUBLICATION (2015.5 C.C.P.)

MISC. NOTICE

STATE OF CALIFORNIA

COUNTY OF FRESNO

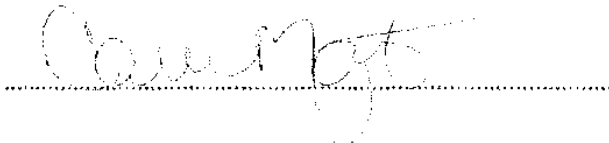

I am a citizen of the United States and a resident of the County aforesaid; I am over the age of eighteen years, and not a party to or interested in the above entitled matter. I am the principal clerk of **THE BUSINESS JOURNAL** published in the city of Fresno, County of Fresno, State of California, Monday, Wednesday, Friday, and which newspaper has been adjudged a newspaper of general circulation by the Superior Court of the County of Fresno, State of California, under the date of March 4, 1911, in Action No. 14315; that the notice of which the annexed is a printed copy, has been published in each regular and entire issue of said newspaper and not in any supplement thereof on the following dates, to wit:

AUGUST 28, 2020

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed at Fresno, California.

AUGUST 28, 2020

ON

NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT AND PUBLIC SCOPING MEETING FOR THE LUNA VALLEY SOLAR PROJECT

TO: Responsible and Trustee Agencies, other interested agencies, and members of the public

FROM: County of Fresno, Department of Public Works and Planning Development Services and Capital Projects Division
2220 Tulare Street, Sixth Floor
Fresno, CA 93721

SUBJECT: Notice of Preparation of Draft Environmental Impact Report No. 7813 for the Luna Valley Solar Project

Date: August 28, 2020

Action: The County of Fresno (County) will be the Lead Agency pursuant to the requirements of the California Environmental Quality Act (CEQA), and will be responsible for preparing an Environmental Impact Report (EIR) pursuant to CEQA and the CEQA Guidelines. The EIR will analyze potential impacts of the requested Conditional Use Permit for the Luna Valley Solar Project (EIR #7813).

Project Title: Luna Valley Solar Project, Unclassified Conditional Use Permit Application No. 3671

Project Applicant: Luna Valley Solar I, LLC

Project Summary:

Luna Valley Solar I, LLC (the Applicant) has submitted to the County an Unclassified Conditional Use Permit (CUP) application to construct, operate, and ultimately decommission an approximately 200-megawatt alternating current (MWac) photovoltaic (PV) energy generation project, energy storage system (ESS), and related facilities and infrastructure, to be known as the Luna Valley Solar Project (Project). The Project would generate and deliver solar-generated power to the California electrical grid via PG&E's existing Tranquillity Switching Station.

The approximately 1,300-acre Project site is on Westlands Water District-owned lands in western Fresno County. It generally is bounded by State Route 33 (SR 33, also known as South Derrick Avenue) to the east, West Dinuba Avenue to the south, South Bernardino Avenue to the west, and West South Avenue to the north. West Manning Avenue bisects the Project site from east to west; South Ohio Avenue bisects it from north to south. Access to the site would be provided from South Ohio Avenue. The nearest communities to the Project site include Tranquillity, Mendota, and San Joaquin. Westlands Water District acquired the property as part of a 2002 settlement agreement in the *Summer Peck Ranch et al. v. Bureau of Reclamation et al.* lawsuit, which prohibits irrigation on subject parcels. The Project site has been dry-farmed for rangeland grasses or lain fallow for at least the past 10 years. A more detailed description is provided below. The Applicant's Project Description and site plan as well as a location map, are available for review at the following locations:

§ Fresno County Public Works and Planning Department, 2220 Tulare Street, Fresno, CA 93721

§ Fresno County website: <http://www.co.fresno.ca.us/viewdocument.aspx?id=74176>

Please note that the 2220 Tulare Street office is currently closed to the public and arrangements must be made with Jeremy Shaw (contact info below) to review documents at this address. Document will also be updated on the County's website.

Written Comments:

As required by Section 15082 and CEQA Guidelines, this Notice of Preparation ("NOP") has been prepared and distributed to solicit comments from potential Responsible and Trustee Agencies and other public agencies so that Project-related concerns relevant to each agency's statutory responsibilities in connection

with the Project can be addressed in the EIR, as well as any related issues from interested parties other than potential Responsible and Trustee Agencies, including other agencies and affected members of the public. The EIR will be the environmental document of reference for Responsible and Trustee Agencies when considering subsequent discretionary approvals.

The County requests that any potential Responsible or Trustee Agencies responding to this NOP reply in a manner consistent with Section 15082(b) of the CEQA Guidelines, which allows for submittal of any comments in response to this notice no later than 30 days after receipt of the NOP. Comments in response to this NOP will be accepted through 5 p.m., Monday, September 28, 2020. Written comments should be addressed to the person noted below.

Please send your written comments to:
Attn: Jeremy Shaw
Fresno County Department of Public Works and Planning
Development Services and Capital Projects Division
2220 Tulare Street, Sixth Floor
Fresno, CA 93721
Phone: (559) 600-4207 Fax: (559) 600-4200

Email: jshaw@FresnoCountyCA.gov
Please reference EIR #7813, Luna Valley Solar Project. Please include your name, address, and phone number and/or email address so that we may contact you for clarification, if necessary.

Public Scoping Meeting:

The CEQA process encourages comments and questions from the public throughout the planning process. Consistent with the California Public Resources Code and Section 15083(c)(1), (2)(A) to (D) of the CEQA Guidelines, a Public Scoping Meeting will be held to solicit public and agency comments on the scope and content of the Draft EIR. Oral and/or written comments also may be presented at the Public Scoping Meeting. The Public Scoping Meeting will be held online on:

Date: Thursday, September 10, 2020
Time: 6 p.m.

Link: <http://bit.ly/lunavalley> or call in: US: 888 788 0099 (Toll Free), Webinar ID: 821 2426 9045

Potential Environmental Impacts:

Pursuant to CEQA Guidelines Section 15060(d), the County has determined

that this Project could result in one or more significant impacts on the physical environmental, thereby necessitating the preparation of an EIR, and so has not prepared an Initial Study.

The EIR will analyze all environmental issues identified in the Environmental Checklist provided in CEQA Guidelines Appendix G (which issues are listed below), after having first established the environmental setting, or baseline, for the environmental analysis. The EIR will identify any potential significant direct, indirect, and cumulative effects of the Project and alternatives related to:

- Aesthetic quality and views, particularly in the vicinity of existing communities;
- Agriculture and forestry resources, including the use of property now in non-irrigated agricultural use to a renewable energy generation use for the duration of the permit term;
- Air quality and noise in the vicinity of sensitive receptors, particularly during construction;
- The intersection of energy use, transportation, and greenhouse gas (GHG) emissions;
- Biological resources, including species and habitats, based on database queries, field surveys, and agency consultations, if required;
- Cultural and tribal cultural resources that could be disturbed during construction, based on record searches and field surveys;
- Geology and soils, paleontological resources, hazards and hazardous materials, hydrology and water quality, and related considerations and constraints;
- The Project's relationship to land use and planning, as well as lands subject to special resources management activities, such as mineral resources and recreation;
- Population and housing, public services, and utilities and service systems;
- Wildfire, including the potential to exacerbate wildfire risks, and thereby expose people to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire; and
- Growth inducement, particularly in relation to existing, adopted development plans for Fresno County.

Public Scoping Meeting Presentation

This page intentionally left blank

Luna Valley Solar Project EIR

Public Scoping Meeting | Thursday, September 10, 2020, 6 p.m.

Agency Presentation and Public Input

Purpose of the Meeting

For us to hear from YOU!
Your questions and ideas are welcome and invited.

Agenda

- Introductions
- Purpose of the Meeting
- Project Overview
- Unclassified Conditional Use Permit Process
- Environmental Review Process (CEQA)
- Scoping: Environmental Impacts and Alternatives
- Public Comments
- Next Steps

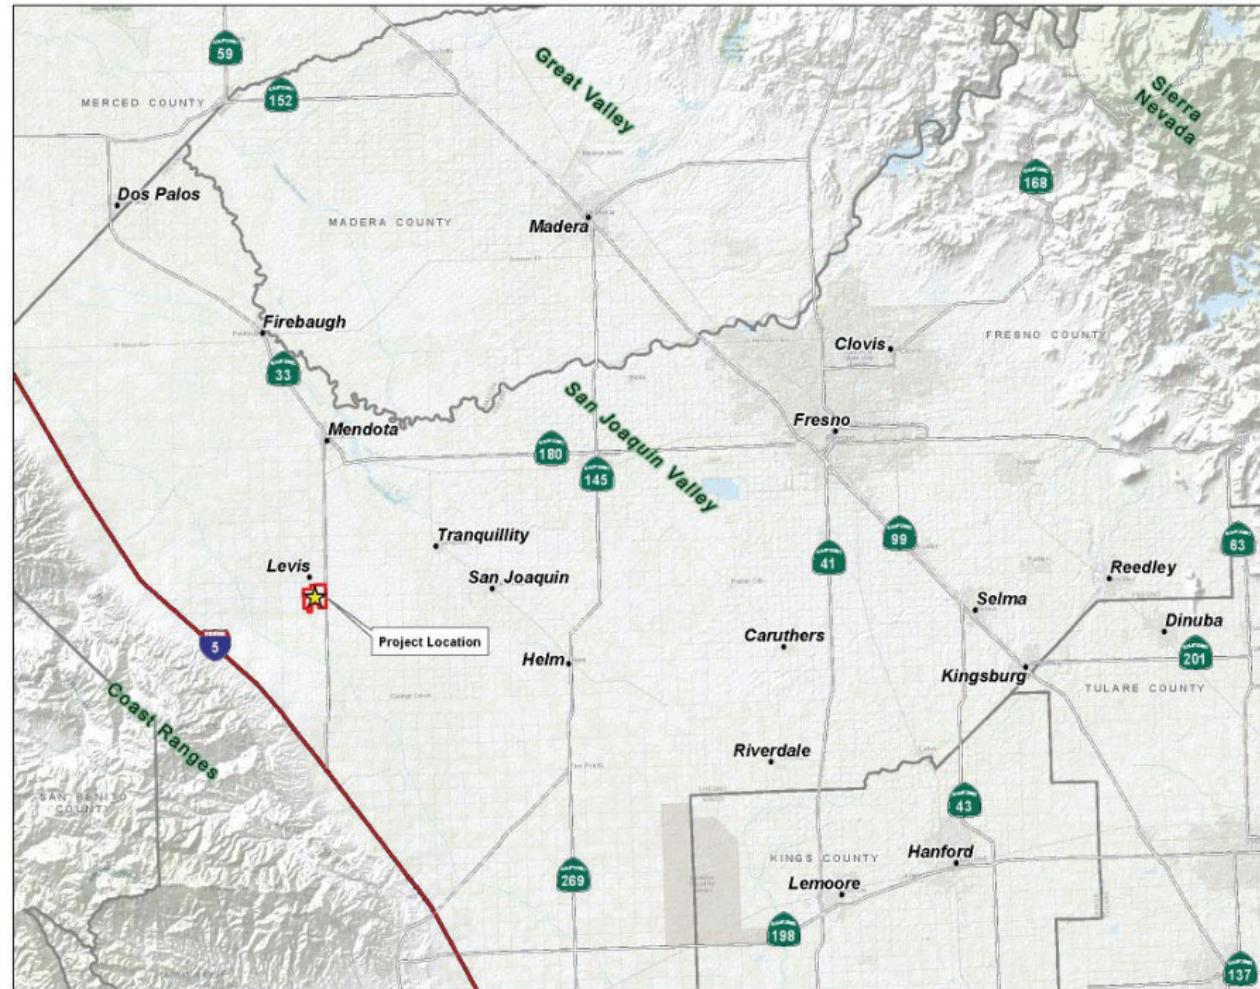

Introductions

- Fresno County
 - Department of Public Works and Planning,
Development Services and Capital Projects Division
Jeremy Shaw, Planner, jshaw@FresnoCountyCA.gov
 - CEQA Lead Agency responsible for preparation of EIR 7813
 - Decision-maker for the requested Conditional Use Permit No. 3671
- Environmental Science Associates
 - Environmental Consultant to the County
- Luna Valley Solar I, LLC
 - Project Applicant

Project Vicinity

Closest cities:

- Tranquillity
9 miles east-northeast
- Mendota
10 miles north
- San Joaquin
10 miles east

Luna Valley Solar Project (EIR 7813)

Surrounding Uses

- Flat agricultural land owned by Westlands Water District
- Adjacent to solar projects
- Adjacent to existing PG&E substation
- Within area of existing agricultural activities

Luna Valley Solar Project (EIR 7813)

Project Details

- Solar Array
- Inverters and Switchgears
- Substation
- O&M Building
- Gen-tie line
- Supervisory Control & Data Acquisition (SCADA) System
- Access Roads
- Perimeter Fencing
- Lighting
- O&M Building
- Battery Energy Storage System

Luna Valley Solar Project (EIR 7813)

Land Use and Permitting Process

- **Conditional Use Permit (CUP) Process**

- Application
- Agency Review
- CEQA Completion
- Planning Commission
- (Appeal only) Board of Supervisors.

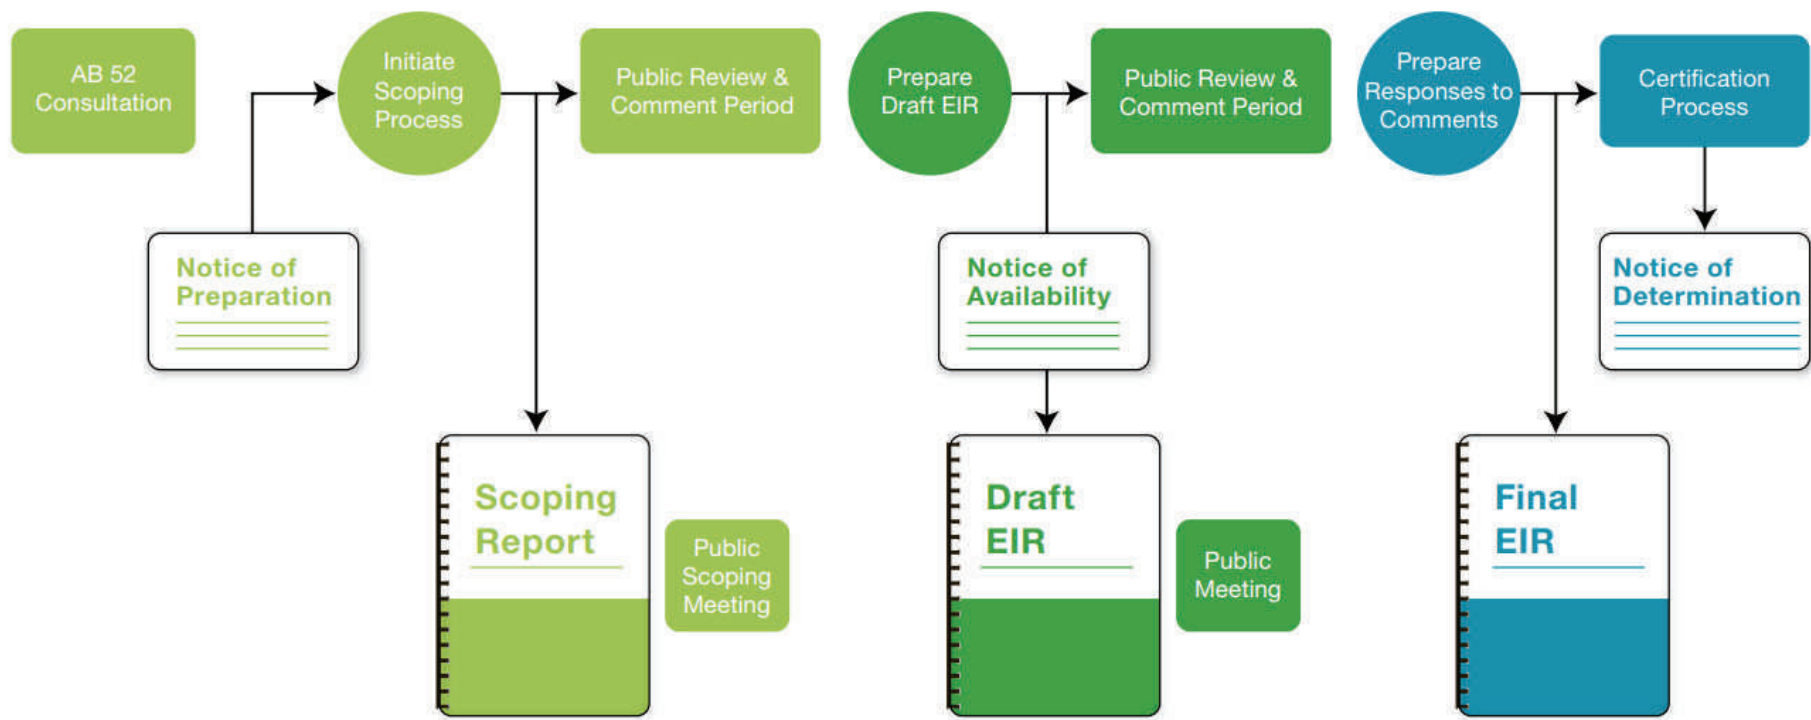

- The Planning Commission acts on the CUP and EIR at the same time and the EIR must be adopted if the CUP is approved.

Land Use and Permitting Process

County staff makes a recommendation to the Commission to approve or deny based on five findings:

1. Adequate size and shape of parcel
2. Adequate roads to the project site
3. No adverse impacts on surrounding property
4. Consistency with the General Plan
5. Required Conditions are necessary to ensure public safety and welfare

Environmental Review: The CEQA Process

Luna Valley Solar Project (EIR 7813)

County Consultation with Tribes

Invited

Accepted

In Progress

Scoping

August 28 – September 28, 2020 at 5 p.m.

Purpose of Scoping

- Solicit input as to the scope and content of the EIR, including potential impacts of concern and mitigation measures or alternatives that should be considered;
- Scoping tells us what we should study, not what the answers are.

Agency Scoping

Public Scoping

Luna Valley Solar Project (EIR 7813)

Scoping

Resources to be Evaluated:

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality and Greenhouse Gas Emissions
- Biological Resources
- Cultural and Tribal Cultural Resources
- Energy
- Geology, Soils, and Paleontology
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation
- Utilities and Service Systems
- Wildfire

Luna Valley Solar Project (EIR 7813)

Scoping: Potential Alternatives

- Project Alternatives
 - Reasonable or feasible alternatives to the proposed project or its location
 - Capable of avoiding or substantially lessening any significant project impacts
 - Ok to impede to some degree the attainment of the objectives or be costlier
- No Project Alternative
 - What would be reasonably expected to occur in the foreseeable future if the proposed project were not approved
 - Based on current plans, consistent with available infrastructure and services

Scoping: Potential Alternatives

Reasonable

- The range of alternatives required in an EIR is governed by a “rule of reason” that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project.

Feasible

- Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, and whether the proponent can reasonably acquire, control or otherwise have access to an alternative site (or the site is already owned by the proponent)

Scoping: Potential Alternatives

Proposed Project

- Conditional Use Permit 3671
- 200 MW of solar energy generated on approximately 1,300 acres of previously disturbed and irrigation-prohibited land
- Energy Storage System

No Project Alternative

- No Use Permit
- No utility-scale PV solar energy project on the proposed site
- Continued dry-farmed or fallowed land
- Potential for other uses consistent with the General Plan and zoning ordinance

Potential Alternatives

- Reasonable
- Feasible
- Capable of avoiding or substantially lessening significant project impacts

Luna Valley Solar Project (EIR 7813)

Public Participation Opportunities

Participate at this evening's meeting

Submit written comments before 5 p.m. September 28, 2020

Stay informed

Request to receive project notices (via US Post, email or both) from Jeremy Shaw: jshaw@fresnocountyca.gov

Keep an eye on the project website: www.co.fresno.ca.us/EIR

Provide comments on the Draft EIR

Participate in public hearings on the project

For Today

1. One speaker at a time
2. State and spell your name clearly
3. Limit comments to 3 minutes
4. Respect others' opinions
5. Written comments encouraged

Para Hoy

1. Un orador a la vez
2. Pronuncie y deletree claramente su nombre
3. Limite los comentarios a 3 minutos
4. Respete las opiniones de los demás
5. Se recomiendan los comentarios escritos

Scoping Process Participation Guide

1 **LUNA VALLEY SOLAR PROJECT**
2 **Public Scoping Meeting Transcript**
3 **September 10, 2020**

4 **Danaka DeBow (ESA)**

5 Welcome! Alright, we're going to get started in a few minutes.

6 Hello and welcome. Thank you for joining us tonight for the Luna Valley Solar Project scoping
7 meeting. We'll get started in just a few minutes while we wait for a few more people to arrive.

8 Thank you for those of you who have joined us already tonight for the Luna Valley Solar Project
9 scoping meeting. We're just going to wait another two or so minutes to get started. While we wait
10 for others to arrive.

11 Alright. Well, again, welcome to the Luna Valley Solar Project scoping meeting for those that
12 you have joined. Note that you are automatically muted and only those on the scoping meeting
13 panel are visible to the other participants. In just a minute we'll have Jeremy Shaw, Fresno
14 County lead planner for this project, walk us through the agenda and provide introductions. First
15 though, we want to let everyone know that after the background material has been presented,
16 there will be an opportunity for you to provide your input. At that point you can participate by
17 either writing your comments, using the Q and A feature found at the bottom of your screen. Or if
18 you'd like, you can speak your comment. To do this, please use the "raise your hand" feature also
19 at the bottom of your screen. We will call upon you, and our producers will unmute you, and then
20 you'll be able to see that. There will be more specific instructions offered when we get to that
21 point, but I want to make everyone aware that there will be that opportunity. So Jeremy, would
22 you like to get started.

23 **Jeremy Shaw (Fresno County)**

24 Yep, thank you. Good evening, I'm Jeremy Shaw with the County of Fresno. And thank you for
25 joining us for this scoping meeting. This evening we will be introducing you to key parties
26 associated with this project. The purpose of this meeting is to provide you with an opportunity to
27 comment on the scope of the environmental review for the project. We will provide a brief
28 description of the conditional use permit process, the environmental review process, and the
29 scoping process, after which we will open the floor for your comments and questions. Any
30 comments made in this meeting will become part of the public record.

1 My contact information is on the screen and will also be available on the County website under
2 this link under the link for this project, which will be provided later during this presentation. Our
3 consultant for this project is ESA, Environmental Science Associates, represented here by Janna
4 Scott. And the applicant for this project is Clearway Energy, represented here by James Kelly,
5 who will be providing you with a brief summary of the project.

6 Thank you again for joining us and we look forward to your comments and questions after the
7 presentations. I will go ahead and turn the meeting over to James.

8 **James Kelly (Clearway Energy)**

9 Thank you. Good evening. My name is James Kelly and I'm a Senior Director of Development
10 with Clearway Energy. Clearway is one of the largest developers and operators of clean energy in
11 the US and we'll be responsible for leading development of the new Luna Valley Solar Project,
12 which we're describing here tonight.

13 The Luna Valley Solar Project consists of constructing and operating a photovoltaic solar
14 electricity generating facility and energy storage system that will produced up to 200 megawatts
15 of alternating current energy at the point of electrical grid interconnection.

16 The 1300 acre site is located in the Central Valley region in the western area of Fresno County.
17 The City of Tranquillity is located approximately nine miles east northeast of the site and the
18 cities of Mendota and San Joaquin are located approximately 10 miles north and east,
19 respectively. Interstate 5 is parallel to the east, the California aqueduct is approximately 11 miles
20 to the west, as well as to the south of the project area.

21 More specifically, the project site is generally down Highway 33 (South Derek Avenue), South
22 San Bernardino Avenue, West South Avenue, and West Dinuba Avenue. West Manning Avenue
23 cuts through the middle of the project area from east to west and South Ohio Avenue cuts through
24 the approximate middle of the project area from the north-south.

25 The project is located on generally flat agricultural land owned by the Westlands Water District.
26 The project parcels have historically to use for non-irrigated dry farming of crops such as wheat
27 and alfalfa. Similar to the adjacent lands on which solar projects are currently operating,
28 Westlands acquired this property as part of the 2002 settlement agreement reached with the
29 federal government. The site is located next to other solar energy generation facilities, including
30 the Tranquillity Solar Project and the Adams East Solar Project. The existing Pacific Gas and
31 Electric Tranquillity Substation is located immediately adjacent to the project site and few
32 residences exist in the general vicinity.

33 As noted previously, the project would generate 200 megawatts AC at the point of
34 interconnection. The project would include a solar energy generating facility, direct current
35 electricity to alternating current electricity power inverters and transformers or power
36 conditioning stations, a project on-site substation, battery energy storage, and an above-ground
37 connection to the PG&E-owned Tranquillity Substation.

1 The solar facility would consist of PV solar modules arranged into arrays, supported by a racking
2 system and tracker units that track the sun. The trackers are organized in rows in a uniform grid
3 pattern or solar array. The proposed project would have multiple solar arrays interconnected to
4 form a utility-scale PV system.

5 The PV solar modules will be constructed of glass encasing crystalline silicon, poly crystalline
6 silicon, or thin-film technology, and will be dark blue, almost black in color. The plant will be
7 designed in accordance with local and state codes and regulations.

8 Individual PV tracker panels would be connected together in a series to create a string of trackers
9 carrying direct current electricity using a combiner box. Inverters in the power conditioning
10 stations convert the DC electricity produced by the tractors to AC electricity, the PCS
11 transformers then step-up the AC electricity to the appropriate collection level voltage. Energy
12 from the project solar arrays will be collected at the project substation and then transmitted to the
13 PG&E-owned Tranquillity Substation via an above-ground PG&E transmission line. To
14 interconnect the solar project, PG&E would extend the footprint of the existing Tranquillity
15 Switching Station north by about 100 feet and construct a new 230 kilovolt transmission line that
16 would extend from the Tranquillity Switching Station to a structure located on the solar project
17 property. Up to four new steel poles approximately 100 feet in height would be required.

18 Another key component of this project is the battery storage. Up to four acres of the project will
19 consist of batteries, which will allow energy to be stored during the day and then reliably
20 delivered to the grid during the evening or during times of peak energy demand. The battery
21 energy storage is expected to be either located adjacent to the substation or distributed throughout
22 the solar array at the inverter equipment pads or tracker rows. If batteries are located adjacent to
23 the substation, they would be contained within steel enclosures similar to a refrigerator-sized
24 cabinet. If distributed throughout the solar array, the energy storage system would likely be
25 contained within metal housings and electrically connected to the inverters at each of the
26 equipment pads.

27 Access to the project area would be through main entrances along West Manning Avenue and
28 Highway 33. Operations and maintenance activities would take place in a new operations and
29 maintenance building.

30 Currently we anticipate construction of the project to begin in 2022 and the facility to begin
31 operations in 2023.

32 **Jeremy Shaw (Fresno County)**

33 Good evening. Again, I'm Jeremy Shaw with the County.

34 A little bit about the conditional use permit process. This CUP application process is the request
35 from the applicant for permission to operate the solar facility. The CUP process occurs in parallel
36 to the environmental impact report (the EIR). While the consultant prepares the EIR, staff
37 considers the project's ability to make the five necessary findings for approving a conditional use

1 permit. Upon publication of the final environmental impact report, the project is scheduled for a
2 hearing before the planning commission.

3 If it's determined that those findings can be made, staff will recommend approval of the
4 conditional use permit to the planning commission at the same hearing were adoption of the EIR
5 is proposed.

6 The five necessarily findings are:

- 7 • That there is enough space on the subject parcel for the proposal to occur
- 8 • That the roads which serve the project site are wide enough and strong enough to support the
9 traffic generated by the project
- 10 • That the project will not have a significant impact on surrounding properties
- 11 • That the project is consistent with the policies of the Fresno County General Plan and
- 12 • Finally, that the conditions placed upon the project are necessary in order to protect the public
13 health safety in general welfare.

14 A summary of Staff's recommendation we will be provided on our website at least 10 days prior
15 to the public hearing. At the Planning Commission, concerns which relate to the operation of the
16 project, rather than the environmental impacts, may be sent to my attention and will be included
17 in this report to the planning commission.

18 I will now turn it over to Janna at ESA to discuss the process.

19 **Janna Scott (ESA)**

20 Good evening. My name is Janna Scott. I'm a director with Environmental Science Associates,
21 consultant to Fresno County for this project.

22 The County is conducting its environmental evaluation in accordance with both the California
23 Environmental Quality Act (or CEQA) and its own environmental rules for the consideration of
24 solar projects.

25 CEQA applies to most public agency decisions to authorize or approve activities that could have
26 a significant adverse impact on the environment. It requires agencies to do four things:

- 27 • To be informed about the potential environmental consequences of their decisions
- 28 • To consider all relevant information before taking action
- 29 • To provide the public with an opportunity to comment on the environmental issues, and
30 finally
- 31 • to avoid or reduce significant effects whenever it is feasible to do so.

32 The CEQA process consists of three main stages. The first stage, shown here in lime green, is the
33 scoping process. This is where we are now right at the beginning. Will take the information

1 learned during the scoping process and apply it during the second stage, shown here in darker
2 green: preparation of the Draft EIR. During the third stage, shown here in blue, the County will
3 invite agency and public comments on the Draft EIR, respond to those comments, and then issue
4 the Final EIR for consideration by the Planning Commission as part of its decision making
5 process for the project as a whole.

6 Among the very first steps in the scoping process, the County consults with California Native
7 American tribes. For this project, the County invited four Tribes to consult back in March. One
8 tribe, the Santa Rosa Rancheria, accepted the invitation. Further discussions are planned.

9 The scoping period opened on August 28. On that date, the notice of preparation was filed with
10 the State Clearinghouse, posted with the County Clerk, published in The Business Journal, posted
11 on the County's website, and also mailed to agencies, interested parties, and property owners
12 within one mile of the project site. The scoping period closes on September 28 at 5pm.

13 During this scoping period, the County will solicit input as to the scope and content of the EIR,
14 including potential impacts of concern and mitigation measures or alternatives that should be
15 considered. Scoping tells us what we should study, not what the answers are. During scoping the
16 County also will seek input from other public agencies that might have permitting authority over
17 the project or jurisdiction over a specific resource, like the California Department of Fish and
18 Wildlife has jurisdiction over species. They also, of course, seek input from you, members of the
19 public.

20 The EIR will evaluate whether the project could negatively affect any of 19 environmental
21 resource areas, all of which are identified in CEQA. At this beginning stage of the CEQA
22 process, the actual environmental impacts of the project are unknown. We will determine what
23 they are based in part on your input during the development of the EIR. Again, we will be
24 evaluating all 19 resource areas. However, part of our task during scoping is to hear from you
25 about which specific impacts merit particular focus. The more specific you can be about your
26 interest in concerns the more helpful your input will be to the County as we develop the EIR.

27 The EIR also will consider potential impacts of alternatives to the project and whether such
28 alternatives to the project could accomplish most of the basic objectives of the project, while
29 avoiding or reducing potential significant effects. To be evaluated in detail, a potential alternative
30 must be reasonable, feasible, capable of avoiding or substantially lessening significant impact. It's
31 okay if a potential alternative impedes to some degree the attainment of the objectives or would
32 be more expensive to implement. Also as part of the alternatives analysis, the County will
33 consider what happens if the project is not approved... In other words, a "no project" alternative.

34 Two definitions are important here: reasonable and feasible. The range of alternatives required in
35 an EIR is governed by what's called a rule of reason. This requires the EIR to set forth only those
36 alternatives that are necessary to present a reasoned choice. They're limited to ones that would
37 avoid or substantially lessen the significant effects of the project. Among the factors that may be
38 taken into account when addressing the feasibility of alternatives, are site suitability, economic
39 viability, the availability of infrastructure, general plan consistency, consistency with other plans

1 or regulatory limitations, and whether the project proponent or applicant can reasonably acquire,
2 control or otherwise have access to an alternative site.

3 The EIR will compare impacts anticipated to result from the proposed project and alternatives to
4 the project. Here, the project consists of issuing a conditional use permit, the 200 megawatts of
5 solar energy that James described generated on approximately 1300 acres, and the energy storage
6 system, and other components described earlier. The “no project” scenario involves no issuance
7 of a CUP; no construction, operation maintenance or eventually decommissioning of a utility-
8 scale photovoltaic solar energy project on the site; and instead the site would continue to be dry
9 farmed, or else left fallow. Other uses that would be consistent with the general plan or zoning
10 ordinance as they exist right now also could occur.

11 So enough about that. Let's hear from you. Here are the ways in which you can participate in the
12 CEQA process. For this project, you can participate in this evening's meeting, you can submit
13 comments before 5pm on September 28, you can stay informed by requesting to receive project
14 notices either in the mail or by email or both (and if you'd like to do that, please email Jeremy).
15 You can also keep an eye on the project website. The County will keep notices and relevant
16 documents posted there. Once the Draft EIR is issued, you can provide comments on it at that
17 time and at the right stage in the process. You also can participate in public hearings on the
18 project.

19 **Danaka DeBow (ESA)**

20 Now are ready to hear from you. Tonight, you can either type or come to the screen. I'll read them
21 out loud, or you can raise your hand so we'll call on you, or the producer will, and you can speak
22 your comment out loud. Some rules to remember: There will be one speaker [at a time]. When
23 you speak, please limit comments [to three minutes]. At the end of this session, you can... And
24 we will continue to provide additional comments, of course. Everyone respect each other's
25 opinions. And again, written [comments] will be read out loud. I'll start with anyone who wants to
26 raise [their hand].

27 **Larry Kass (ESA, interprete)**

28 Si quieren participar, algunas reglas para recordar:

29 Un orador a la vez. Pronuncie y deletree claramente su nombre. Limite los comentarios a 3
30 minutos. Respete las opiniones de los demás, y, se recomiendan los comentarios escritos.

31 **Janna Scott (ESA)**

32 Do you see any hands raised? Okay. We will be here until seven o'clock. If you want to think
33 about your comments, feel free to raise your hand, whenever you like, between now and seven
34 o'clock. Or, if you prefer, you can send your comments in by email or the electronic comment
35 form that's available on the County's website. You can see all of those ways to access project
36 information up on the site.

- 1 Thanks for participating this evening. Once this evening's meeting concludes, here's what
- 2 happens next: We will be preparing the Draft EIR this winter and into the spring, toward issuance
- 3 of the draft for agency and public review in spring of next year. During summer and fall, we will
- 4 be providing an opportunity for agencies and members of the public to review the draft and
- 5 provide comments will be responding to those comments and then issuing the Final EIR for
- 6 consideration by the Planning Commission next Fall.

- 7 Again here ways to participate and we will be here until seven o'clock. Thanks everybody.

Project Title: EIR 7813/ CUP 3671 Luna Valley Solar Project - SCH # 2020080488

Public Resources Code (PRC) § 3208.1 establishes well reabandonment responsibility when a previously plugged and abandoned well will be impacted by planned property development or construction activities. Local permitting agencies, property owners, and/or developers should be aware of, and fully understand, that significant and potentially dangerous issues may be associated with development near oil, gas, and geothermal wells.

The Division of Oil, Gas, and Geothermal Resources (Division) has received and reviewed the above referenced project dated 8/31/2020. To assist local permitting agencies, property owners, and developers in making wise land use decisions regarding potential development near oil, gas, or geothermal wells, the Division provides the following well evaluation.

The project is located in Fresno County, within the boundaries of the following fields:

Any Field

In addition to the plugged & abandoned well, there might be pipelines associated to oil and gas production.

Our records indicate there are 1 known oil or gas wells located within the project boundary as identified in the application.

- Number of wells Not Abandoned to Current Division Requirements as Prescribed by Law and Projected to Be Built Over or Have Future Access Impeded by this project: 1
- Number of wells Not Abandoned to Current Division Requirements as Prescribed by Law and Not Projected to Be Built Over or Have Future Access Impeded by this project: 0
- Number of wells Abandoned to Current Division Requirements as Prescribed by Law and

California
Department of Conservation
Geologic Energy Management Division

Gavin Newsom, Governor

Sacramento, CA 95814
T: (916) 445-9686

Projected to Be Built Over or Have Future Access Impeded by this project: 0

- Number of wells Abandoned to Current Division Requirements as Prescribed by Law and Not Projected to Be Built Over or Have Future Access Impeded by this project: 0

The Division categorically advises against building over, or in any way impeding access to, oil, gas, or geothermal wells. Impeding access to a well could result in the need to remove any structure or obstacle that prevents or impedes access including, but not limited to, buildings, housing, fencing, landscaping, trees, pools, patios, sidewalks, roadways, and decking. Maintaining sufficient access is considered the ability for a well servicing unit and associated necessary equipment to reach a well from a public street or access way, solely over the parcel on which the well is located. A well servicing unit, and any necessary equipment, should be able to pass unimpeded along and over the route, and should be able to access the well without disturbing the integrity of surrounding infrastructure.

There are no guarantees a well abandoned in compliance with current Division requirements as prescribed by law will not start leaking in the future. It always remains a possibility that any well may start to leak oil, gas, and/or water after abandonment, no matter how thoroughly the well was plugged and abandoned. The Division acknowledges wells plugged and abandoned to the most current Division requirements as prescribed by law have a lower probability of leaking in the future, however there is no guarantees that such abandonments will not leak.

The Division advises that all wells identified on the development parcel prior to, or during, development activities be tested for liquid and gas leakage. Surveyed locations should be provided to the Division in Latitude and Longitude, NAD 83 decimal format. The Division expects any wells found leaking to be reported to it immediately.

Failure to plug and reabandon the well may result in enforcement action, including an order to perform reabandonment well work, pursuant to PRC § 3208.1, and 3224.

PRC § 3208.1 give the Division the authority to order or permit the re-abandonment of any well where it has reason to question the integrity of the previous abandonment, or if the well is not accessible or visible. Responsibility for re-abandonment costs may be affected by the choices made by the local permitting agency, property owner, and/or developer in considering the general advice set forth in this letter. The PRC continues to define the person or entity responsible for reabandonment as:

1. The property owner - If the well was plugged and abandoned in conformance with Division requirements at the time of abandonment, and in its current condition does not pose an immediate danger to life, health, and property, but requires additional work solely because the owner of the property on which the well is located proposes construction on the property that would prevent or impede access to the well for purposes of remedying a currently perceived future problem, then the owner of the property on which the well is located shall obtain all rights necessary to reabandon the well and be responsible for the reabandonment.

California
Department of Conservation
Geologic Energy Management Division

Gavin Newsom, Governor
David Shabazian, Director
801 K Street, MS 18-05
Sacramento, CA 95814
T: (916) 445-9686

2. The person or entity causing construction over or near the well - If the well was plugged and abandoned in conformance with Division requirements at the time of plugging and abandonment, and the property owner, developer, or local agency permitting the construction failed either to obtain an opinion from the supervisor or district deputy as to whether the previously abandoned well is required to be reabandoned, or to follow the advice of the supervisor or district deputy not to undertake the construction, then the person or entity causing the construction over or near the well shall obtain all rights necessary to reabandon the well and be responsible for the reabandonment.

3. The party or parties responsible for disturbing the integrity of the abandonment - If the well was plugged and abandoned in conformance with Division requirements at the time of plugging and abandonment, and after that time someone other than the operator or an affiliate of the operator disturbed the integrity of the abandonment in the course of developing the property, then the party or parties responsible for disturbing the integrity of the abandonment shall be responsible for the reabandonment.

No well work may be performed on any oil, gas, or geothermal well without written approval from the Division. Well work requiring approval includes, but is not limited to, mitigating leaking gas or other fluids from abandoned wells, modifications to well casings, and/or any other re-abandonment work. The Division also regulates the top of a plugged and abandoned well's minimum and maximum depth below final grade. CCR §1723.5 states well casings shall be cut off at least 5 feet but no more than 10 feet below grade. If any well needs to be lowered or raised (i.e. casing cut down or casing riser added) to meet this regulation, a permit from the Division is required before work can start.

The Division makes the following additional recommendations to the local permitting agency, property owner, and developer:

1. To ensure that present and future property owners are aware of (a) the existence of all wells located on the property, and (b) potentially significant issues associated with any improvements near oil or gas wells, the Division recommends that information regarding the above identified well(s), and any other pertinent information obtained after the issuance of this letter, be communicated to the appropriate county recorder for inclusion in the title information of the subject real property.

2. The Division recommends that any soil containing hydrocarbons be disposed of in accordance with local, state, and federal laws. Please notify the appropriate authorities if soil containing significant amounts of hydrocarbons is discovered during development.

As indicated in PRC § 3106, the Division has statutory authority over the drilling, operation,

maintenance, and abandonment of oil, gas, and geothermal wells, and attendant facilities, to prevent, as far as possible, damage to life, health, property, and natural resources; damage to underground oil, gas, and geothermal deposits; and damage to underground and surface waters suitable for irrigation or domestic purposes. In addition to the Division's authority to order work on wells pursuant to PRC §§ 3208.1 and 3224, it has authority to issue civil and criminal penalties under PRC §§ 3236, 3236.5, and 3359 for violations within the Division's jurisdictional authority. The Division does not regulate grading, excavations, or other land use issues.

If during development activities, any wells are encountered that were not part of this review, the property owner is expected to immediately notify the Division's construction site well review engineer in the Inland district office, and file for Division review an amended site plan with well casing diagrams. The District office will send a follow-up well evaluation letter to the property owner and local permitting agency.

Should you have any questions, please contact me at (661) 326-6016 or via email at Victor.Medrano@conservation.ca.gov

Mr. Jeremy Shaw
Fresno County
Department of Public Works and Planning
2220 Tulare Street, Sixth Floor
Fresno, California 93721
jshaw@FresnoCountyCA.gov

Dear Mr. Shaw:

We are responding to your August 28, 2020, request for comments on the Luna Valley Solar Project. This project is identified by your office as an Unclassified Conditional Use Permit Application Number 3671. The approximately 1,300.0-acre project site is located west of State Route 33 and north of West Dinuba Avenue. This project is located in Sections 23-26, Township 15 South, Range 14 East, MDB&M, Latitude 36.60067°, Longitude -120.41083°, near San Joaquin, Fresno County, California.

The Corps of Engineers' jurisdiction within the study area is under the authority of Section 404 of the Clean Water Act for the discharge of dredged or fill material into waters of the United States. Waters of the United States include, but are not limited to, rivers, perennial or intermittent streams, lakes, ponds, wetlands, vernal pools, marshes, wet meadows, some canals, and seeps. Project features that result in the discharge of dredged or fill material into waters of the United States will require Department of the Army authorization prior to starting work.

To ascertain the extent of waters on the project site, the applicant should prepare a wetland delineation, in accordance with the "Minimum Standards for Acceptance of Preliminary Wetlands Delineations" and "Final Map and Drawing Standards for the South Pacific Division Regulatory Program" under "Jurisdiction" on our website at the address below, and submit it to this office for verification. A list of consultants that prepare wetland delineations and permit application documents is also available on our website at the same location.

The range of alternatives considered for this project should include alternatives that avoid impacts to wetlands or other waters of the United States. Every effort should be made to avoid project features which require the discharge of dredged or fill material into waters of the United States. In the event it can be clearly demonstrated there are

Comment Letter C

-2-

no practicable alternatives to filling waters of the United States, mitigation plans should be developed to compensate for the unavoidable losses resulting from project implementation.

If waters of the United States are going to be impacted, the Corps of Engineers must comply with all applicable federal laws. Therefore, cultural resource sites within the defined federal permit area, will need to be evaluated according to the standards of the National Environmental Policy Act. All eligible or potentially eligible cultural resource sites in the permit area will be subject to Section 106 of the National Historic Preservation Act, 1966, as amended. The Corps of Engineers must also comply with the terms and conditions of the Federal Endangered Species Act with regards to our permitting process. The applicant may be required to supply current reports on cultural resources and endangered species for our office to review during the permitting process.

Please refer to identification number SPK-2020-00675 in any correspondence concerning this project. If you have any questions, please contact me at the letterhead address, Room 1350, by email at *Kathy.Norton@usace.army.mil*, or telephone at (916) 557-5260. For more information regarding our program, please visit our website at *www.spk.usace.army.mil/Missions/Regulatory.aspx*.

Sincerely,

Kathy Norton

Name of Applicant:LUNA VALLEY SOLAR I, LLC
Address of Project:
City, State & Zip of Project:

Fresno County Fire Protection District (FCFPD) has received notice of the project and will continue to review the project for its potential impacts on the FCFPD.

Application Types

- | | |
|--|---------------------------------|
| Site Plan Review (SPR) | Initial Study Application (ISA) |
| Director Review Application (DRA) | Variance Application (VA) |
| Conditional Use Permit (CUP) | General Plan Application (GPA) |
| Tentative Parcel Map (TPM, TPMW) | Tentative Tract Map (TTM) |
| Pre-Application for Certificate of Compliance (PCOC) | |

All application types stated above **SHALL** comply with California Code of Regulations Title 24 – Fire Code. Prior to receiving your FCFPD conditions of approval for your project, you must submit construction plans to the County of Fresno Public Works and Planning and FCFPD for review. It is the **Applicants Responsibility** to deliver a minimum of **two (2)** sets of plans to the FCFPD.

Comment Letter D

EIR#7813
Page 2 of 2

Your Project/Development may be required to annex into the into Community Facilities District No. 2010-01 of the Fresno County Fire Protection District. Project/Developments included: Single Family Residential (SFR), SFR Properties subdivided into three (3) or more housing units, Multi-Family Residential (MFR) Property, Commercial Property, Industrial Property, and/or Office Property.

Project/Developments will be subject to the requirements of the current Fire Code and Building Code when a building permit or certificate of occupancy is sought.

Before plans are submitted to the Fresno County Fire Protection District, please visit our website at www.fresnocountyfire.org and complete the Fire Permit Application to submit with your plans.

Please Note – requirements for your project may include but are not limited to:

- | | |
|-----------------------------------|--------------------------------|
| Water Flow Requirements | Fire Hydrants |
| Water Storage Requirements | Fire Sprinklers Systems |
| Fire Pumps | Fire Alarm Systems |
| Road Access | Premises Identification |

Please contact the FCFPD at **(559) 493-4359** to schedule an over the counter meeting to receive specific requirements for your project. Failure to schedule an appointment with the FCFPD will affect your ability to obtain final approval for your project.

Sincerely,

MARK A. JOHNSON
District Fire Chief

SCH# 2020080488

SENT VIA EMAIL

Jeremy Shaw, Planner
Development Services Division
Department of Public Works and Planning
2220 Tulare Street, 6th Floor
Fresno, CA. 93721

Dear Mr. Shaw:

Thank you for the opportunity to review Notice of Preparation (NOP) for a Draft Environmental Impact Report (DEIR) #7813, proposing a 200-megawatt solar-generated power station on 16 parcels with an approximate area of 1,300-acres. The Project is generally bounded to the east by State Route (SR) 33 (South Derrick Avenue), West Dinuba Avenue to the south, South Bernardino Avenue to the west, and West South Avenue to the north, in Fresno County.

Caltrans provides the following comments consistent with the State's smart mobility goals that support a vibrant economy and sustainable communities.

1. Caltrans recommends that the Project pay into the Fresno County Regional Traffic Mitigation Fee or RTMF for on-going development in the vicinity.
2. Proposed Project alternatives to design should avoid direct access to and from SR-33 during all phases of construction and during normal operations.
3. Design and Project alternatives should include the number of employees expected to be on site for each shift and proposed utilities.
4. Caltrans may require that a Transportation Management Plan (TMP) for SR-33 be prepared and will have to be consistent with California's Manual on Uniform Traffic Control Devices (MUTCD). In addition, the TMP may contain a Temporary Traffic Control (TTC) plan that addresses traffic safety and control through the work zone.
5. Any proposed traffic control devices within our State facilities will require an Encroachment Permit. Please have the preparer of the TMP submit the plan for our review and approval. The approval of the TMP must be done prior to the approval of an Encroachment Permit. Additional requirements may arise during the permit process.
6. Components of the Project where adjacent to SR-33 should not encroach into State

"Provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability"

Mr. Shaw- LUNA VALLEY SOLAR PROJECT
September 16, 2020
Page 2

right-of-way. If the project design proposes to encroach into State right-of-way, approval of an Encroachment Permit will be required.

7. An encroachment permit must be obtained for all proposed activities for placement of encroachments within, under or over the State highway rights-of-way. Activity and work planned in the State right-of-way shall be performed to State standards and specifications, at no cost to the State. Engineering plans, calculations, specifications, and reports (documents) shall be stamped and signed by a licensed Engineer or Architect. Engineering documents for encroachment permit activity and work in the State right-of-way may be submitted using English Units. The Permit Department and the Environmental Planning Branch will review and approve the activity and work in the State right-of-way before an encroachment permit is issued. The Streets and Highways Code Section 670 provides Caltrans discretionary approval authority for projects that encroach on the State Highway System. Encroachment permits will be issued in accordance with Streets and Highway Codes, Section 671.5, "Time Limitations." Encroachment permits do not run with the land. A change of ownership requires a new permit application. Only the legal property owner or his/her authorized agent can pursue obtaining an encroachment permit. **Please call the Caltrans Encroachment Permit Office - District 6: 1352 W. Olive, Fresno, CA 93778, at (559) 488-4058. Please review the permit application checklist at:**
<https://forms.dot.ca.gov/v2Forms/servlet/FormRenderer?frmId=TR0402&distpath=MAOTO&brapath=PERM>
8. Upon project approval by the local public agency and prior to an encroachment permit application submittal, the project proponent is required to schedule a "Pre-Submittal" meeting with District 6 Encroachment Permit Office. **Please contact District 6 Encroachment Permit Office at (559) 488-4058 to schedule this meeting.**
9. According to the Caltrans Transportation Concept Report (TCR), this segment of SR 33 in the vicinity of the proposed project is currently a 2-lane conventional highway and ultimately planned to be a 4-lane facility within a total of 110 feet of right-of-way (55 feet from the centerline). Caltrans right-of-way maps shows this segment of SR 33 existing at 100 feet with 50 feet from the centerline on the westside of SR 33.
10. An Irrevocable Offer of Dedication to Caltrans for 5 feet of right-of-way is needed to accommodate the ultimate configuration of SR 33. Dedications should be required by the Lead Agency and should be shown on a revised site plan and forwarded for our review.
11. As development of the project continues, Caltrans requests that progress project plans be submitted to our office for further review. At that time, the Office of Traffic Operations will provide additional comments.

Subject: EIR #7813

Jeremy,

I represent our family who own parcels 028-101-13 and 028-101-14. These two parcels are bordered on two sides (east & north) by the Luna Valley Solar Project EIR #7813. Historically turns roads have been shared equally by our neighboring land owners. We want to make sure the Luna Valley Solar will have set backs for the fence they will be installing around their solar project adjacent to our parcels.

Could you please advise at your earliest convenience what those setbacks will be. I can be reached at (559) 288-1429 or by email.

Thanks Frank

Project: NOP of DEIR 7813 for Luna Valley Solar Project

District CEQA Reference No: 20200727

Dear Mr. Shaw:

The San Joaquin Valley Unified Air Pollution Control District (District) has reviewed the project referenced above from the County of Fresno (County) consisting construction, operation, and ultimately decommission an approximately 200-megawatt alternating current (MWAC) photovoltaic (PV) energy generation project, energy storage system (ESS), and related facilities and infrastructure, to be known as the Luna Valley Solar Project (Project). The Project is located at approximately 2,600 ft. (feet) east of S. Bernardino Avenue, the northern edge is approximately 1,400 ft. south of W. South Avenue, and the southern edge is approximately 1,300 ft. north of W. Dinuba Avenue approximately nine miles west-southwest from Tranquility, CA.

Project Description

The Project consists of 1,300-acre on Westlands Water District-owned lands in western Fresno County. The Project includes construction, operation, and ultimately decommission an approximately 200-megawatt alternating current (MWAC) photovoltaic (PV) energy generation project, energy storage system (ESS), and related facilities and infrastructure. The Project would generate and deliver solar-generated power to the California electrical grid via PG&E's existing Tranquility Switching Station. Construction is anticipated to be approximately 18 months set begin in 2022, and the facility would begin operation in 2023. During construction, vehicles will use existing to utilize existing interior access roads, however these roads may be improved with the addition of an aggregate base or other native material with a soil stabilization material, if necessary. A new 100 by 50 feet operations and maintenance building will be constructed near the southwest corner of the Project.

www.valleyair.org www.healthyairliving.com

The District's initial review of the Project concludes that emissions resulting from construction and/or operation of the Project may exceed the following thresholds of significance: 100 tons per year of carbon monoxide (CO), 10 tons per year of oxides of nitrogen (NOx), 10 tons per year of reactive organic gases (ROG), 27 tons per year of oxides of sulfur (SOx), 15 tons per year of particulate matter of 10 microns or less in size (PM10), or 15 tons per year of particulate matter of 2.5 microns or less in size (PM2.5). The District recommends that a more detailed preliminary review of the Project be conducted for the Project's construction and operational emissions.

Other potential significant air quality impacts related to Toxic Air Contaminants (see information below under Health Risk Assessment), Ambient Air Quality Standards, Hazards and Odors, may require assessments and mitigation. More information can be found in the District's Guidance for Assessing and Mitigating Air Quality Impacts at: https://www.valleyair.org/transportation/GAMAQI_12-26-19.pdf

The District offers the following comments:

1) Project Related Criteria Pollutant Emissions

1a) Project Related Construction Emissions

Construction emissions are short-term emissions and should be evaluated separately from operational emissions. Equipment exhaust, as well as fugitive dust emissions should be quantified. For reference, the District's annual criteria thresholds of significance for construction are listed above.

The District recommends that the County consider the use of the cleanest reasonably available off-road construction practices (i.e. eliminating unnecessary idling) and fleets, as set forth in §2423 of Title 13 of the California Code of Regulations, and Part 89 of Title 40 Code of Federal Regulations as a mitigation measure to reduce Project related impacts from construction related exhaust emissions.

1b) Project Related Operational Emissions

Emissions from stationary sources and mobile sources should be analyzed separately. For reference, the District's annual criteria thresholds of significance for operational emissions are listed above.

1c) Recommended Model

Project related criteria pollutant emissions from construction and operational sources should be identified and quantified. Emissions analysis should be

performed using CalEEMod (**California Emission Estimator Model**), which uses the most recent approved version of relevant Air Resources Board (ARB) emissions models and emission factors. CalEEMod is available to the public and can be downloaded from the CalEEMod website at: www.caleemod.com.

2) Voluntary Emission Reduction Agreement

If the Project is expected to have a significant impact, the District recommends the EIR also include a discussion on the feasibility of implementing a Voluntary Emission Reduction Agreement (VERA) for this Project.

A VERA is a mitigation measure by which the project proponent provides pound-for-pound mitigation of emissions increases through a process that develops, funds, and implements emission reduction projects, with the District serving a role of administrator of the emissions reduction projects and verifier of the successful mitigation effort. To implement a VERA, the project proponent and the District enter into a contractual agreement in which the project proponent agrees to mitigate Project specific emissions by providing funds for the District's incentives programs. The funds are disbursed by the District in the form of grants for projects that achieve emission reductions. Thus, project-specific regional impacts on air quality can be fully mitigated. Types of emission reduction projects that have been funded in the past include electrification of stationary internal combustion engines (such as agricultural irrigation pumps), replacing old heavy-duty trucks with new, cleaner, more efficient heavy-duty trucks, and replacement of old farm tractors.

In implementing a VERA, the District verifies the actual emission reductions that have been achieved as a result of completed grant contracts, monitors the emission reduction projects, and ensures the enforceability of achieved reductions. After the project is mitigated, the District certifies to the Lead Agency that the mitigation is completed, providing the Lead Agency with an enforceable mitigation measure demonstrating that project-specific regional emissions have been mitigated to less than significant. To assist the Lead Agency and project proponent in ensuring that the environmental document is compliant with CEQA, the District recommends the Draft EIR includes an assessment of the feasibility of implementing a VERA.

3) Health Risk Screening/Assessment

A Health Risk Screening/Assessment identifies potential Toxic Air Contaminants (TAC's) impact on surrounding sensitive receptors such as hospitals, daycare centers, schools, work-sites, and residences. TAC's are air pollutants identified by the Office of Environmental Health Hazard Assessment/California Air Resources Board (OEHHA/CARB) that pose a present or potential hazard to human health. A

common source of TACs can be attributed to diesel exhaust emitted from both mobile and stationary sources. List of TAC's identified by OEHHA/CARB can be found at: <https://ww2.arb.ca.gov/resources/documents/carb-identified-toxic-air-contaminants>

The District recommends the Project be evaluated for potential health impacts to surrounding receptors (on-site and off-site) resulting from operational and multi-year construction TAC emissions.

- i) The District recommends conducting a screening analysis that includes all sources of emissions. A screening analysis is used to identify projects which may have a significant health impact. A prioritization, using CAPCOA's updated methodology, is the recommended screening method. A prioritization score of 10 or greater is considered to be significant and a refined Health Risk Assessment (HRA) should be performed.

For your convenience, the District's prioritization calculator can be found at: http://www.valleyair.org/busind/pto/emission_factors/Criteria/Toxics/Utilities/PRIORITIZATION%20RMR%202016.XLS.

- ii) The District recommends a refined HRA for projects that result in a prioritization score of 10 or greater. Prior to performing an HRA, it is recommended that the Project proponent contact the District to review the proposed modeling protocol. The Project would be considered to have a significant health risk if the HRA demonstrates that the Project related health impacts would exceed the District's significance threshold of 20 in a million for carcinogenic risk and 1.0 for the Acute and Chronic Hazard Indices, and would trigger all feasible mitigation measures. The District recommends that Projects that result in a significant health risk not be approved.

For HRA submittals, please provide the following information electronically to the District for review:

- HRA AERMOD model files
- HARP2 files
- Summary of emissions source locations, emissions rates, and emission factor calculations and methodology.

More information on toxic emission factors, prioritizations and HRAs can be obtained by:

- E-Mailing inquiries to: hramodeler@valleyair.org; or
- The District can be contacted at (559) 230-6000 for assistance; or
- Visiting the District's website (Modeling Guidance) at:
http://www.valleyair.org/busind/pto/Tox_Resources/AirQualityMonitoring.htm.

4) Health Impact Discussion

As required by the recent decision in *Sierra Club v. County of Fresno* (2018) 6 Cal.4th 502, a reasonable effort to discuss relevant specifics regarding the connection between potential adverse air quality impacts from the Project with the likely nature and magnitude of potential health impacts. If the potential health impacts from the Project cannot be specifically correlated, explain what is known and why, given scientific constraints, potential health impacts cannot be translated.

5) Cumulative Air Impacts

In addition to the discussions on the topics identified above, the District recommends the EIR also include a discussion of whether the Project would result in a cumulatively considerable net increase of any criteria pollutant or precursor for which the San Joaquin Valley Air Basin is in non-attainment. More information on the District's attainment status can be found online by visiting the District's website at: <http://valleyair.org/aqinfo/attainment.htm>.

6) District Rules and Regulations

The District issues permits for many types of air pollution sources and regulates some activities not requiring permits. A project subject to District rules and regulation would reduce its impacts on air quality through compliance with regulatory requirements. In general, a regulation is a collection of rules, each of which deals with a specific topic. Here are a couple of example, Regulation II (Permits) deals with permitting emission sources and includes rules such as District permit requirements (Rule 2010), New and Modified Stationary Source Review (Rule 2201), and implementation of Emission Reduction Credit Banking (Rule 2301).

The list of rules below is neither exhaustive nor exclusive. Current District rules can be found online at: www.valleyair.org/rules/1ruleslist.htm. To identify other District rules or regulations that apply to this Project or to obtain information about District permit requirements, the applicant is strongly encouraged to contact the District's Small Business Assistance (SBA) Office at (559) 230-5888.

6a) District Rules 2010 and 2201 - Air Quality Permitting for Stationary Sources

Stationary Source emissions include any building, structure, facility, or installation which emits or may emit any affected pollutant directly or as a fugitive emission. District Rule 2010 requires operators of emission sources to obtain an Authority to Construct (ATC) and Permit to Operate (PTO) from the District. District Rule 2201 requires that new and modified stationary sources of emissions mitigate their emissions using best available control technology (BACT).

This Project may be subject to District Rule 2010 (Permits Required) and Rule 2201 (New and Modified Stationary Source Review) and may require District permits. Prior to construction, the Project proponent should submit to the District an application for an Authority to Construct (ATC). For further information or assistance, the project proponent may contact the District's Small Business Assistance (SBA) Office at (559) 230-5888.

6b) District Rule 9510 (Indirect Source Review)

The purpose of District Rule 9510 is to reduce the growth in both NO_x and PM₁₀ emissions associated with development and transportation projects from mobile and area sources associated with construction and operation of development projects. The rule encourages clean air design elements to be incorporated into development projects. In case the proposed development project clean air design elements are insufficient to meet the targeted emission reductions, the rule requires developers to pay a fee used to fund projects to achieve off-site emissions reductions.

The proposed Project is subject to District Rule 9510 because it will receive a project-level approval from a public agency and will equal or exceed 9,000 square feet of space not identified above. When subject to the rule, an Air Impact Assessment (AIA) application is required prior to applying for project-level approval from a public agency. In this case, if not already done, please inform the project proponent to immediately submit an AIA application to the District to comply with District Rule 9510.

An AIA application is required and the District recommends that demonstration of compliance with District Rule 9510, before issuance of the first building permit, be made a condition of Project approval.

Information about how to comply with District Rule 9510 can be found online at: <http://www.valleyair.org/ISR/ISRHome.htm>.

The AIA application form can be found online at:
<http://www.valleyair.org/ISR/ISRFormsAndApplications.htm>.

6c) Other District Rules and Regulations

The may also be subject to the following District rules: Regulation VIII, (Fugitive PM10 Prohibitions), Rule 4102 (Nuisance), Rule 4601 (Architectural Coatings), and Rule 4641 (Cutback, Slow Cure, and Emulsified Asphalt, Paving and Maintenance Operations). In the event an existing building will be renovated, partially demolished or removed, the project may be subject to District Rule 4002 (National Emission Standards for Hazardous Air Pollutants).

7) District Comment Letter

The District recommends that a copy of the District's comments be provided to the Project proponent.

If you have any questions or require further information, please contact Keanu Morin by e-mail at keanu.morin@valleyair.org or by phone at (559) 230-5808.

Sincerely,

Arnaud Marjollet
Director of Permit Services

Traffic Scoping Meeting Notes

This page intentionally left blank

Inter Office Memo

DATE: July 29, 2020

TO: Aarty Joshi, Clearway Energy
Brian Spaunhurst, Fresno County
Chuck Luna, Tetra Tech
David Padilla, Caltrans
David Randall, Fresno County
Gloria Hensley, Fresno County
Jennifer Merrick, Tetra Tech

FROM: Chrissy Monfette, Development Services and Capital Projects *am*

SUBJECT: Traffic Scoping Meeting Notes
Luna Valley Solar EIR 7813 CUP 3671

- Construction trip estimates appear to be low, confirm that these are based on conservative estimates.
- Include Whitesbridge/180, California Avenue, and Panoche Avenue in the intersection analysis.
- Consider the overlap of other nearby Solar Facilities and plan to coordinate Traffic Management Plans if necessary.
- Additional information may be available in other reports prepared for nearby solar projects
 - Brian Spaunhurst will perform preliminary research to determine which projects could affect the site; Chrissy Monfette will provide copies of documents for those projects.
- Traffic Counts during Covid
 - May not be worthwhile to take new counts – just use the ones from earlier studies
 - May need to prepare a conversion number to estimate actual counts.
 - Uncertain if traffic will return to pre-Covid conditions or if continued telecommuting will result in lighter traffic conditions.
- Both LOS and VMT analysis are required.
 - Thresholds of Significance for VMT have not been adopted by the County.
 - State Guidance can be used; however, it does not apply directly to industrial projects like solar and concentrates more on residential

- TI Analysis may be required; however, Wendy Nakagawa will confirm once she returns to the office.
- No full replacement scenarios are assumed (the lifetime of the panels and batteries will be equal to or greater than the life of the proposed project)
 - Some maintenance of panels and batteries will be required, and some may be replaced as necessary.
- A revised scoping letter shall be submitted, but no additional scoping meeting will be necessary.

If you have any questions, you may reach out to me at cmonfette@fresnocountyca.gov or (559) 600-4245.

1 INTRODUCTION

1.1 BACKGROUND AND PURPOSE

Luna Valley Solar I, LLC (Applicant) is proposing to develop, own, and operate the Luna Valley Solar Project (Project) in Fresno County, California, 9 miles west-southwest of the city of Tranquility within the unincorporated area of the town of Levis (Figure 1). The Project consists of constructing and operating a utility-scale alternating current (AC) photovoltaic solar generating and energy storage facility that would produce up to 200 megawatts of energy at the point of interconnection on the electrical grid located on approximately 1,300 acres of privately-owned agricultural land (Figure 2). The Project would include the construction of access roads, electrical interconnection, and a Project substation.

The Project area is zoned Exclusive Agriculture AE – 20, Exclusive Agriculture; 20-acre minimum parcel size. Within this zoning district, Fresno County permits utility-scale solar energy uses with an Unclassified Conditional-Use Permit (UCUP). The Applicant selected the Project area based on its previously disturbed nature and close proximity to electrical infrastructure and designed the Project in accordance with state and county regulations.

Upon approval, the UCUP is subject to the Conditions of Approval and Mitigation Measures set forth in the Fresno County Board of Supervisor's Resolution in accordance with the California Environmental Quality Act of 1970 (California Public Resources Code § 21000 et seq.) and the California Code of Regulations (Title 14 § 15000 et seq.).

This Integrated Pest Management (IPM) Plan has been prepared to comply with the Project's anticipated Fresno County UCUP. The following pest-control measures were developed for the purpose of minimizing the likelihood of pests within the Project site and maximizing the ability to reduce the current (if present) pest population.

1.2 KEY COMPONENTS OF THE PROJECT

Upon completion of construction, the Project is planned to include the following key components:

- Solar field with arrays of photovoltaic modules that are up to 13 feet in height, arranged in rows with center-to-center spacing of approximately 230 feet, and mounted on single-axis trackers designed to optimize power production of the modules by ensuring proper orientation to the sun both daily and seasonally;
- Approximately 70 power conditioning stations that convert the direct current electricity from the solar array to AC and accumulate the AC electricity to an appropriate collection level voltage for movement to the Project substation and eventual delivery to the electrical grid;
- On-site Project substation and associated control room, located in the southwest corner of the Project site, with transformers, breakers, switches, meters, and other related equipment;
- Energy storage system in the southwest corner of the Project site, adjacent to the Project substation;
- Access roads including interior and perimeter access roads approximately 20 feet wide;
- Perimeter fencing 7 feet tall with one foot of three-strand concertina and access gates around entry points;
- Telecommunications interconnection at the Project substation;
- Meteorological data collection systems mounted at various locations to determine the optimal angle of the solar modules;
- Signage to allow for the identification of the Project owner and for safety and security purposes;

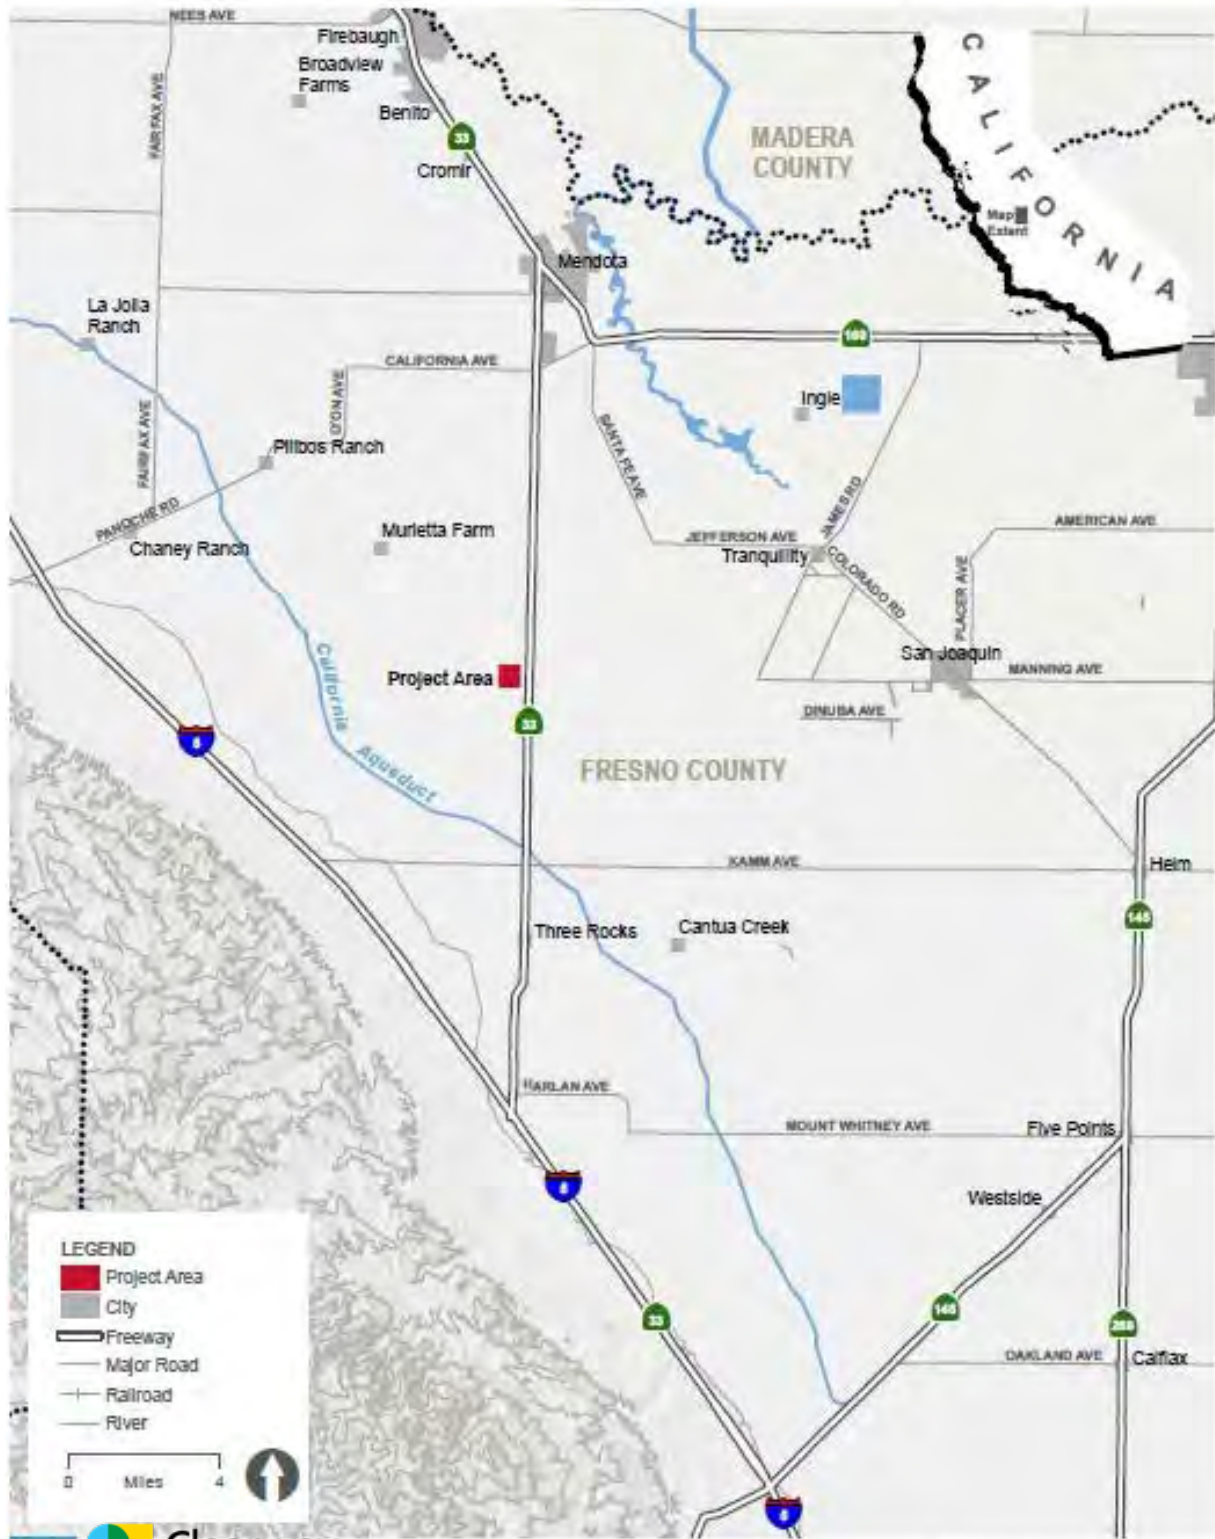

- Lighting to allow for ongoing maintenance and security;
- Stormwater facilities designed to follow the natural drainage pattern; and
- Other infrastructure including an operations and maintenance building and sanitary facilities.

The Project site is within an unincorporated area of the Central Valley and generally bound by flat, agricultural lands and other solar energy facilities. The nearest city is Tranquility, approximately 9 miles to the east-northeast. Interstate 5, paralleled to the east by the California Aqueduct, is approximately 11 miles to the west as well as to the south of Project area. The cities of Mendota and San Joaquin are approximately 10 miles north and east of Project area, respectively. The San Joaquin Airport is roughly 9.5 miles east of the Project area.

More specifically, Highway 33 (S. Derrick Avenue) makes up the eastern boundary of the Project area. The western edge of the Project area is approximately 2,600 feet east of South San Bernardino Avenue, the northern edge is approximately 1,400 feet south of W. South Avenue, and the southern edge is approximately 1,300 feet north of W. Dinuba Avenue. W. Manning Avenue cuts through the approximate middle of the Project area from east to west and S. Ohio Avenue cuts through the approximate middle of the Project area from north to south.

The Project site is entirely within the U.S. Geological Survey 7.5-minute topographic quadrangle of Levis. The Project area is located within Township 15 South, Range 14 East, Sections 23, 24, 25, and 26. The Project site is located approximately within the latitudes of 36.59° and 36.61° and within the longitudes of -120.39° and -120.42° (in decimal degrees). The Project area centroid is located at approximately latitude/longitude 36°36'12"N/120°24'05"W (WGS1984).

PROJECT LOCATION
FIGURE 1

Figure 2. Project Site

2 PEST MANAGEMENT GOALS

This IPM Plan has been prepared to comply with the Project's anticipated Fresno County UCUP. The following pest-control measures are based on widely accepted IPM protocols and were developed for the purpose of minimizing the likelihood of pests (including weeds) within the Project site and maximizing the ability to reduce the current (if present) pest population. The IPM Plan will focus on keeping the Project area's pest population under control.

3 STRATEGY

This IPM Plan promotes the use of a range of preventative and non-chemical approaches to control pest populations and stave off infestation. If an infestation with unacceptable impacts occurs, thereby warranting additional treatment, IPM protocol favors the use of least-toxic pesticides. The targeted application of a toxic pesticide is allowed only after all other reasonable non-toxic options are exhausted. This plan outlines preventative best practices and pest control strategies. Provisions for the use of least-toxic pesticides, and toxic chemicals when necessary, are outlined should a pest infestation occur.

4 PERFORMANCE MEASUREMENTS, QUALITY ASSURANCE, AND CONTROL

The environmental performance of the IPM Plan shall be compiled from IPM records and analyzed on an annual basis. An IPM report identifying the types of pest problems encountered on site and the types and quantities of all pesticides used shall be generated by Project personnel for review. The following metrics shall be tracked throughout the year and documented in the report to evaluate the IPM Plan:

1. The severity and location of all major pest infestations
2. The amount of each pesticide product used by volume

Routine inspection and monitoring are to be performed by designated Project personnel. Particular attention will be paid to problem areas, referring to the IPM log for guidance. The overall IPM program will be reviewed on an annual basis.

5 RESPONSIBLE PARTIES

The Operations Manager is responsible for monitoring consistent and correct implementation of the IPM Plan. The Project is responsible for record keeping and performance measurement. The compiled records from all parties will be synthesized as part of an annual IPM Plan review

6 PRACTICES

The following sections include general and specific chemical, manual, and cultural pest control strategies. Pest control chemicals other than glyphosate (e.g. Roundup) and pelargonic acid (e.g. Scythe) can only be applied by a credentialed applicator in the state of California and it is necessary to confirm that the applicator has all the necessary federal, state, and local agency permits.

6.1 WEED CONTROL PRACTICES

Chemical pesticides are seen as a last resort under the tenets of IPM. Mechanical and chemical methods are time consuming and costly. Preventative strategies are the safest, most environmentally sound, and most cost-effective weed control practice.

6.1.1 Weed Prevention

Preventative strategies to control the spread of weed seed within the Project area include the following:

- Clean all vehicles inside and out at a commercial washing station, this will prevent weed seeds that are carried in tire treads, etc. from being carried onto the property.
- If disturbed ground is not otherwise stabilized, revegetation may be used on portions of the disturbed ground with a County approved native perennial seed mix that is certified as a weed free seed by the vendor. This will help prevent any windblown weed seed from landing on bare soil and germinating.
- Limit ground disturbance to reduce the amount of bare soil and potential for the weed seed to germinate.

6.1.2 Mechanical Controls

Mechanical strategies to remove existing and new weed populations include the following:

- Regular inspections of the property should be made to identify weeds before they go to seed.
- Remove weed species when identified. This can be done by pulling the entire plant out of the soil and disposing of it. It is especially important to remove weeds before the seed head matures.
- Handheld string trimmers (Weed Eaters) or mowers can be used in the larger open spaces if needed but those activities should be timed before the weeds develop seed heads.

6.1.3 Chemical Controls

Chemical pesticides are to be used by Project personnel after non-chemical options have been exhausted, with a preference for use of a low risk pesticide. Low risk pesticides are determined by hazard screening to be of "lowest concern," because the product contains:

- No known, likely, or probable carcinogens
- No reproductive toxicants (CA Prop 65 list)
- No ingredients listed by the U.S. Environmental Protection Agency as known, probable, or suspect endocrine disrupters
- Active ingredients have a soil half-life of thirty days or less
- Labeled as not toxic to fish, birds, bees, wildlife, or domestic animals

6.2 GENERAL ANIMAL CONTROL PRACTICES

The most important aspect of animal control is trash management. Good sanitation practices will reduce habitat and food sources for pests. Trash containers should be rodent proof and areas around trash containers should be free of spillage or garbage to prevent the collection of trash or debris on the ground on or around the containers. Trash containers should be kept clean, free of odors, and covered at all times.

The following practices are designed to help prevent unwanted animals from gaining access to buildings on site:

- Monthly visual inspections of outside and interior walls as well as any attic space.
- Maintain the building exterior in good repair with no holes or openings larger than 0.25-inch including, but is not limited to, windows, doors, fans, vents, etc., to keep pests from entering the building.
- Address any deficiencies in the building exterior with corrective measures, i.e., cementing, screening, caulking, installing stripping on door bases, etc.
- Maintain door sweeps on all applicable doors to produce a good seal to the ground.

- Keep grounds free of high weeds, trash, old equipment and debris, as these conditions create ideal harborage for rodents.
- Water used for dust abatement will be minimized, as allowed by Fresno County, and managed to prevent puddles forming that may attract rodents.

6.3 RODENT CONTROL PRACTICES

In addition to the general animal control practices listed above, it is recommended that the following practices be implemented specifically for rodent control:

- Visual surveys should be conducted weekly to determine if rodent infestations are occurring, the source of the problem, and the conditions that encourage the infestation.
- Remove food sources.
- Eliminate places of refuge.
- Openings in building foundations and walls should be closed or screened with wire mesh that has holes not more than 0.25-inch wide. Where pipes enter masonry, force heavy hardware cloth or steel wool into the opening, then fill it with concrete.
- Continuous surveillance is necessary and places where rodents have been gnawing to gain entry to a building should be sealed with metal flashing.
- Doors are particularly vulnerable to rodent entry so ensure that external doors and windows close tightly with no gaps at the bottom.
- Materials stored in the open, in sheds or in buildings should be stacked at least 1 foot above the ground.

If the rodent populations need to be actively managed and the infestation is indoors, snap traps or battery-operated traps that generate high voltage once the rat or mouse is inside are the most efficient control method. Rodent populations are not expected to become an issue at the outdoor solar arrays, there is little in the way of habitat and food and natural predators are likely present. If the above methods of rodent control fail, the last resort is to use a rodenticide.

Rodenticides will be limited to zinc phosphide because of its proven lower risk to the San Joaquin Kit Fox. Bait stations shall be enclosed so the opening is accessible for the target rodent, but the opening should be at an elevated angle so that the bait stays inside the trap at all time.

6.4 CHEMICAL APPLICATION PROCESSES

All chemical application and advice on pest management problems will be made by a licensed pest control company, particularly in the creation of a customized treatment plan which may require detailed knowledge of the biology and ecology of a particular species. No herbicides should be stored on the property and a specialist must prepare the chemicals off-site to limit the chances of a spill. Herbicides are not to be sprayed within the buffer zone on any sensitive resource area without prior authorization from the appropriate regulatory agency.

6.4.1 Contractor Requirements and Spill Control

All contractors responsible for herbicide use, transport, application, and control at the site will hold the appropriate certifications. Such certifications shall be made available. Contractors transporting herbicides to the site shall also have legible Safety Data Sheets and labels on site.

Spill kits will be available on site and must be carried in herbicide contractor vehicles. If a spill or inadvertent release occurs the following protocol should be followed:

- Notify the Operations Manager and the appropriate regulatory agencies immediately.
- Secure the affected area barring pedestrian and vehicle traffic.

- All spill response personnel shall put on the appropriate Personal Protective Equipment (PPE) prior to entering the spill containment area.
- Personnel, while wearing the appropriate PPE and equipped with the necessary tools and equipment, shall stop the herbicide leak or release.
- All materials associated with spill response, including the released herbicide, affected soils and plants, absorptive material, clothing, and PPE shall be removed and containerized according to appropriate regulations and procedures.
- All generated spill response containers shall be transported, following appropriate regulations, and disposed legally at an approved disposal facility.

6.4.2 Application Procedures

Chemical pesticide applications on site will occur using the following general best management practices:

- Time the treatment to coincide with the presence of the pest.
- Use a selective chemical that has the least effect on non-target species and treat only the area affected.
- Spraying must not be carried out in unsuitable weather. Anyone operating sprayers must have access to a wind-speed meter and only spray when the wind speed is less than 10 miles per hour.
- Hours of work must be controlled so that neighbors are not exposed.
- Spray equipment must be frequently checked and properly maintained, both for health and safety reasons and to minimize spray drift.
- Users must wear protective clothing appropriate to the pest chemical application used.
- Ensure that anyone handling toxic chemicals never works alone and that the work area is well-ventilated.
- Require respirators for outdoor spraying or dusting of organic phosphorus compounds.
- Eating, drinking and smoking must be prohibited when using or handling chemicals.
- Users must be familiar with the effects on the body of the chemicals they are likely to be using, and how the chemicals may enter the body.
- Users must be aware of the signs and symptoms of acute poisoning related to chemicals they are using. They must stop work if they are feeling ill and seek medical advice.

7 RECORD KEEPING – IPM LOG

Monitoring the effectiveness of the IPM Plan over time requires diligent tracking of several items: pest populations and locations; management strategies employed; quantities and types of chemicals and products used; and the outcome of pest management activities. The Project Operations Manager shall maintain records in an IPM logbook that include the information below.

1. Notification to neighbors and others who may be affected: date, time method
2. Date, time and location of pesticide application
3. Target pest
4. Identify threshold for treatment (acres or number of animals)
5. Prevention and other non-chemical methods of control used
6. Type and quantity of pesticide used, including trade name and active ingredient
7. Summary of results
8. Name of the pesticide applicator
9. Application equipment used

1 CURRENT AND PROPOSED CONDITIONS

1.1 INTRODUCTION

This document has been prepared for the review and approval of Fresno County Department of Public Works and Planning. The objective of this Reclamation Plan is to describe the reclamation activities associated with the Luna Valley Solar Project (Project) following cessation of the Project’s operations or the abandonment of the Project. The facility is intended to operate for 35 years or more. The general decommissioning approach will be the same whether a portion of the Project or the entire Project is decommissioned.

Most parts of the proposed system are recyclable. Modules typically consist of silicon, glass, and an aluminum frame. Tracking systems typically consist of steel and concrete, in addition to motors and control systems. All of these materials can be recycled.

Numerous recyclers for the various materials to be used on the Project site operate in Fresno and other nearby counties. Metal, scrap equipment, and parts that do not have free-flowing oil can be sent for salvage. Equipment containing any free-flowing oil would be managed as waste and would require evaluation. Oil and lubricants removed from equipment would be managed as used oil, which is a hazardous waste in California. Decommissioning would comply with federal, state, county and other local standards and all regulations that exist when the Project is shut down.

1.2 PRESENT USE

The site has historically been used for dry-farmed (non-irrigated) agriculture (low-yield production of winter wheat and oats) and has been used for this purpose for the last 10 years. Agricultural land in this area has been documented to contain relatively high levels of selenium and a water table that does not provide sufficient drainage for commercially irrigated crops. During years in which rainfall is insufficient to produce crops, the land is grazed as rangeland grasses. Currently, some portions of the Project area lie fallow while the majority of the area is used to grow livestock fodder such as alfalfa.

Only one parcel (Assessor’s Parcel Number 028-60-72ST) has a well. The well is located at 36° 36’ 13.22” N/120° 24’ 22.67” W. However, the well is currently non-operational and the water table is estimated at 995 feet below the surface of the ground. All other water used within the Project site parcels is provided from the water district.

Table 1. Historic Land Use

Assessor’s Parcel Number	Historical Ag Use (if none within past 10 years, specify what was last in ag use)	Crop Types (10 years)	Source of water for parcel (irrigation district, well(s), conjunctive system)	Well Onsite?
028-060-34T	Fallowed Dry Farmed non irrigated	Wheat, alfalfa seed, Grazing	Irrigation District	No
028-060-69ST	Fallowed Dry Farmed non irrigated	Wheat, alfalfa seed, Grazing	Irrigation District	No
028-060-70ST	Fallowed Dry Farmed non irrigated	Wheat, alfalfa seed, Grazing	Irrigation District	No
028-60-71ST	Fallowed Dry Farmed non irrigated	Wheat, alfalfa seed, Grazing	Irrigation District	No
028-60-72ST	Fallowed Dry Farmed non irrigated	Wheat, alfalfa seed, Grazing	Irrigation District	Yes

Assessor's Parcel Number	Historical Ag Use (if none within past 10 years, specify what was last in ag use)	Crop Types (10 years)	Source of water for parcel (irrigation district, well(s), conjunctive system)	Well Onsite?
028-101-15ST	Fallowed Dry Farmed non irrigated	Wheat, alfalfa seed, Grazing	Irrigation District	No

1.3 PROPOSED ALTERNATIVE USE

Luna Valley Solar I, LLC (Applicant) is proposing to develop, own, and operate the Project in Fresno County, California, located 9 miles west-southwest of the city of Tranquility within the unincorporated area of the town of Levis. The Project consists of constructing a utility-scale alternating current (AC) photovoltaic (PV) solar power generating farm that would produce up to approximately 200 megawatts of energy at the point of interconnection and include battery storage on approximately 1,300 acres of privately-owned agricultural land. The Project would include the construction of access roads, electrical interconnection, and a Project substation.

The Project area is zoned AE-20, Exclusive Agriculture; 20-acre minimum parcel size. Within this zoning district, Fresno County permits utility-scale solar energy uses with an Unclassified Conditional-Use Permit. The Applicant selected the Project area based on its previously disturbed nature and close proximity to electrical infrastructure and designed the Project in accordance with state and county regulations.

1.3.1 Key Components of the Project

Upon completion of construction, the Project is planned to include the following key components:

- Solar field with arrays of PV modules;
- Inverters, combiners, and transformers;
- Overhead and buried conduits;
- On-site medium-voltage (34.5 kilovolt [kV]) collection lines;
- Project substation;

- Aboveground generation-tie line with poles approximately 175 feet in height;
- Energy storage system;
- On-site unpaved access roads;
- Security fencing located along the site perimeter; and
- Construction laydown areas, equipment, and structures
- On-site Operations and Maintenance building.

1.4 DURATION OF ALTERNATE USE

The Project has an expected useful life of 35 years and is expected to be operational in 2023 and remain in operation through 2058. It is possible that the useful life of the Project could be extended through maintenance of existing equipment or with equipment replacement and could remain in operation beyond 2058.

1.5 OWNERSHIP OF THE PROPERTY

The land is currently owned by Westlands Water District, and is under a purchase option agreement with the Applicant, Luna Valley Solar I, LLC who intends to purchase the land prior to starting Project construction.

2 EQUIPMENT DISMANTLING AND REMOVAL

2.1 RECLAMATION TIMELINE

Pre-dismantling activities include de-energizing and isolating the Project from external electrical lines and delineated staging areas. As reclamation and equipment removal can take a year or more, access roads, fencing, and electrical power may temporarily remain in place for use by the reclamation and restoration workers until no longer needed.

2.2 GENERAL ENVIRONMENTAL PROTECTION

Environmental protection and mitigation measures would be implemented during Project reclamation and restoration, similar to measures taken during construction and operations. Reclamation will attempt to maximize the recycling of all facility components. Specific opportunities for recycling (e.g., PV solar modules) are discussed below in the context of various site components. The individual Project components to be reclaimed will be recycled to the maximum extent practical. The general reclamation approach will be the same whether a portion of the Project or the entire Project is reclaimed.

2.3 MANAGEMENT OF HAZARDOUS WASTE AND EXCESS MATERIALS

The management of wastes and excess materials will be in accordance with local, state, and federal laws. Hazardous wastes are not anticipated to be on site. If hazardous wastes do occur on site, they will be removed and disposed of in accordance with local, state, and federal laws.

2.4 EQUIPMENT DISMANTLING AND REMOVAL

2.4.1 Site Plan

A site plan showing the locations of all equipment, structures, above and underground utilities, fencing, and buffer areas has been attached to this document (Attachment 1).

2.4.2 PV Module Collection and Recycling

The PV solar modules and rack supports will be removed in their entirety from the site using cranes, dump trucks, and flat-bed and rear-loader garbage trucks. The support posts will be removed by excavators with attachments. Cranes may be required to remove equipment with concrete foundations. The demolition debris and removed equipment may be cut or dismantled into pieces that can be safely lifted or carried with the on-site equipment being used. The majority will be processed for transportation to an offsite recycling center. All steel, copper, and aluminum will be recycled.

The PV modules will be de-energized and dismantled from the torque tubes. The modules will then be collected into rear-loading trucks and will be redeployed into a secondary market. All salvageable material will be removed from the Project site for resale or scrap.

2.4.3 Electrical Equipment

Electrical equipment including inverters, transformers, cables, overhead lines, and substation infrastructure will be reclaimed in accordance with local, state, and federal laws and all required permits will be obtained, as needed.

The inverters that convert direct current (DC) power to AC power and medium voltage transformers that increase the AC power voltage to 34.5 kV will also be dismantled and removed by cranes and flat-bed trucks. Insulating vegetable oil from the medium voltage transformers will be drained, removed from the site, and recycled or disposed of at an appropriately licensed disposal facility. The underground 34.5 kV cable/collection lines will be cut off and remain in place, or removed and recycled, as well as all AC and DC electrical wiring. All cables and wiring to be left in place will be cut off at a depth of 2 feet below grade.

2.4.4 Roads, Parking Area, and Substation Yard

On-site roads will remain in place to accomplish reclamation. At the time of reclamation, if the landowner determines that some of these roads will be beneficial for future use of the site, those roads may remain after reclamation. Roads that will not be re-used will be restored to preconstruction conditions. For the paved access driveways and parking area, pavement will be broken up and removed to an appropriate disposal site. If soils are significantly compacted, they will be restored using a disking method. The ground surface will be restored and revegetated to pre-construction conditions. Should areas need to be leveled, clean topsoil will be imported to the site by truck.

2.4.5 Other Components

Other components that will be removed during reclamation may include surface drains, road culverts, and fencing. These components will be recovered, used, or recycled as possible; those that cannot be recycled will be disposed of according to local, state, and federal laws. The chain link fence and gates surrounding the Project may be retained for safety and security purposes. Once other major reclamation activities are complete, the fencing will be removed and recycled.

2.5 SITE RESTORATION

The goal of Project restoration is to return the land to a condition where the current practice of dryland farming is possible. Photographs of the existing site are included as Attachment 2. Restoration will include the following actions:

- Project drainage features will be restored using suitable fill material.
- Roads, parking areas, and substation will be removed and restored to their pre-construction conditions and topography.
- Soils will be de-compacted using a disking method, as needed.
- As needed, topsoil will be used to restore suitable conditions for vegetation growth.
- The site will be reseeded using a mix that contains native species if the decision is made to return to rangeland or to winter wheat if the decision is made to return to cropland; the seed mix may be determined in consultation with Fresno County or local experts. If site restoration through reseeded is not feasible due to lack of water/drought or other environmental factors, Luna Valley will work with the County to identify and implement an alternate solution.
- Reseeding will be accomplished by broadcast using manually operated cyclone-type bucket spreaders, mechanical seed spreaders, blowers, hydroseeders, rubber-tired all-terrain vehicles equipped with mechanical broadcast spreaders, or other similar or more effective measures.

3 RECLAMATION COST ESTIMATES

The estimated costs for reclamation of the Project are shown below in Table 1. These costs are based on costs for measures to dismantle the facility, dispose of Project components, and make the Project site suitable for agricultural use following cessation of the Project's operations or the abandonment of the Project.

Table 1. Decommissioning Cost Estimate

Reclamation Item	Cost	Labor				Equipment			
	Total	Employees	Hours	Labor Rate	Subtotal	Type	Hours	Rates	Subtotal
Onsite oils and lubricants removed	\$ 17,500	2	300	\$ 50	\$ 15,000	Container	2	\$1,250	\$ 2,500
Substation components removed	\$ 49,630	4	630	\$ 75	\$ 47,250	Low bed truck	68	\$ 35	\$ 2,380
Electrical conduit removed	\$ 291,325	9	3700	\$ 75	\$277,500	Flat bed truck	395	\$ 35	\$ 13,825
PV modules removed and recycled	\$ 272,175	10	5069	\$ 50	\$253,450	Flat bed truck	535	\$ 35	\$ 18,725
PV modules support H-beams	\$ 303,750	10	4430	\$ 50	\$221,500	Backhoe	470	\$ 175	\$ 82,250
Electrical and electronic devices	\$ 112,750	5	970	\$ 75	\$ 72,750	Backhoe/Crane	100	\$ 400	\$ 40,000
Fencing, gates removed	\$ 151,625	4	1275	\$ 40	\$ 51,000	Backhoe	575	\$ 175	\$100,625
Roads, pathways, and other	\$ 60,800	4	595	\$ 40	\$ 23,800	CAT/backhoe	185	\$ 200	\$ 37,000
Site disced for revegetation	\$ 83,000	4	500	\$ 40	\$ 20,000	CAT/water truck	420	\$ 150	\$ 63,000
Total	\$1,342,555				Labor Total \$982,250				Equipment Total \$360,305

4 NOTIFICATION TO OWNERS OF RECORD

Westland Water District has explicitly given permission for the submission of all documents pertaining to the Conditional Use Permit including this Reclamation Plan. A copy of this signed document has been attached to this Reclamation Plan (Attachment 3).

1.0 OVERVIEW

Luna Valley Solar I, LLC (Applicant) is proposing to develop, own, and operate the Luna Valley Solar Project (Project) in Fresno County, California, 9 miles west-southwest of the city of Tranquillity within the unincorporated area of Levis (Figures 1, 2, and 3). The Project consists of constructing and operating a photovoltaic (PV) solar electricity generating facility and energy storage system (ESS) and associated infrastructure that would produce up to 200 megawatts of alternating current (AC) energy at the point of electrical grid interconnection on approximately 1,300 acres of privately owned agricultural land (Figure 2) in western Fresno County. The Project would include the construction of solar arrays, an electrical substation and associated electrical interconnection facilities, an ESS, and other necessary infrastructure, including an operations and maintenance (O&M) building, septic system and leach field, a supervisory control and data acquisition system, a meteorological data system, buried conduit for electrical wires, overhead collector lines, on-site access roads, and security fencing.

The Project area is zoned Exclusive Agriculture AE – 20, Exclusive Agriculture; 20-acre minimum parcel size. Within this zoning district, Fresno County permits utility-scale solar energy uses with an Unclassified Conditional Use Permit. The Applicant selected the Project site based on its previously disturbed nature and proximity to electrical infrastructure and designed the Project in accordance with state and county regulations.

Tetra Tech, Inc. was retained by the Applicant to perform a Visual Impact Assessment for the Project. This Visual Impact Assessment was prepared to identify and evaluate the potential visual and aesthetic impacts associated with construction and operation of this Project.

2.0 PROJECT LOCATION AND SITE HISTORY

2.1 LOCATION

The Project site is located in unincorporated Fresno County and generally bound by flat, agricultural lands and other solar energy generation facilities (Figure 1). The nearest city is Tranquillity, approximately 9 miles to the east-northeast. Interstate 5, paralleled to the east by the California Aqueduct, is approximately 11 miles to the west as well as to the south of the Project area (Figure 2). The cities of Mendota and San Joaquin are approximately 10 miles north and east of the Project area, respectively. The San Joaquin Airport is roughly 9.5 miles east of the Project area.

More specifically, Highway 33 (South Derrick Avenue) makes up the eastern boundary of the Project area. The western edge of the Project area is approximately 2,600 feet east of S. Bernardino Avenue, the northern edge is approximately 1,400 feet south of W. South Avenue, and the southern edge is approximately 1,300 feet north of W. Dinuba Avenue. W. Manning Avenue cuts through the approximate middle of the Project area from east to west and S. Ohio Avenue cuts through the approximate middle of the Project area from north to south.

The Project site is entirely within the U.S. Geological Survey 7.5-minute topographic quadrangle of Levis. The Project area is located within Township 15 South, Range 14 East, Sections 23, 24, 25, and 26 (Figure 3). The Project site is located approximately within the latitudes of 36.59° and 36.61° and within the longitudes of -120.39° and -120.42° (in decimal degrees). The Project area centroid is located at approximately latitude/longitude 36°36'12"N/120°24'05"W.

2.2 SITE HISTORY

The Project site is proposed to be located on lands owned by Westlands Water District (Westlands). Westlands acquired this property as part of the September 3, 2002 settlement agreement reached among the United States, Westlands, and others in the *Sumner Peck Ranch et al. v. Bureau of Reclamation et al.* lawsuit.

The Project site is located in an area of agricultural land use and identified as Farmland of Local Importance on the State Important Farmlands maps. In Fresno County, farmland of local importance includes all farmable lands that do not meet the definitions of Prime, Statewide, or Unique farmland. The site has historically been used for dry-farmed (non-irrigated) agriculture (low-yield production of winter wheat and oats) and has been used for this purpose for the last 10 years. Agricultural land in this area has been documented to contain relatively high levels of selenium and a water table that does not provide sufficient drainage for commercially irrigated crops. During years in which rainfall is insufficient to produce crops, the land is grazed as rangeland grasses. Currently, some portions of the Project area lie fallow while the majority of the area is used to grow livestock fodder such as alfalfa. None of the land within the Project site is covered by a Williamson Act Contract.

Highway 33, the eastern boundary of the Project area, extends from Ventura County in the south to San Joaquin County in the north. Designated as a state highway in 1934, Highway 33 traverses a desolate area of the Central Valley between Interstate 5 and Highway 99. Highway 33 traffic was significantly reduced as a result of Interstate 5 development.

3.0 PROJECT SITE – PARCELS TO BE DEVELOPED

Table 1 shows the assessor's parcel numbers for the Project site.

4.0 SCHEDULE

Construction is anticipated to begin in 2022. The facility would begin operation in 2023.

5.0 DETAILED PROJECT DESCRIPTION

5.1 FACILITIES AND DESIGN

5.1.1 Overview of Solar Energy Generating Technology

The Project would include a solar energy generating facility, direct current (DC) electricity to alternating current (AC) electricity power inverters and transformers or power conditioning stations, a Project on-site substation, battery ESS, and a connection to the Pacific Gas and Electric (PG&E)-owned Tranquillity substation. Major Project features are described below and shown on the Project Site Layout (Figure 4).

Other Project components include access roads, perimeter fences, telecommunications, a meteorological data collection system, signage, lighting, stormwater facilities, and an O&M building. These components are also discussed in detail below.

5.1.2 Photovoltaic Modules and Support Structures

The solar energy generation facility would consist of PV solar modules arranged into arrays supported by a racking system and tracker units that track the sun (Figure 5). The PV modules convert sunlight into electricity. When modules are mounted on tracking devices, they are referred to as trackers or tracker blocks. The trackers are organized in rows in a uniform grid pattern referred to as a solar array. The proposed Project would have multiple solar arrays electrically connected to form a utility-scale PV system.

The modules may be constructed of glass encasing crystalline silicon, poly crystalline silicon, or thin film technology. The PV modules would be dark blue, almost black in color, with minimal light reflection. A plastic binding material and metal frame provides structural rigidity. The solar modules would be self-contained, durably constructed units designed to withstand exposure to the elements for a period of 35 years or greater. The solar modules deployed for use in the Project would be certified to comply with all industry standard quality testing. Modules would be electrically connected and grounded. The plant will be designed in accordance with local and state codes and regulations. The final panel selection would be determined prior to construction.

The Project would utilize a single-axis tracking system designed to optimize power production of the modules by ensuring proper orientation to the sun both daily and seasonally. Metal piers driven into the ground by a pile-driving machine support the single-axis tracking systems. Pier placement begins with a precise surveyed layout, ensuring proper positioning of remaining tracker assembly parts. Affixed to the top of each pier is a pier cap and bearing assembly that supports and allows proper movement of the torque tube assembly. Single-axis tracking systems require a drive system that provides directional force to the torque tube. This can be accomplished with either a mechanical or hydraulic drive arm and tube assembly that “pushes and pulls” the torque arm through its range of motion or by a geared assembly that redirects rotational force to the tubes. Both approaches require a small geared motor or hydraulic system mounted on a pile support or pad strong enough to move the system through its daily range of motions.

The trackers would be separated by distances to accommodate maintenance personnel and design parameters that meet applicable Fresno County fire safety requirements. Modules would be organized in rows in a uniform grid pattern, with each row separated by approximately 15–25 feet (from post to post).

SHEET NOTES

1. LOCATIONS SHOWN ARE FOR GENERAL GUIDANCE ONLY. SLOPES OF THE SITE ARE NOT DEPICTED AND LOCATIONS MUST BE VERIFIED ON SITE BEFORE INSTALLATION.
2. FINAL STRING SIZES TO BE CONFIRMED BY ENGINEER-OF-RECORD.

Figure 4: Project Site Layout

Figure 5. Typical Tracker Panel and Pier Design

5.1.3 Power Conditioning Stations (Inverters and Transformers)

Individual PV tracker panels would be connected together in series to create a “string” of trackers carrying DC electricity using a combiner box. Inverters in the power conditioning stations (PCS) convert the DC electricity produced by the trackers to AC electricity. The PCS transformers then step-up the AC electricity to the appropriate collection level voltage (34.5 kilovolt [kV]) for movement to the Project substation and eventual delivery to the electrical grid.

The Project will require approximately 62 PCS, depending on final design details. The number of trackers connected to each of the PCS varies with tracker output relative to inverter size and desired output from the PCS. The PCS would be placed strategically throughout the Project site and the inverters and transformers, as well as other electrical equipment that comprises each PCS, would be contained within electrical equipment enclosures.

The Project is proposing to use Power Electronics HEM 3430 inverters and transformers, or equivalent. Each inverter and transformer will be installed as per manufacturer’s requirements.

5.1.4 Substation

A substation located in the southwest corner of the Project area, adjacent to the ESS, would be constructed as part of the Project (as shown on the submitted Site Plan). The Project substation would include transformers, breakers, switches, meters, and related equipment. The overall footprint of the

Project substation is anticipated to be approximately 350 feet by 300 feet with transmission pole or gennie structures up to 150 feet in height. An emergency generator for use in the event that the regional transmission system fails would also be at the substation; this emergency generator would provide emergency power until the regional transmission system restores operations. The generator would be powered by propane or diesel and is estimated to be 49 kilowatts or less in size.

The Project substation may also contain a control room building approximately 40 feet by 40 feet with an overall height of less than 15 feet. The substation would be surrounded by an 8-foot barbed wire chain-link fence to comply with electrical codes. The control room may be outside the fenced area.

The substation must have access to communication systems in the area to comply with Federal Energy Regulatory Commission/California Independent System Operator utility monitoring and control requirements. Compliance may be accomplished by underground lines or aboveground lines.

5.1.5 Energy Storage System

ESS components are advantageous for renewable energy Projects because they allow energy to be reliably fed to the grid from an otherwise intermittent energy production source. The ESS is expected to be either located adjacent to the substation or distributed throughout the solar arrays at the inverter equipment pads or tracker rows. If batteries are located adjacent to the substation, they would be contained within steel enclosures similar to a refrigerator-sized cabinet. The color of the metal enclosure has not yet been determined; it typically varies by manufacturer. If distributed throughout the solar array, the ESS would likely be contained within metal housings and electrically connected to the inverters at each of the equipment pads.

Up to 4 acres may be utilized for the ESS. The key components of the ESS are described below.

- **Batteries.** Individual lithium ion cells form the core of the ESS. Cells are assembled either in series or parallel connection, in sealed battery modules. The battery modules would be installed in self-supporting racks electrically connected either in series or parallel to each other. The operating rack-level DC voltage currently ranges between 700 and 1,500 volts. The individual battery racks are connected in series or a parallel configuration to deliver the battery storage system energy and power rating.
- **Battery Storage System Enclosures and Controllers.** The battery storage system enclosures would house the batteries described above, as well as the battery storage system controllers. The battery storage system controller is a multilevel control system designed to provide a hierarchical system of controls for the battery modules, PCS, medium voltage system, and up to the point of connection with the electrical grid. The controllers ensure that the battery storage system effectively mimics conventional turbine generators when responding to grid emergency conditions. The battery storage system enclosure would also house required heating, ventilation, and air conditioning and fire protection systems.
- **DC/DC Converters.** In a DC-coupled system, the DC/DC converter allows the connection of the battery storage system to the DC side of the PV inverter. The DC/DC converter manages the battery and PV bus voltage and provides appropriate protections for the PV inverter.
- **PCS – Inverters.** The PCS consists of an inverter, protection equipment, circuit breakers, air filter equipment, equipment terminals, and cabling. Electricity is transferred from the PV array (or power grid) to the Project batteries during a battery charging cycle and from the Project batteries to the power grid during a battery discharge cycle. The inverter is bi-directional, with the ability to convert power from AC to DC when the energy is transferred from the grid to the battery and from DC to AC when the energy is transferred from the battery to the grid. The inverter DC operating voltage would be between 700 and 1,500 volts, with a typical power rating of approximately 3,000 kilowatts. The inverter AC operating voltage may be approximately 630 volts AC nominal. Voltage is increased to medium voltage levels (typically approximately 13–34.5 kV) when

combined with a medium voltage transformer. Voltage and power ratings are specific to the equipment manufacturer and product model. The installed equipment would be selected at a later date and therefore is subject to change.

- Medium Voltage Transformers. Separate medium voltage transformers may be present if not integrated into the inverter skids. These would be pad-mounted transformers used to increase voltage on the AC side of the inverters from low to medium voltage. Medium voltage transformers are used to increase the efficiency of power transmission, associated with reduced resistive power losses higher voltage.

5.1.6 PG&E Transmission Line

To interconnect the Luna Valley Solar Project to the PG&E Tranquillity Switching Station, PG&E would extend the footprint of the existing Tranquillity Switching Station north by approximately 100 feet and construct a new 230 kV transmission line that would extend from the Tranquillity Switching Station to a structure located on the Project property. The PG&E transmission line would include approximately 1,300 feet of 230 kV conductor strung on approximately four tubular steel poles of up to 140 feet in height. The PG&E transmission line would also include underground fiber optic line for communications. Energy from the Project solar arrays will be collected at the Project substation, described above, and transmitted to the PG&E-owned Tranquillity substation via PG&E transmission line, as shown on the submitted Site Plan.

5.1.7 Access Roads

Access to the Project area would be via main entrances along West Manning Avenue and Highway 33 (South Derrick Avenue). The Applicant plans to utilize existing interior access roads, however these roads may be improved with the addition of an aggregate base or other native material with a soil stabilization material, if necessary. Interior and perimeter access routes would be approximately 20 feet wide.

5.1.8 Perimeter Fencing

Chain-link fencing is proposed along the perimeter of the Project area. One foot of three-strand concertina wire may also be added to the perimeter fence if deemed necessary. Access gates would be provided at each site entry road.

5.1.9 Telecommunications

The Project would require connection with the existing local telecommunication service. A telecommunication line is comprised of fiber optic cable and/or 25-pair telephone line, which would be installed above and below ground, either attached to existing distribution lines or installed immediately adjacent to the Project substation. The telecommunication routes would use a combination of existing poles or new poles and below ground installations. Lines would be placed within utility franchise easements to the extent feasible. The Point of Interconnection to the existing telecommunication facilities would be in a small telephone/fiber optic vault. Interconnection to the Project would be within the Project substation. Below ground installations are usually installed 24–48 inches below grade. Aboveground lines are typically placed 6 feet below existing distribution lines or on new, adjacent wooden poles. Telecommunications may also be transmitted by a small wireless antenna, which would be placed at the Project substation.

5.1.10 Meteorological Data Collection System

The Project would require several meteorological data collection systems. The systems would include a variety of instruments to collect meteorological data, which would be mounted at various locations throughout the facility. The meteorological data would be collected at the level of the solar panels or approximately 10 feet above the ground.

5.1.11 Signage

Project signage is proposed to allow for the identification of the Project owner and for safety and security purposes. Signage is proposed to be installed on the fence or ground mounted in the vicinity of the main entry gates. Signage would identify the Project operator and owner and would provide emergency contact information. Small-scale signage would also be posted at the main entry gates and intermittently along the perimeter fencing on all exterior parcel boundaries, to indicate “No Trespassing” and “Private Property” for security purposes. All signage would conform to Fresno County signage requirements.

5.1.12 Lighting

Limited lighting is proposed on the Project site. Lighting would be used from dusk to dawn. Project lighting would be installed to allow for ongoing maintenance and security. Low-level lighting may be installed at entry and egress gates and at other strategic locations around the facility. Manually controlled lights would be installed at equipment pads and substations. All Project lighting would be shielded and directed downward to minimize the potential for glare or spillover onto adjacent ownerships. All lighting would conform to applicable Fresno County outdoor lighting codes.

5.1.13 Stormwater Facilities

The site drainage is designed to follow the natural drainage pattern, and none of the on-site facilities, including fences and panel posts, should prevent stormwater flow. Therefore, the Applicant anticipates that the Project would have very limited impact on site drainage. No on-site detention facilities are planned.

5.1.14 Other Infrastructure

O&M activities would take place in a new O&M building located near the southwest corner of the Project area (as shown on the submitted Site Plan). This building would be approximately 100 by 50 feet. Sanitary facilities for operations would be provided through the proposed O&M building to include a septic system or leach field. No additional wastewater or septic system facilities would be required. Water required during construction would be obtained from on-site wells or trucked in. Water requirements during operations would be negligible (that is, for occasional cleaning of solar panels).

5.1.15 Applicant-Proposed Best Management Practices

Various attributes and features of the Project serve to minimize negative effects on local land uses. These include the following.

- The Project would use solar panels that have a low profile (typically 6 feet high, but generally no more than 13 feet high at the highest point during the day) to minimize visual impacts. These solar panels are designed to be anti-reflective.
- Nighttime lighting impacts would be minimized by including only small lighting features that are equipped with on/off switches or motion detectors. The lighting impacts from such fixtures would be similar to those of domestic fixtures on local homes.

5.2 CONSTRUCTION

5.2.1 Site Preparation and Grading

Grubbing and grading would occur on the site to achieve the required surface conditions. Site preparation may include application of pre-emergent herbicides formulated to minimize impacts on wildlife. Application would be in accordance with federal, state, and County regulations and would be applied by a state-licensed pesticide applicator. Because the site is already mostly flat, grading would be minimal. The site's cut and fill would balance, and no importing or exporting of materials would be necessary.

After grading, temporary fences would be placed around the Project site, allowing materials and equipment to be securely stored on the site.

5.2.2 Construction Access Routes and Laydown Areas

Construction vehicles would access the Project site from Highway 33 or West Manning Avenue.

During construction, materials would be placed within the Project boundaries adjacent to the then-current phase of construction. To prevent theft and vandalism, materials would be secured within fenced areas at all times. A storage container might be used to house tools and other construction equipment. In addition, security guards would regularly monitor the site. Portable toilet facilities would be installed for use by construction workers. Waste disposal would occur in a permitted off-site facility. Domestic water for use by employees would be provided by the construction contractor through deliveries to the site.

5.3 CONSTRUCTION ACTIVITIES AND EQUIPMENT

The Applicant anticipates that construction would occur during a period of approximately 16 months. The on-site construction workforce would consist of laborers, craftspeople, supervisory personnel, and support personnel. The on-site assembly and construction workforce is expected to reach a peak of approximately 550 workers; the average number of workers on-site is anticipated to be approximately 150. On average, it is anticipated that 25 percent of worker trips to the site would be in carpools. Workers would commute to the site from nearby communities such as Mendota, Tranquillity, or San Joaquin, and some would travel from more-distant areas such as Fresno, Visalia, or Hanford. Construction would occur primarily during daylight hours. Workers would reach the site using existing roads.

Project construction would consist of two major stages. The first stage would include site preparation, grading, and preparing staging areas and on-site access routes, and the second stage would involve assembling the trackers and constructing electrical interconnection facilities.

Onsite roads would be constructed with a scarified and compacted subgrade and coated to create a dustless or durable surface or surfaced with compacted gravel. At the footing for the PCS pads, existing soil would be scarified and recompacted following recommendations of the geotechnical report.

Placing solar panels will require driving steel piles about 6 to 10 feet into the ground. In areas where geotechnical analysis has determined that piles might not be feasible or cost-effective, conventional foundations (such as isolated spread foundations or continuous footings) might be used.

During construction, a variety of equipment and vehicles would operate on the Project site. All equipment and vehicles would comply with the noise requirements of the Fresno County Noise Control Ordinance (Fresno County Code 8.40).

Water for dust control and other construction needs would come from on-site wells, an onsite municipal and industrial meter, or would be trucked to the site.

5.4 OPERATIONS

Once constructed, the Project would operate seven days per week and 365 days per year. The facility would be operated by Luna Valley Solar I, LLC or an affiliated company. Approximately four, permanent on-site staff are anticipated. Security would be maintained through installation of a chain-link fence, which would include one-foot of three-strand concertina wire along the perimeter of the site. Existing barbed wire fencing would be replaced with the Project perimeter fencing as needed. Infrared security cameras, motion detectors, and/or other similar technology may also be installed to allow for monitoring of the Project site through review of live, 24/7 footage. A security company may also be contracted by the Applicant for security purposes during construction and operation. Should the security system detect the

presence of unauthorized personnel, a security representative would be dispatched to the facility, and appropriate local authorities would be notified.

O&M of the Project would generate minimal noise, primarily from fans used to cool electrical equipment and transformers. Considering the distance to the nearest residence, it is not expected that fans or transformers would be audible from any residential area.

Only occasional, on-site maintenance is expected to be required following commissioning. Initially, personnel would likely visit the Project area daily or weekly, but it is anticipated that eventually maintenance visits would be reduced to once a month or less. O&M activities would require up to four workers performing visual inspections, monitoring plant performance, executing minor repairs, and responding to needs for plant adjustment. On intermittent occasions, the presence of 5 to 30 workers may be required for repairs or replacement of equipment, panel cleaning, and other specialized maintenance. However, due to the self-operating nature of the facilities, such actions would likely occur infrequently.

The expected maintenance would generate little traffic during operations. The areas surrounding the inverters and switchgear would be graveled and would have adequate space for parking several vehicles. O&M vehicles would include light duty trucks (e.g., pickup, flatbed) and other light equipment for maintenance and module washing. Heavy equipment would not be utilized during normal operation. Large or heavy equipment may be brought to the facility infrequently for equipment repair or replacement or vegetation control.

Minimal water would be required for panel washing activities and general maintenance. The need for panel washing would be infrequent (e.g., months to years between washings) and determined based on operating considerations, including actual soiling of the PV panels and any expected benefit from cleaning. Should cleaning be necessary, demineralized water would be sprayed on the PV panels to remove dust or a dry-cleaning method may be used.

Sanitary facilities for operations would be provided through the septic system at the proposed O&M building. Other wastes from equipment replacement or other work would be removed from the Site at the end of the day, or as needed.

Combustible vegetation or agricultural products on and around the Project boundary would be actively managed by the Project owner or its affiliates during both the construction and operation phases of the Project to minimize fire risk. Combustible products would be either limited in height or removed. Additionally, the Project would include firebreaks around the site boundary in the form of access roads subject to county standards.

5.5 DECOMMISSIONING

If operations at the site are terminated, the facility would be decommissioned. Most parts of the proposed system are recyclable. Panels typically consist of silicon, glass, and an aluminum frame. Tracking systems typically consist of steel and concrete, in addition to motors and control systems. All these materials can be recycled.

Numerous recyclers for the various materials to be used on the Project site operate in Fresno and other nearby counties. Metal, scrap equipment, and parts that do not have free-flowing oil can be sent for salvage. Equipment containing any free-flowing oil would be managed as waste and would require evaluation. Oil and lubricants removed from equipment would be managed as used oil, which is a hazardous waste in California. Decommissioning would comply with federal, state, county and other local standards and all regulations that exist when the Project is shut down.

6.0 ENVIRONMENTAL SETTING

6.1 REGIONAL CHARACTER

The Project site is located within the Central Valley region of Fresno County. The region consists of a single broad, flat valley, drained by the San Joaquin River and its tributaries, bound by the Sierra Nevada to the east and the Coast Range to the west. The elevation ranges from about 150 to 450 feet above sea level. Historically, the dominant habitat types were arid grasslands and shrub lands with expansive Valley Oak riparian woodlands and freshwater emergent wetlands in the proximity of water sources. Today, most of the land has been converted for agricultural uses.

The Project site is in an unincorporated area of Fresno County, 9 miles west-southwest of the city of Tranquillity. Land use in the area is mostly agricultural interspersed with sparse rural residential development and solar energy generation facilities that are currently operating or under development. The nearest rural residences are located approximately 0.28 mile from the southeast corner of the Project site along Highway 33, 1.28 miles north of the Project site at the northwest corner of Ohio Avenue and Adams Avenue, and 1.32 miles northeast of the Project site on Adams Avenue (Figure 6). The cities of Mendota and San Joaquin are approximately 10 miles north and east of Project site, respectively. The San Joaquin Airport is roughly 9.5 miles east.

Interstate 5 is the only major transportation route near the site. The Interstate runs north to south connecting southern California to northern California and the Pacific Northwest. It is paralleled to the east by the California Aqueduct. Near the site, the Interstate veers slightly south-southeast and thus is approximately 11 miles to the west as well as to the south of Project area. Most roadways in the immediate Project area vicinity are unimproved or paved without curb or sidewalk improvements.

6.2 LOCAL SETTING

The Project site is largely surrounded by existing agriculture, including non-irrigated fields owned mostly by Westlands and solar facilities (Figures 6 through 8). Currently, the Project site is used for dryland farming to grow livestock fodder such as alfalfa and some portions are now fallow.

In addition to the immediate agricultural use, the surrounding areas are mostly agricultural or undeveloped land with few residences. Several solar energy generation facilities are operating or under development in the immediate surrounding area, including the Tranquillity and Scarlet projects. Also nearby are Interstate 5, the California Aqueduct, the San Joaquin Airport, and the cities of Mendota, Tranquillity, and San Joaquin.

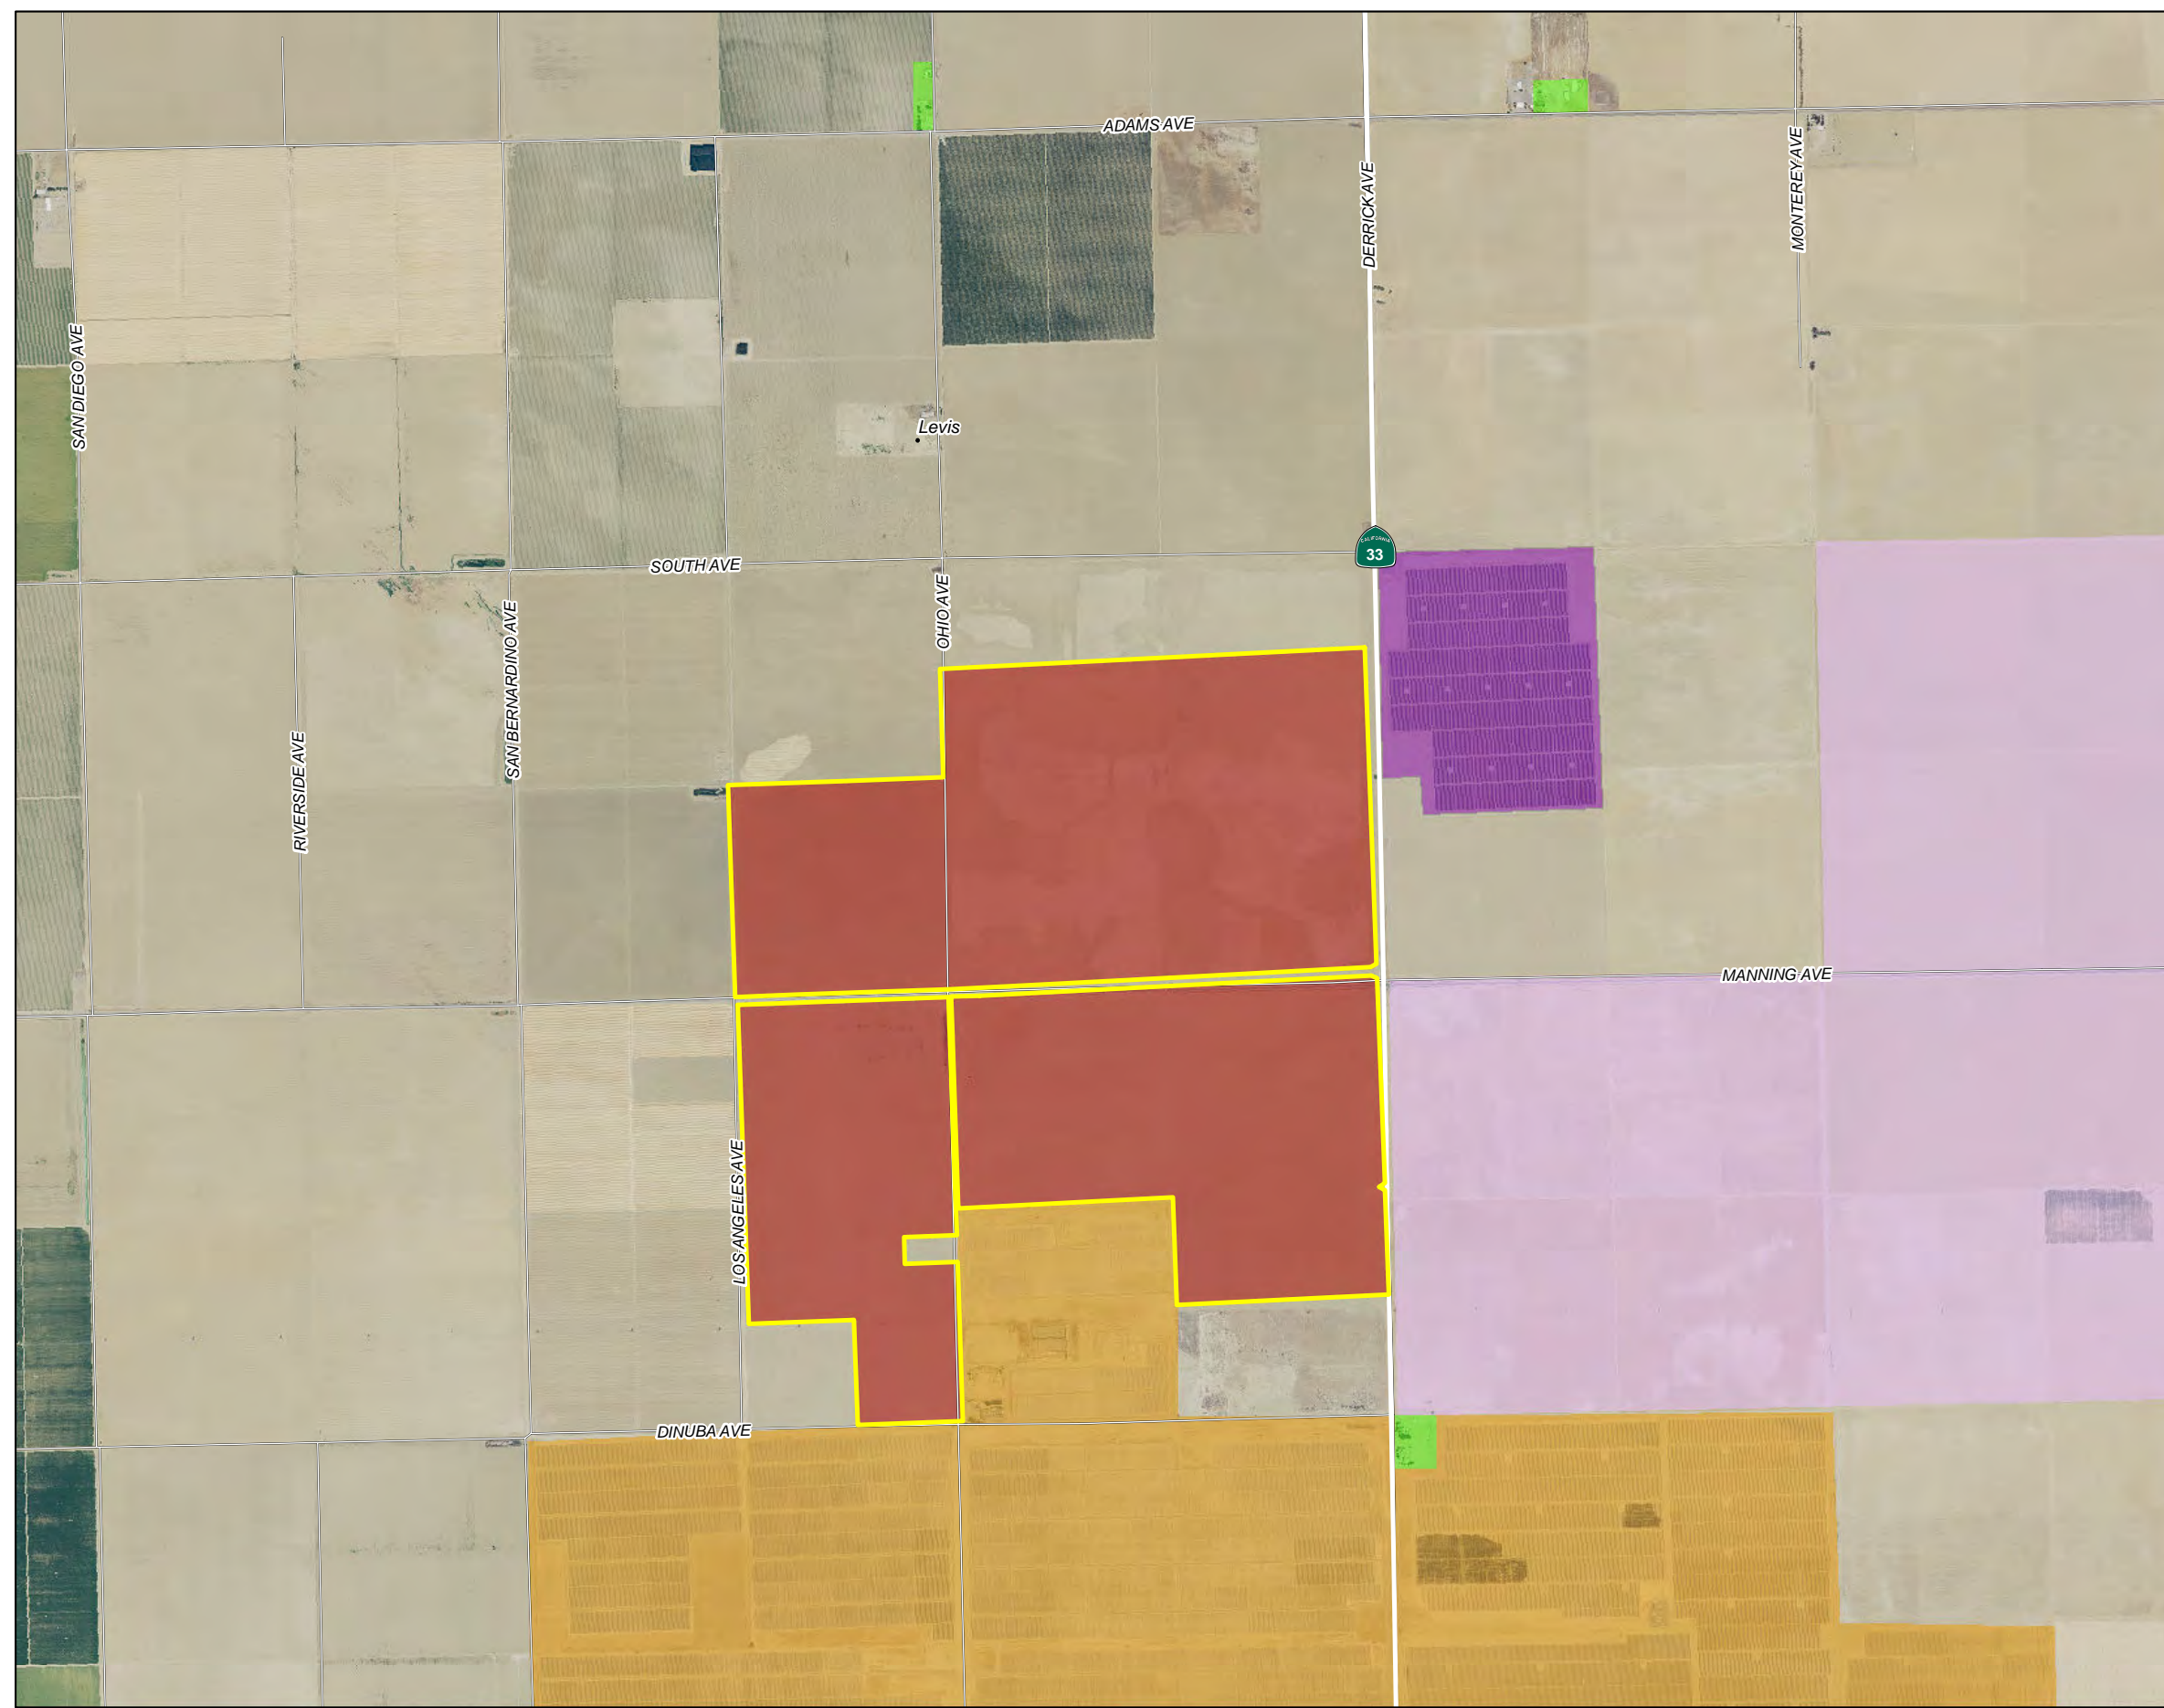

6.3 SCENIC ROUTES / VISTA POINTS

According to the California Department of Transportation (Caltrans) Scenic Highway System Lists, there is one officially designated state scenic highway and four eligible state scenic highways in Fresno County. None of these highways are in the vicinity of the Project site (Caltrans 2019). There are no Department of Transportation designated vista points on Interstate 5 within Fresno County (Caltrans 2018).

The Fresno County General Plan also includes policies intended to protect scenic resources along Fresno County roadways by identifying, developing, and maintaining scenic amenities along roads and highways in Fresno County and ensuring that development enhances those resources. According to Policy OS-L.1, Fresno County has designated a system of scenic roadways that includes landscaped drives, scenic drives, and scenic highways. According to this element, the only locally designated scenic highway in the vicinity of the Project site is Interstate 5 (Fresno County 2000).

6.4 EXISTING VISUAL CHARACTER

Three key observation points (KOPs) were selected to assess the level of visual change resulting from the Project as described in Section 5.0, Detailed Project Description, on the existing environment. The location of the three KOPs and site photograph locations are presented in Figure 9. The KOPs were selected to capture representative vantages from Highway 33, W. Manning Avenue, and a residence southeast of the Project site. Photographs from each KOP under both existing conditions and post-project simulation are presented in Figures 10 through 15, and discussed in Section 9.0, Impact Analysis, of this report.

6.4.1 Key Observation Point 1

KOP 1 is located at the southeast corner of Highway 33 and W. Dinuba Avenue. The existing visual setting of this location is characterized by generally flat terrain, a residential structure and agricultural related structures, agricultural fields, overhead utility distribution lines, and high-voltage transmission lines and towers, and solar energy generation facilities (Figure 10).

This KOP depicts views oriented northwest toward the Project site (Figure 9). Views from this KOP under both existing conditions and post-project simulation are presented in Figure 11. As shown in Figure 11, views of paved Highway 33, agricultural fields and local electrical distribution lines are visible in the foreground. High-voltage transmission lines and towers and fencing are visible in the middle-ground. The Project site, currently consisting of agricultural fields, is visible in the foreground and middle-ground. The foothills of the Diablo Mountains are visible in the background.

The scenic attractiveness of KOP 1 is typical for the region and the landscape lacks a distinct form and topographical contrast in the foreground and middle-ground. This landscape view is common in the area but retains a relative feeling of openness. The scenic quality of KOP 1 is identified as low (Class IV) as visual encroachments including road infrastructure, overhead utility distribution lines, and high-voltage transmission lines and towers distributed throughout the landscape. This KOP provides a typical view for drivers traveling northbound along Highway 33, likely traveling at a high rate of speed based on the posted speed limit of 55 miles per hour. Considering the short duration of viewing, viewers would have a low viewer sensitivity to the visual changes in the area. This KOP also provides a typical view for the occupants of the residence at the southeast corner of Highway 33 and W. Dinuba Avenue. Considering the frequent viewing by local residents, viewers would have a moderate sensitivity to the visual changes in the area.

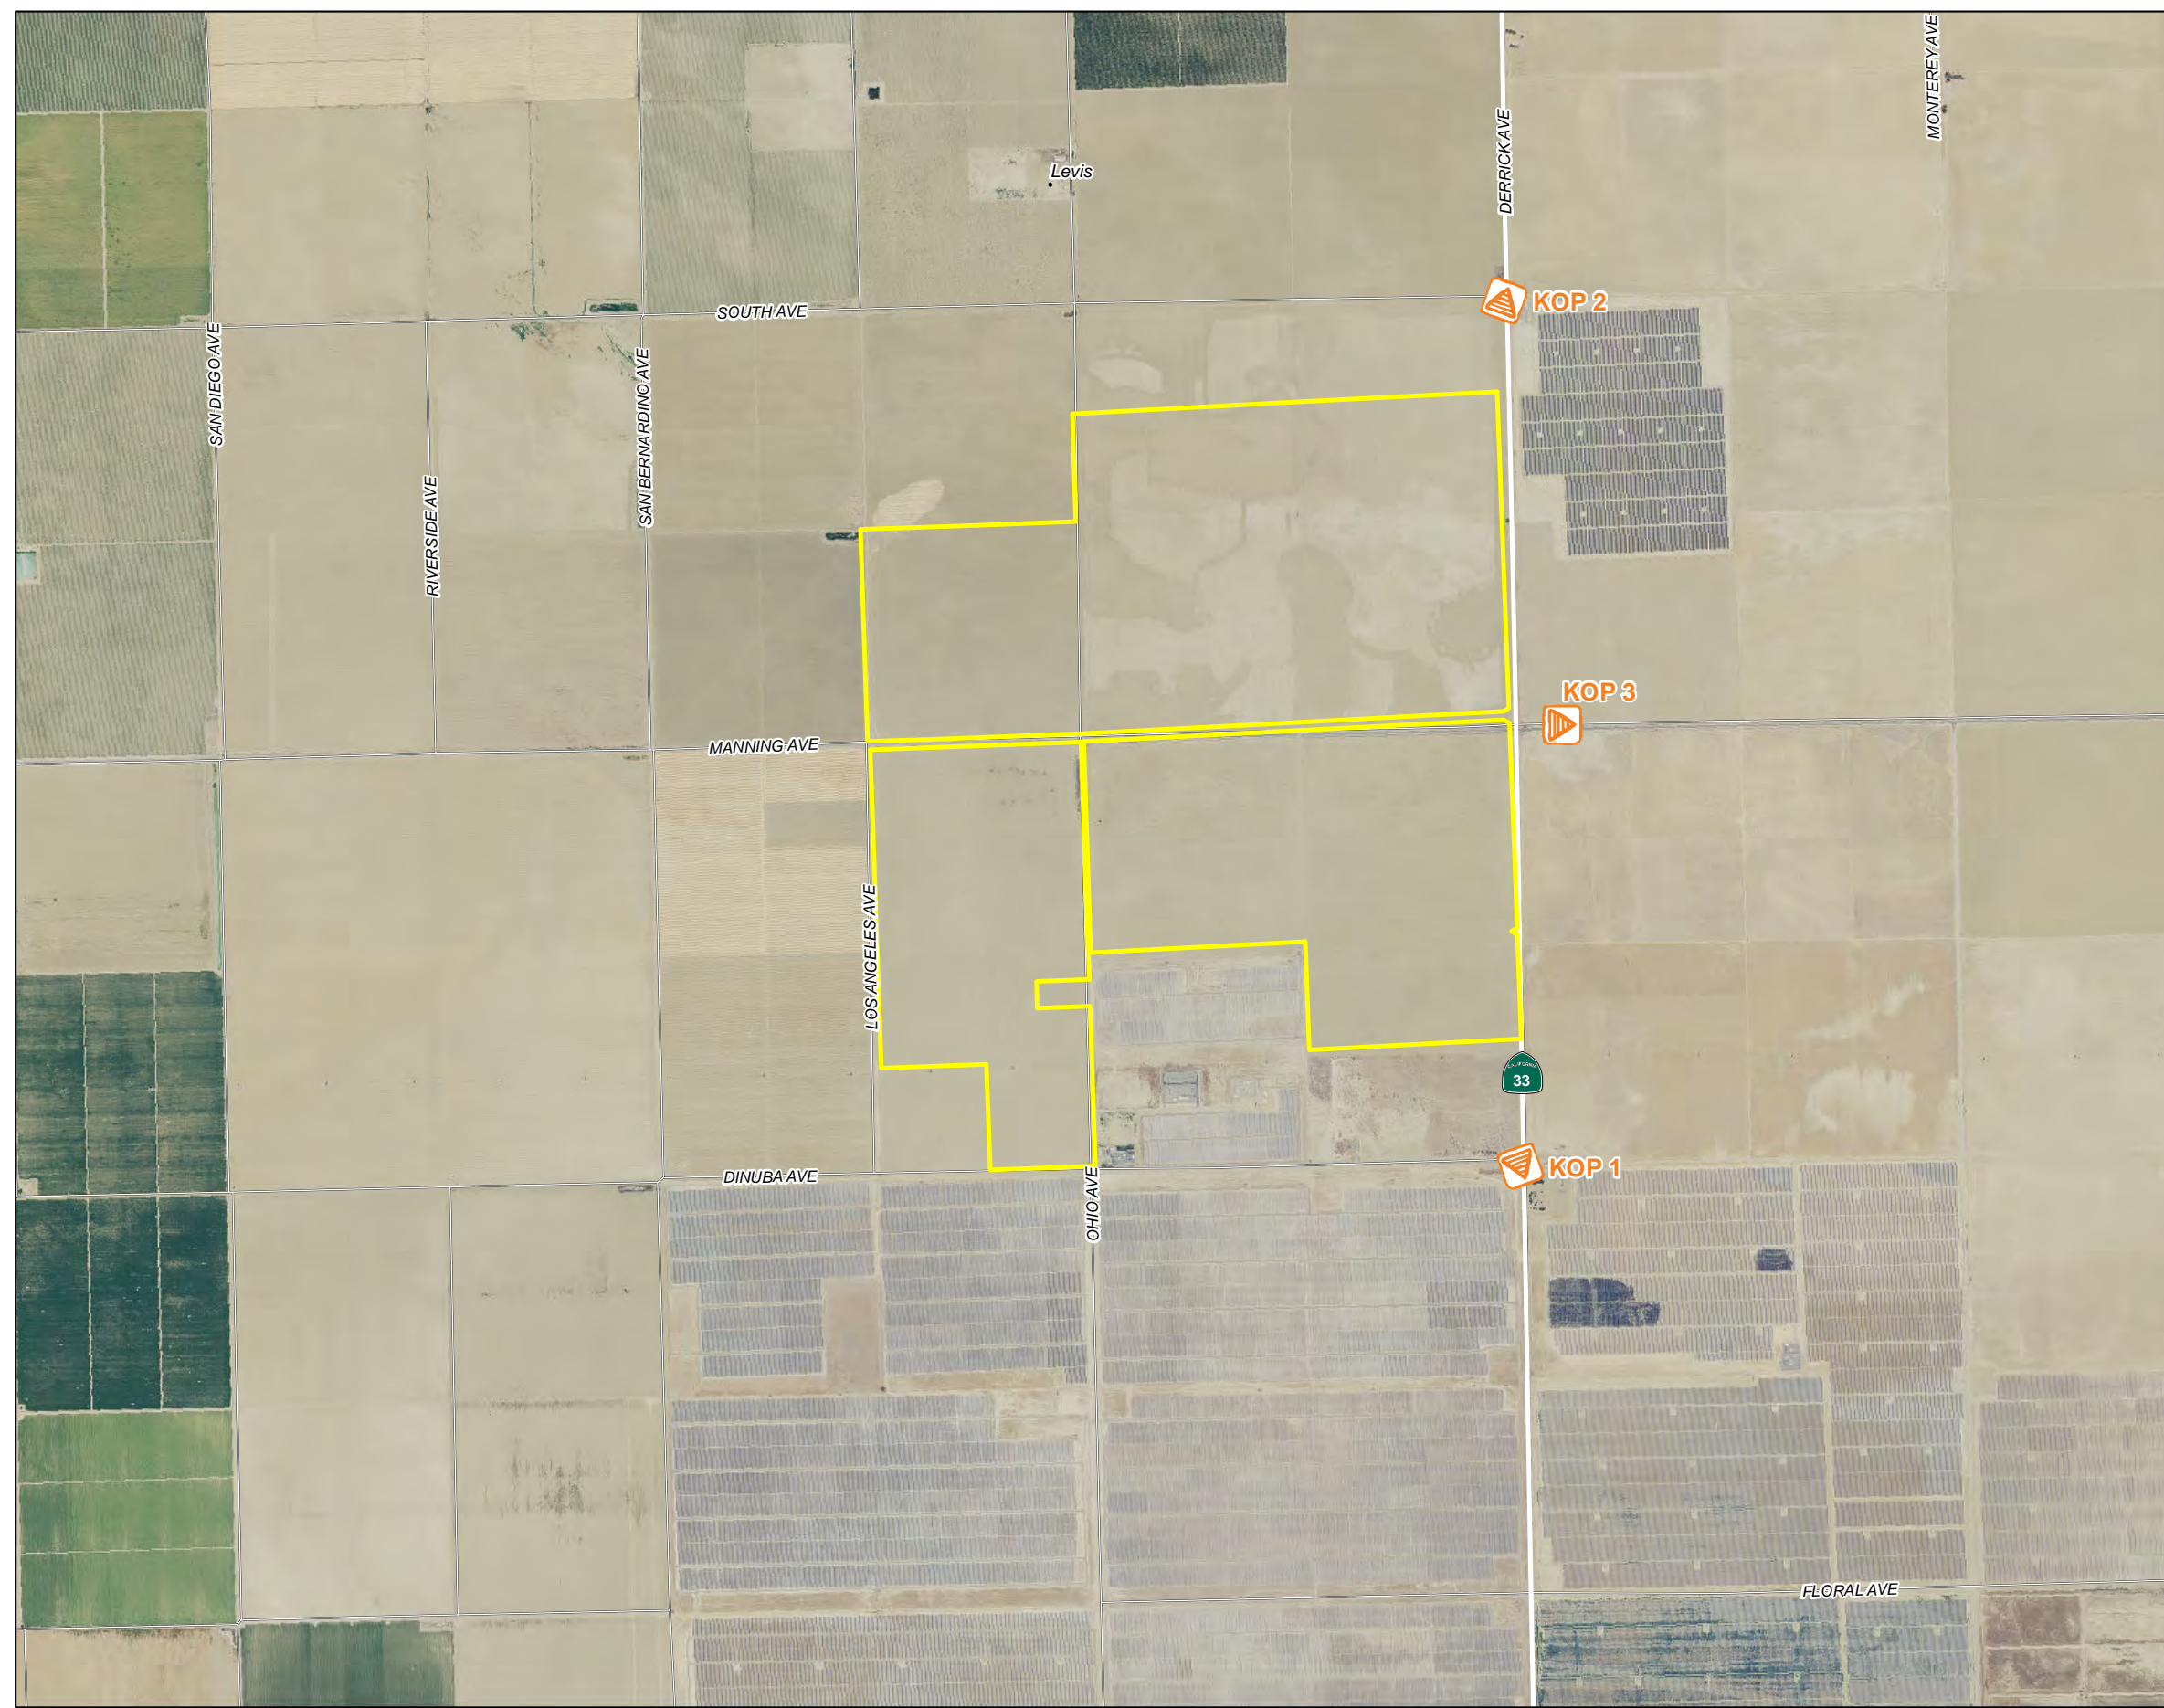

6.4.2 Key Observation Point 2

KOP 2 is located north of the Project site at the northeast corner of Highway 33 and W. South Avenue. The existing visual setting of this location is characterized by generally flat terrain, agricultural fields, overhead utility distribution lines, and high-voltage transmission lines and towers, and solar energy generation facilities (Figure 12).

This KOP depicts views oriented southwest toward the Project site (Figure 9). As shown in Figure 13, views of paved Highway 33, an unpaved road (W. South Avenue), utility poles, and agricultural fields are available in the foreground. The Project site, currently consisting of agricultural fields, is visible in the foreground and middle-ground. Large transmission towers and solar energy generation facilities are visible in the middle-ground. The Diablo Mountains are visible in the background.

This KOP provides a typical view for drivers traveling southbound along Highway 33, likely traveling at a high rate of speed based on the posted speed limit. Considering the short duration of viewing, viewers would have a low viewer sensitivity to the visual changes in the area.

6.4.3 Key Observation Point 3

KOP 3 is located east of the Project site and Highway 33 on W. Manning Avenue, looking west. The existing visual setting of this location is characterized by generally flat terrain, agricultural fields, overhead utility distribution lines, and high-voltage transmission lines and towers, and solar energy generation facilities (Figure 14).

This KOP depicts views oriented west toward the Project site (see Figure 9). As shown in Figure 15, views of paved W. Manning Avenue, paved Highway 33, utility poles, streetlight poles, and agricultural fields are available in the foreground. The Project site, currently consisting of agricultural fields, is visible in the foreground and middle-ground. The Diablo Mountains are visible in the background.

The scenic attractiveness of KOP 3 is typical for the region and the landscape lacks a distinct form and topographical contrast in the foreground and middle-ground. This landscape view is common in the area but retains a distinctive background with topographical features of the Diablo Mountains to the west and a relative feeling of openness. The scenic quality of KOP 3 is identified as low (Class IV) as visual encroachments include road infrastructure and overhead utility distribution lines. This KOP provides a typical view for drivers traveling west on W. Manning Avenue, likely traveling at a high rate of speed based on the posted speed limit. Considering the short duration of viewing, viewers would have a low viewer sensitivity to the visual changes in the area.

6.4.4 Light, Glint, and Glare

Existing sources of light in the Project area are limited to outdoor lighting sources, such as street lights from cities of Tranquillity, San Joaquin, and Mendota, structural lighting at scattered residential locations, and security lighting from adjacent solar energy generation facilities. Mobile sources of light and glare originate from automobile traffic on surrounding roadways. The rural residential structures located near the Project site, the adjacent solar energy generation facilities, and the occasional street lights along Highway 33, combined with automobile traffic on W. Manning Avenue, Highway 33 (S. Derrick Avenue), S. Bernardino Avenue, W. Dinuba Avenue, and S. Ohio Avenue, are the primary sources of nighttime lighting adjacent to the Project site.

Glare is considered a continuous source of brightness, relative to diffused light, whereas glint is a direct redirection of the sunbeam in the surface of a PV solar module. Glint is highly directional, since its origin is purely reflective, whereas glare is the reflection of diffuse irradiance; it is not a direct reflection of the sun. Sources of glare in the Project area include windows and reflective building materials such as metal roofs. Solar panels associated with adjacent solar energy generation facilities create little, if any glint or glare, due to the application of anti-reflective coatings and use of modern glass technology. Noticeable glare from the existing solar panels was not observed during the May 28, June 23, and June 24, 2020 field visits.

7.0 REGULATORY SETTING

7.1 FEDERAL

7.1.1 National Scenic Byways Program

The National Scenic Byways Program, a part of the Federal Highway Administration, recognizes, preserves, and enhances selected roads throughout the United States as All-American Roads or National Scenic Byways based on one or more archaeological, cultural, historic, natural, recreational, and scenic qualities. According to the Federal Highway Administration's America's Byways website, there are no officially designated National Scenic Byways in the vicinity of the Project site (FHWA 2020).

7.2 STATE

7.2.1 Caltrans Scenic Highway Program

State scenic highways are those that are either officially designated as state scenic highways by the Caltrans or are eligible for such designation. The scenic designation is based on the amount of natural landscape visible by motorists, the scenic quality of the landscape, and the extent to which development intrudes on the motorist's enjoyment of the view. There are no officially designated or eligible state scenic highways in the vicinity of the Project site (Caltrans 2019).

7.3 LOCAL

7.3.1 County of Fresno

Relevant policies from the County of Fresno General Plan are summarized below by element/section (Fresno County 2000).

Open Space and Conservation Element

K. Scenic Resources

Goal OS-K To conserve, protect, and maintain the scenic quality of Fresno County and discourage development that degrades areas of scenic quality.

Policy OS-K.1 The County shall encourage the preservation of outstanding scenic views, panoramas, and vistas wherever possible. Methods to achieve this may include encouraging private property owners to enter into open space easements for designated scenic areas.

Policy OS-K.4 The County should require development adjacent to scenic areas, vistas, and roadways to incorporate natural features of the site and be developed to minimize impacts to the scenic qualities of the site.

L. Scenic Roadways

Goal OS-L To conserve, protect, and maintain the scenic quality of land and landscape adjacent to scenic roads in Fresno County.

Policy OS-L.1 The County designates a system of scenic roadways that includes landscaped drives, scenic drives, and scenic highways. Definitions and designated roadways are shown in the text box below. Figure OS-2 shows the locations of the designated roadways.

Policy OS-L.3 The County shall manage the use of land adjacent to scenic drives and scenic highways based on the following principles:

- b. Proposed high voltage overhead transmission lines, transmission line towers, and cell towers shall be routed and placed to minimize detrimental effects on scenic amenities visible from the right-of-way.

8.0 THRESHOLDS OF SIGNIFICANCE/CRITERIA

For this analysis, the significance criteria outlined in Appendix G of the CEQA Guidelines, as amended, are applied to determine the Project's impact to existing visual resources. The CEQA-defined aesthetic issues of concern are:

- Would the proposed Project cause substantial, adverse effects on a scenic vista?
- Would the proposed Project cause substantial damage to scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings, within a state scenic highway?
- In non-urbanized areas, would the proposed Project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.)
- Would the proposed Project create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

8.1 METHODOLOGY

8.1.1 Viewshed

The viewshed is generally the area that is visible from an observer's viewpoint and includes the screening effects of intervening vegetation and/or physical structures. Although some portion of the Project site may be visible from a relatively large area, the degree of visibility would depend on distance and view angle. Generally, the Project site would be most visible from viewpoints within 1 mile, while site visibility would diminish as distance increases and view angle decreases. Air quality, including dust and other visible particulates, can affect visibility in the area.

8.1.2 Key Observation Points

Three KOPs were selected as representative vantage points in the landscape that offer motorists traveling on area roadways and local residents' views of the proposed Project site. KOPs 1 through 3 are shown on Figures 11, 13, and 15.

Factors considered in the selection of KOPs included locations with sensitive viewers (e.g., local residence, Highway 33) and potential for the Project site to be visible (e.g., distance and view angle). The KOPs were selected to capture representative vantages from north bound Highway 33 and a residence south of the Project site, south bound Highway 33, and west bound W. Manning Avenue.

Digital photographs were taken from the selected KOP locations to support the discussion on existing visual setting and the analysis of potential visual impacts associated with the proposed Project. Photographs of existing conditions were taken in May 28, June 23, and June 24, 2020 using a digital single-lens reflex Canon 5D Mark III camera.

8.1.3 Visual Simulations

Three-dimensional visual simulations from each KOP were rendered to approximate the visual conditions resulting with project implementation. Using the photographs acquired at KOP 1 through KOP 3, a three-dimensional physical massing model was created that incorporated the PV scale model, placed in array configurations as shown in the site plan provided in Figure 4, Project Site Layout (see Section 5.0, Detailed Project Description). The model was then georeferenced and placed on global positioning system-controlled site-specific photographs to create simulations that demonstrate visual changes from the Project. Figures 11, 13, and 15 provide simulated views of Project features.

8.1.4 Visual Change Analysis

The Project will be developed on private property within an unincorporated area of Fresno County. In order to describe the existing visual character and analysis potential visual impacts associated with the Project, this visual impact assessment will follow the U.S. Bureau of Land Management (BLM) Visual Resources Management (VRM) system. The BLM uses the VRM system to identify, set, and maintain scenic values for land areas under its management. The VRM system has two key aspects: inventorying visual resources and managing those resources (BLM 1986).

BLM's Visual Resource Inventory (VRI) classification system is a baseline description of the existing scenic values in the environment and, unlike VRM classifications, does not provide objectives as to how the land should be used or managed. The VRI developed by BLM identifies the visual resources of a given area and, based upon specific standards, assigns an inventory class to each area. This process, further described in detail in BLM Manual H-8410-1 (BLM 1986), involves rating the resource's visual qualities, measuring public concern, and determining the extent to which an area is visible from travel routes and other observation points. Those three factors then determine which of the four VRI classes are assigned to each area of BLM-administered lands based on visual sensitivity level (high, medium, and low), scenic quality, and distance. These four VRI classes represent the relative values of the existing visual resources. VRI Classes I and II represent the highest visual value, Class III represents moderate value, and Class IV represents relatively low visual value.

Specific terminology used in describing the existing visual environment is provided below.

- Contrast. Opposition or unlikeness of different forms, lines, colors, or textures in a landscape. Contrast rating: a method of analyzing the potential visual impacts of proposed management activities.
- Form. The mass or shape of an object or objects that appears unified, such as a vegetative opening in a forest, a cliff or mountain formation, a water tank, or a highway overpass.
- KOP. One or a series of points on a travel route or at a use area or potential use area, where the view of a management activity would be most revealing.
- Landscape Visibility. Perception of details (e.g., form, line, color, and texture) diminishes with increasing distance. The distance zone is dependent on the location of the observer relative to the Project. These distance zones are (BLM 1986):
 - Foreground and middle ground: 0 to 5 miles from point of interest
 - Background: remaining area up to 15 miles away from the point of interest
 - Seldom seen: over 15 miles from the point of interest
- Scenic quality is a measure of the visual appeal of a tract of land. In the visual resource inventory process, the apparent scenic quality is determined using seven key factors: landform, vegetation, water, color, adjacent scenery, scarcity, and cultural modifications.
- Sensitivity level. Sensitivity levels are a measure of public concern for scenic quality. Public lands are assigned high, medium, or low sensitivity levels by analyzing the various indicators of public concern.
- Simulation. A realistic visual portrayal that demonstrates the perceivable changes in landscape features caused by a proposed management activity. This is done using photography, artwork, computer graphics, and other such techniques.

- **Texture.** The visual manifestations of the interplay of light and shadow created by the variations in the surface of an object or landscape.
- **Viewshed.** A landscape unit seen from a KOP.
- **Visual quality.** The relative worth of a landscape from a visual perception point of view.
- **Visual resource.** The visible physical features on a landscape (for example, land, water, vegetation, animals, structures, and other features).

Scenic quality is a measure of the visual appeal of a tract of land. The apparent scenic quality of the land is determined using seven key factors: landform, vegetation, water, color, adjacent scenery, scarcity, and cultural modifications. During the rating process, each of these factors are ranked on a comparative basis with similar features within the project area. The BLM VRM approach allows the various landscape elements that comprise visual quality to be quantified and rated with a minimum of ambiguity or subjectivity, which can be easily understood and compared by the reader.

According to this method, visual quality is rated according to the presence and characteristics of seven key components of the landscape. These components include landform, vegetation, water, color, adjacent scenery, scarcity and cultural modifications, defined as follows:

1. The **landform** component of the visual quality rating criteria takes into account the fact that topography becomes more interesting visually as it gets steeper or more massive, or more severely or universally sculptured. Outstanding landforms may be monumental (as found in Yosemite Valley), or they may be exceedingly artistic and subtle (such as certain ridgelines, pinnacles, peaks, and other extraordinary formations).
2. The **vegetation** component of the rating criteria gives primary consideration to the variety of patterns, forms, and textures created by plant life. Short-lived displays are given consideration when they are known to be recurring or spectacular. Consideration also is given to smaller scale vegetational features that add striking and intriguing detail elements to the landscape (e.g., hedgerows or trees, native grasses, etc.).
3. The **water** component of the rating criteria recognizes that visual quality is largely tied to the presence of water in scenery, as it is that ingredient which adds movement or serenity to a scene. The degree to which water dominates the scene is the primary consideration in selecting the rating score for the water component.
4. The **color** component of the visual quality rating criteria considers the overall color(s) of the basic components of the landscape (e.g., soil, rock, vegetation, etc.). Key factors that are used when rating the color of scenery are variety, contrast, and harmony.
5. The **adjacent scenery** component of the rating criteria takes into account the degree to which scenery outside the view being rated enhances the overall impression of the scenery under evaluation. The distance of influence for adjacent scenery normally ranges from 0 to 5 miles, depending upon the characteristics of the topography, the vegetation cover, and other such factors. This factor generally is applied to views that normally would rate very low in score, but the influence of the adjacent high visual quality would enhance the visual quality and raise the score.
6. The **scarcity** component of the visual quality rating criteria provides an opportunity to give added importance to one or all of the scenic features that appear to be relatively unique or rare within a region. There may also be cases where a separate evaluation of each of the key factors does not give a true picture of the overall scenic quality of an area. Often, it is a number of not so spectacular elements in the proper combination that produces the most pleasing and memorable

scenery – the scarcity factor can be used to recognize this type of area and give it the added emphasis it should have.

- The **cultural modifications** component of the visual quality rating criteria takes into account any man-made modifications to the landform, water, vegetation, and/or the addition of man-made structures. Depending on their character, these cultural modifications may detract from the scenery in the form of a negative intrusion or they may complement and improve the scenic quality of a view.

Based on the criteria above, views are rated numerically and a total score of visual quality can be tabulated. Table 2 summarizes the point associated with the various criteria. Based on this rating system, there are a total of 32 points possible. Views that score a total of 19 points or more are typically considered very high in visual quality (Class I). Views that score a total of 15 to 19 points typically are considered to have a high level of visual quality (Class II). Views that score a total of 12 to 15 points typically are considered to have an above average level of visual quality (Class III). Finally, views that score a total of 11 points or less typically are considered to have average or lower visual quality (Class IV). Table 2 summarizes the point associated with the various criteria.

Using the criteria below, the visual quality of the existing visual conditions and the post-project (“simulated” condition) visual conditions will be rated. The scores will determine the Project site’s existing visual class and evaluate whether the Project will result in a lower visual class and the degree of change between the existing and post-project visual conditions.

Table 2. Visual Quality Rating System - Scenic Quality Inventory and Evaluation Chart

Key Factors	Rating Criteria and Score		
Landform	High vertical relief as expressed in prominent cliffs, spires, or massive rock outcrops, or severe surface variation or highly eroded formations including major badlands or dune systems; or detail features dominant and exceptionally striking and intriguing such as glaciers. Score 5	Steep canyons, mesas, buttes, cinder cones, and drumlins; or interesting erosional patterns or variety in size and shape of landforms; or detail features which are interesting though not dominant or exceptional. Score 3	Low rolling hills, foothills, or flat valley bottoms; or few or no interesting landscape features. Score 1
Vegetation	A variety of vegetative types as expressed in interesting forms, textures, and patterns. Score 5	Some variety of vegetation, but only one or two major types Score 3	Little or no variety or contrast in vegetation. Score 1
Water	Clear and clean appearing, still, or cascading white water, any of which are a dominant factor in the landscape. Score 5	Flowing, or still, but not dominant in the landscape. Score 3	Absent, or present, but not noticeable. Score 0
Color	Rich color combinations, variety or vivid color; or pleasing contrasts in the soil, rock, vegetation, water or snow fields. Score 5	Some intensity or variety in colors and contrast of the soil, rock and vegetation, but not a dominant scenic element. Score 3	Subtle color variations, contrast, or interest; generally mute tones. Score 1
Influence of adjacent scenery	Adjacent scenery greatly enhances visual quality Score 5	Adjacent scenery moderately enhances overall visual quality. Score 3	Adjacent scenery has little or no influence on overall visual quality. Score 0

Key Factors	Rating Criteria and Score		
Scarcity	One of a kind; or unusually memorable, or very rare within region. Consistent chance for exceptional wildlife or wildflower viewing, etc. *Score 5+	Distinctive, though somewhat similar to others within the region. Score 3	Interesting within its setting, but fairly common within the region. Score 1
Cultural modifications	Modifications add favorably to visual variety while promoting visual harmony. Score 2	Modifications add little or no visual variety to the area, and introduce no discordant elements Score 0	Modifications add variety but are very discordant and promote strong disharmony. Score -4

* A rating of greater than 5 can be given but must be supported by written justification.

Source: BLM Manual H-Visual Resources Inventory, 1/17/86

The Project will also be evaluated as to the level of contrast Project elements exhibit to the existing visual character of the Project site and area.

Table 3. Degree of Contrast Rating System

Degree of Contrast	Rating Criteria
None	The element contrast is not visible or perceived.
Weak	The element contrast can be seen but does not attract attention.
Moderate	The element contrast begins to attract attention and begins to dominate the characteristic landscape.
Strong	The element contrast demands attention, will not be overlooked, and is dominant in the landscape.

Source: BLM Manual H-Visual Resources Inventory, 1/17/86

In general, adverse visual impacts are likely to occur when a project results in: a change in visual class and/or a significant change in visual quality ratings; introduces a high level of contrast to the existing visual character of the project site and area; the sensitivity of the viewers; and the visibility of the site.

9.0 IMPACT ANALYSIS

9.1 SCENIC VISTAS

Would the proposed Project cause substantial, adverse effects on a scenic vista?

No designated scenic vistas are located within visible distance of the Project site. The Project site includes existing and previously farmed land and is surrounded by rural and solar energy generation land uses and transportation and utility infrastructure. The Project area is not a scenic vista or visible from any designated scenic vista. No impact on scenic vistas would occur.

Level of Significance: No impact.

9.2 SCENIC HIGHWAYS

Would the proposed Project cause substantial damage to scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings, within a state scenic highway?

There are no officially designated or eligible state scenic highways in the vicinity of the Project site. The Fresno County General Plan identifies Interstate 5 as a locally designated scenic highway.

The Project site includes existing and previously farmed land and is surrounded by rural and solar energy generation land uses and transportation and utility infrastructure. The location of the Project site is shown in Figure 16. This photograph provides a typical view for drivers traveling along Interstate 5, likely traveling at a high rate of speed based on the posted speed limit of 65 miles per hour.

The proposed Project would convert active and fallow agricultural land that contributes to the scenic qualities of views. From Interstate 5, the solar arrays would be barely visible in the background view. The solar panels and related fencing would be barely discernable and would blend into the agricultural land use pattern at this distance. The Project's gen-tie line pole followed by the substation and battery storage buildings would be the tallest of the Project's features in this view, though they would be smaller and less noticeable than the existing power line corridor. With the rate of travel along Interstate 5, the lack of visibility or visual contrast, it is unlikely that travelers along Interstate 5 would notice the Project.

Based on these considerations, including the low profile of the Project facilities combined with the various existing visual encroachments in surrounding areas, the Project would not result in a substantial damage to scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway. For these reasons, no impact would result.

Level of Significance: No impact.

9.3 VISUAL CHARACTER

In non-urbanized areas, would the proposed Project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point).

Existing views and the analysis of visual change are described below. The location and view direction of KOP photographs are shown on Figure 9. Existing and simulated KOP figures are provided in Figures 11, 13, and 15.

Luna Valley Solar
Fresno County, CA

Figure 16
Views of Project Site from I-5

Photo 11

Photo 12

Photo 11 – View of Project site from Kamm Avenue / I-5 overpass
Photo 12 – View of Project site from Manning Avenue / I-5 overpass

The Project site is rural in character with a wide variety of visual encroachments, including scattered ranch structures, local electrical distribution lines and high-voltage transmission lines, roadways, and solar facilities. The Project site is located in an area that has been subjected to significant alteration due to prior agricultural uses and solar facilities development. KOPs 1 through 3 provide representative views of the Project site's visual character and adjacent surroundings.

9.3.1 Construction

The proposed Project would involve both temporary and permanent changes to the visual character of the site. Temporary changes are associated with construction activities, including construction equipment, staging, and Site construction. These visual impacts would be short-term in nature and are not considered to be significant.

9.3.2 Operation

9.3.2.1 KOP 1

KOP 1 represents a view of the proposed Project from the southeast corner of Highway 33 and W. Dinuba Avenue, oriented northwest. This KOP reflects the views of northbound motorists on Highway 33 and of the occupants of the residence at the southeast corner of Highway 33 and W. Dinuba Avenue.

As shown in Figure 11, under existing conditions, agricultural fields and local electrical distribution lines are visible in the foreground. High-voltage transmission lines and towers and fencing, orchards, and vineyards are visible in the middle-ground. As shown in the simulation, the Project's solar panels would be visible and would transform part of the foreground from an agricultural visual character to an industrial character. The foothills of the Diablo Mountains would continue to be visible in the background, similar to existing conditions. An analysis of potential visual impacts is summarized in Table 4.

Table 4. Visual Quality Rating Analysis – KOP 1

Rated Feature	Pre-Development Score	Post-Development Score	Difference in Scores
Landform	2	2	0
Explanation	Project site and surrounding land are flat. Foothills are visible in the background.	Post-development the Project site would remain flat. Foothills would remain visible in the background.	
Detail	In the views of both existing and simulated conditions, the flat landforms in the foreground and middle-ground are predominate with views of the foothills are visible in the background. With no substantial change to the landforms on the Project site, no significant impact to landforms would result from Project implementation.		
Vegetation	1	1	0
Explanation	Little variation in low-lying agricultural crops.	Vegetation on the Project site would be removed.	
Detail	Both the existing and simulated view show little contrast in vegetation. Agricultural vegetation would remain in the foreground. Loss of views of low criteria rated vegetation would be a less than significant impact.		
Water	0	0	0
Explanation	No water is present on the Project site or in the Project area.	The Project would not introduce water to the Project site.	
Detail	Neither existing nor simulated views include any water features.		

Rated Feature	Pre-Development Score	Post-Development Score	Difference in Scores
Color	1	1	0
Explanation	Muted color with little variation: tans in the foreground associated with agricultural fields; dark colors associated with existing orchards and vineyards in the middle-ground.	Muted color with little variation: tans in the foreground associated with agricultural fields would remain in the foreground; dark colors would appear closer in the middle-ground.	
Detail	Predominate colors from this viewpoint are associated agricultural fields and existing fencing. The Project would increase the amount of dark color, however, loss of views of low criteria rated color would be a less than significant impact.		
Adjacent Scenery	2	2	0
Explanation	Adjacent scenery provides views of agricultural vegetation. Foothills are visible in the background.	Adjacent scenery would remain visible and foothills would remain visible in the background.	
Detail	Adjacent scenery consists of flat lands with agricultural fields. The Project would replace views of agricultural fields on the Project site with solar facilities, however, foothills would still be visible.		
Scarcity	1	1	0
Explanation	Similar viewsheds throughout the region. No unique or unusual aspects.	Views of agricultural fields would be decreased and views of solar facilities would be increased.	
Detail	Existing views of agricultural fields and solar facilities are typical of the San Joaquin Valley and are not unique or unusual.		
Cultural Modifications	-1	-2	1
Explanation	Manmade modifications in this view include utility and transmission lines and structures and fencing in the middle-ground. These features are somewhat discordant with the surrounding landscape.	The Project would increase manmade modifications in this view with the introduction of solar facilities that would replace the open agricultural space.	
Detail	The existing view exhibits manmade modifications to the landscape of open agricultural space. The Project would introduce views of solar facilities in the foreground, primarily of solar panels. The Project would be discordant with the foreground landscape but due to the other solar facilities in the immediate area would not be an unexpected modification.		
Totals	6	5	1

The scenic quality of KOP 1, both under existing conditions and post development of the Project, is identified as low (Class IV). Visual encroachments including road infrastructure, overhead utility distribution lines, and fencing are distributed throughout the landscape. The Project would increase the visual encroachments and decrease the amount of agriculture open space. Drivers traveling northbound along Highway 33, would have a short duration of viewing the Project site and are expected to have a low viewer sensitivity to the visual changes on the Project site. Occupants of the residence at the southeast corner of Highway 33 and W. Dinuba Avenue would be expected to be more sensitive to the visual changes on the Project site. However, views of solar facilities are not unexpected in the immediate vicinity

and views of agriculture open space would remain in the foreground. Therefore, the impacts would be less than significant.

9.3.2.2 KOP 2

KOP 2 represents a view of the proposed Project from the northeast corner of Highway 33 and W. South Avenue, oriented southwest. This KOP reflects the views of southbound motorists on Highway 33. Due to distance and intervening vegetation and structures, views of the Project site are not available from the residences along Adams Avenue.

As shown in Figure 13, under existing conditions, agricultural fields and local electrical distribution lines are visible in the foreground. High-voltage transmission lines and towers and solar facilities are visible in the middle-ground. As shown in the simulation, the Project’s solar panels would be visible and would transform part of the foreground from an agricultural visual character to an industrial character. The Diablo Mountains would continue to be visible in the background, similar to existing conditions. An analysis of potential visual impacts is summarized in Table 5.

Table 5. Visual Quality Rating Analysis – KOP 2

Rated Feature	Pre-Development Score	Post-Development Score	Difference in Scores
Landform	2	2	0
Explanation	Project site and surrounding land are flat. Mountains are visible in the background.	Post-development the Project site would remain flat. Mountains remain visible in the background.	
Detail	In the views of both existing and simulated conditions, the flat landforms in the foreground and middle-ground predominate with views of the mountains visible in the background. With no substantial change to the landforms on the Project site, no significant impact to landforms would result from Project implementation.		
Vegetation	1	1	0
Explanation	Little variation in low-lying agricultural crops.	Vegetation on the Project site would be removed.	
Detail	Both the existing and simulated view show little contrast in vegetation. Agricultural vegetation would remain in the foreground. Loss of views of low criteria rated vegetation would be a less than significant impact.		
Water	0	0	0
Explanation	No water is present on the Project site or in the Project area.	The Project would not introduce water to the Project site.	
Detail	Neither existing nor simulated views include any water features.		
Color	1	1	0
Explanation	Muted color with little variation: tans in the foreground associated with agricultural fields; dark colors associated with existing solar facilities in the middle-ground.	Muted color with little variation: tans in the foreground associated with agricultural fields would remain in the foreground; dark colors associated with Project’s solar panels would appear closer in the middle-ground.	
Detail	Predominant colors from this viewpoint are associated with agricultural fields and existing solar facilities. The Project would increase the amount of dark color, however, loss of views of low criteria rated color would be a less than significant impact.		

Rated Feature	Pre-Development Score	Post-Development Score	Difference in Scores
Adjacent Scenery	2	2	0
Explanation	Adjacent scenery provides views of agricultural vegetation, solar facilities. Mountains are visible in the background.	Adjacent scenery would remain visible. Mountains would remain visible in the background.	
Detail	Adjacent scenery consists of flat lands with agricultural fields. The Project would replace views of agricultural fields on the Project site with solar facilities, however, mountains would still be visible.		
Scarcity	1	1	0
Explanation	Similar viewsheds throughout the region. No unique or unusual aspects.	Views of agricultural fields would be decreased and views of solar facilities would be increased.	
Detail	Existing views of agricultural fields and solar facilities are typical of the San Joaquin Valley and are not unique or unusual.		
Cultural Modifications	-1	-2	1
Explanation	Manmade modifications in this view include utility and transmission lines and structures and solar facilities in the middle-ground. These features are somewhat discordant with the surrounding landscape.	The Project would increase manmade modifications in this view with the introduction of solar facilities that would replace the open agricultural space.	
Detail	The existing view exhibits manmade modifications to the landscape of open agricultural space. The Project would introduce views of solar facilities in the foreground, primarily of solar panels. The Project would be discordant with the foreground landscape but due to the other solar facilities in the immediate area would not be an unexpected modification.		
Totals	6	5	1

The scenic quality of KOP 2, both under existing conditions and post development of the Project, is identified as low (Class IV). Visual encroachments including road infrastructure, overhead utility distribution lines, and solar facilities are distributed throughout the landscape. The Project would increase the visual encroachments and decrease the amount of agriculture open space. Drivers traveling southbound along Highway 33, would have a short duration of viewing the Project site and are expected to have a low viewer sensitivity to the visual changes on the Project site. Therefore, the impacts would be less than significant.

9.3.2.3 KOP 3

KOP 3 represents a view of the proposed Project from the east of the Project site and Highway 33 on W. Manning Avenue, oriented west. This KOP reflects the views of motorists traveling west on W. Manning Avenue.

As shown in Figure 15, under existing conditions, agricultural fields and local electrical distribution lines are visible in the foreground with orchards and vineyards in the background. The Diablo Mountains are visible in the background. As shown in the simulation, the Project’s solar panels would be visible and would transform the foreground from an agricultural visual character to an industrial character. The Diablo

Mountains would continue to be visible in the background, similar to existing conditions. An analysis of potential visual impacts is summarized in Table 6.

Table 6. Visual Quality Rating Analysis – KOP 3

Rated Feature	Pre-Development Score	Post-Development Score	Difference in Scores
Landform	2	2	0
Explanation	Project site and surrounding land are flat. Mountains are visible in the background.	Post-development the Project site would remain flat. Mountains remain visible in the background.	
Detail	In the views of both existing and simulated conditions, the flat landforms in the foreground and middle-ground predominate with views of the mountains visible in the background. With no substantial change to the landforms on the Project site, no significant impact to landforms would result from Project implementation.		
Vegetation	1	1	0
Explanation	Little variation in low-lying agricultural crops.	Vegetation on the Project site would be removed.	
Detail	The existing view shows little contrast in vegetation. The simulated view show very little agricultural vegetation remaining in the foreground. Loss of views of low criteria rated vegetation would be a less than significant impact.		
Water	0	0	0
Explanation	No water is present on the Project site or in the Project area.	The Project would not introduce water to the Project site.	
Detail	Neither existing nor simulated views include any water features.		
Color	1	1	0
Explanation	Muted color with little variation: tans in the foreground associated with agricultural fields. Dark color associated with orchards and vineyards in the background.	Dark color with little variation dominates in the foreground; small amount of tan associated with agricultural fields remains in the foreground.	
Detail	For existing conditions, predominant colors from this viewpoint are associated with the tans of agricultural fields. With the Project, predominant colors are associated with the dark color of the Project panels, however, loss of views of low criteria rated color would be a less than significant impact.		
Adjacent Scenery	2	0	2
Explanation	Adjacent scenery provides views of agricultural vegetation, solar facilities. Mountains are visible in the background.	With the exception of the mountains in the background, adjacent scenery would not remain visible.	
Detail	Adjacent scenery consists of flat lands with agricultural fields. The Project would replace views of agricultural fields on the Project site with solar facilities, however, mountains would still be visible.		
Scarcity	1	1	0
Explanation	Similar viewsheds throughout the region. No unique or unusual aspects.	Views of agricultural fields would be decreased and views of solar facilities would be increased.	

Rated Feature	Pre-Development Score	Post-Development Score	Difference in Scores
Detail	Existing views of agricultural fields and solar facilities are typical of the San Joaquin Valley and are not unique or unusual.		
Cultural Modifications	-1	-2	1
Explanation	Manmade modifications in this view include roadways, street lights, utility lines, and solar facilities in the foreground and middle-ground. These features are slightly discordant with the surrounding landscape.	The Project would increase manmade modifications in this view with solar facilities that would replace the open agricultural space.	
Detail	The existing view exhibits manmade modifications to the landscape of open agricultural space. The Project would introduce dominant views of solar facilities in the foreground. The Project would be discordant with the foreground landscape but due to the other solar facilities in the immediate area would not be an unexpected modification.		
Totals	6	3	3

The scenic quality of KOP 3, under existing conditions is identified as low (Class IV). Visual encroachments including road infrastructure, overhead utility distribution lines, and solar facilities are distributed throughout the landscape. The Project would increase the visual encroachments and decrease the amount of agriculture open space. Drivers traveling westbound along W. Manning Avenue would have a short duration of viewing the Project site and are expected to have a low viewer sensitivity to the visual changes on the Project site. Therefore, the impacts would be less than significant.

Level of Significance: Less than Significant.

9.4 LIGHT & GLARE

Would the proposed Project create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

The Project is not expected to create a substantial new source of nighttime lighting or daytime glare. The proposed Project will provide external safety lighting for both normal and emergency conditions at the primary access points. Lighting will be designed to provide the minimum illumination needed to achieve safety and security and will be downward facing and shielded to focus illumination in the immediate area.

The Fresno County Public Works and Planning Department currently conditions discretionary projects such that exterior lighting be hooded and directed so as to avoid glare onto adjacent roads or properties (County of Fresno 2019).

All lighting associated with the proposed Project will be subject to County approval and compliance with Fresno County requirements. Therefore, the Project will have a less than significant impact associated with nighttime lighting.

Unlike solar thermal facilities, which rely on large fields of mirrors to reflect light, the potential reflection from solar PV modules is inherently low since they are designed to capture and not to reflect sunlight. PV panels have a lower index of refraction/reflectivity than common sources of glare in residential environments. The glare and reflectance levels from a given PV system are lower than the glare and reflectance levels of steel, snow, standard glass, plexiglass, and smooth water (Shields 2010). The glare and reflectance levels of modules are further reduced with the application of anti-reflective coatings. PV

suppliers typically use stippled glass for panels as the “texturing” of the glass to allow more light energy to be channeled/transmitted through the glass while weakening the reflected light. With the application of anti-reflective coatings and use of modern glass technology, project PV panels would display overall low reflectivity. In addition, because tracker systems follow the sun, the underside of the PV panels and most of the structure supporting them are shadowed throughout the day.

Moreover, light reflected from the PV panels would travel above the line of site of most, if not all, viewers. PV tracking systems position the array so that the sun’s rays are always perpendicular to the face of the panel. What light is reflected from the panels is reflected back towards the sun. During midday conditions, when the sun is high in the sky, the rays of the sun are reflected directly upwards. For example, when the sun is low on the horizon (near dawn or dusk), the sun’s angle in the sky is low; however, reflected rays would still be directed away from ground-level receptors because the maximum downward angle of the arrays would not be below 30 degrees. Similarly, and also due to their low reflectivity, the panels are not expected to cause visual impairment for motorists on area roadways. This is also expected for pilots arriving and departing at San Joaquin Airport, as in addition to the low reflectivity, the airport is located over nine miles to the east of the Project (AirNav 2020).

Level of Significance: Less than significant impact.

Subject: Land Evaluation and Site Assessment for the Luna Valley Solar - Project, Fresno
County, California

1.0 Introduction

The Land Evaluation and Site Assessment (LESA) model is an approach for rating the relative quality of land resources based upon specific measurable features. The LESA model was first developed by the federal Natural Resource Conservation Service (NRCS) in 1981. It was subsequently adapted in 1990 by the California Department of Conservation to evaluate land use decisions that affect the conversion of agricultural lands in California (Public Resources Code Section 21095). The formulation of the California Agricultural LESA Model is intended to provide lead agencies under the California Environmental Quality Act with a methodology to ensure that agricultural land conversions are quantitatively and consistently considered in the environmental review process.

Luna Valley Solar I, LLC (Applicant) is proposing to develop, own, and operate the Luna Valley Solar Project (Project) in Fresno County, California, 9 miles west-southwest of the city of Tranquility within the unincorporated area of Levis (Figure 1). The Project, which includes a solar electricity generating facility and energy storage system, will be located on land that has historically been used to produce dryland wheat and alfalfa and in dry years used to graze livestock. The soils are limited by high mineral content and a high water table and so are unsuitable for irrigated crops in this arid region (NRCS 2020). Average precipitation in the immediate vicinity of the Project site is 8 inches per year (NOAA 2020).

The analysis concludes that the conversion of the approximately 1,300 acres of agricultural land by the project **will not result in a significant loss of farmland** according to the LESA Model.

2.0 California Land Evaluation and Site Assessment Model

The following sections align with the California LESA Model worksheets published by the NRCS. Each section is built on the information in the previous section and results in a final score that is the basis for the final determination. The scores for each section are derived from the tables within the LESA manual.

Land Capability Classification and Storie Index Scores

The Land Capability Classification (LCC) indicates the suitability of soils for most kinds of crops. Soils are rated from Class I to Class VIII, with soils having the fewest limitations receiving the highest rating. Subclasses designated with a lower-case letter (identified as e, w, s, or c) are typically used in conjunction with the roman numerals to further describe soil limitations. The letter “e” indicates that the

main limitation of the soil is erosion; “w” indicates that the presence of water either within or on the soil causes limitation in plant growth; “s” indicates that the soil is shallow, droughty, or stony; and “c” indicates that the limitation is a climate that is generally too cold or hot for many plants. The LCC has separate scales used independently for irrigated and non-irrigated lands.

The NRCS supplied Storie Index provides a numeric rating (based upon a 100-point scale) of the relative degree of suitability or value of a given soil for intensive agriculture use. The rating is based only on soil characteristics, such as depth, texture of the surface soil, density of the subsoil, drainage, salts and alkalinity, and relief. Other factors, such as availability of water for irrigation and climate are not considered in the Storie Index.

Table 1 shows the LCC and Storie Index Scores for the three soil types found within the Project site. The LESA model score is based on the irrigated LCC. All three of the onsite soils are known for having a high selenium content which, combined with the high water table on the Project site, make irrigated farming impractical. The non-irrigated LCC scores for the three soils on site are 7w, 7s, and 7s, all of which are considered to have very severe limitations. These limitations make them unsuitable for cultivation and restrict their use mainly to pasture, rangeland, forestland, or wildlife habitat (NRCS 2020).

Table 1. Land Capability Classification and Storie Index Scores

A	B	C	D	E	F	G	H
Soil Map Unit ¹	Project Acres	Proportion of Project Area	LCC ¹ (irrigated)	LCC Rating ² (irrigated)	LCC Score (C x E)	Storie Index ¹	Storie Index Score (C x G)
286	365.9	0.3	IIIw	60	16.9	21	5.9
461	430.2	0.3	IIIs	60	19.9	30	9.9
482	503.9	0.4	IIIs	60	23.3	65	25.2
Totals	11,300.0	1		LCC Total Score	60.0	Storie Index Total Score	41.0
¹ The Soil Map Unit information and acreage, LCC and Storie Index information were determined from the current soil survey information available at the U.S. Department of Agriculture Natural Resources Conservation Service website: https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx .							
² The LCC Rating for irrigated land was determined from the LCC Point Rating Table 2 from the LESA Instruction Manual (CDC 1997).							

Project Size Scores

The Project Size rating recognizes the role that farm size plays in the viability of commercial agricultural operations. In general, larger farming operations can provide greater flexibility in farm management and marketing decisions. Larger operations tend to have greater impacts upon the local economy through direct employment. In terms of agricultural productivity, the size of the farming operation can be considered not just from its total acreage, but the acreage of different quality lands that comprise the operation. Lands with higher quality soils lend themselves to greater diversity in crop selection and the potential for greater economic return per acre unit. The Project Size rating is determined by summing the acres in a project that fall within one of three consolidated LCC categories.

Under the Project Size Score rating (Table 2), relatively fewer acres of high-quality soils are required to achieve a maximum Project Size Score. The proposed Project site received the maximum score in the LCC Class III category and scores of 0 in the remaining categories.

Table 2. Project Size Scores

	LCC Class I-II	LCC Class III	LCC Class IV-VIII
Total Acres	0	1300.0	0
Project Size Scores ¹	0	100	0
Highest Project Size Score	100		
¹ Project Size Score was determined from the Project Size Scoring Table from the LESA Instruction Manual (CDC 1997).			

Water Resources Availability

The Water Resources Availability rating for the Project is based upon identifying the various sources that may supply the Project area, and then determining whether different restrictions in supply are likely to take place in years that are characterized as being periods of drought and non-drought. Table 3 summarizes the limited water availability in the Project area.

The Water Resources Availability Score is scored on a scale of 1–100. The historic cropping system was dryland wheat and/or alfalfa and was left fallow during drought years. The soils are not amenable to irrigation due to high levels of selenium and so dryland cropping and/or livestock grazing are the only suitable agricultural uses. The Project site has not been irrigated.

Table 3. Water Resources Availability

A	B	C	D	E
Project Portion	Water Source	Proportion of Project Area	Water Availability Score ¹	Weighted Availability Score (C x D)
All	None	0	0	0
Total Water Resource Score				0
¹ Water Resources Availability Score was determined from the scoring table from the LESA Instruction Manual (CDC 1997).				

Surrounding Agricultural Land Rating

The Surrounding Agricultural Land Rating is designed to provide a measurement of the level of agricultural land use for lands within the Zone of Influence of the Project area. The California Agricultural LESA Model rates the potential significance of the conversion of an agricultural parcel that has a large proportion of surrounding land in agricultural production more highly than one that has a relatively small percentage of surrounding land in agricultural production.

The Surrounding Protected Resource Land Rating is essentially an extension of the Surrounding Agricultural Land Rating and is scored in a similar manner. Protected resource lands are those lands with long term use restrictions that are compatible with or supportive of agricultural uses of land including: publicly owned lands maintained as park, forest, or watershed resources; Williamson Act contracted lands; and lands with natural resource easements that restrict the conversion of such land to urban or industrial uses.

The Zone of Influence is the amount of surrounding lands up to a minimum of one-quarter mile from the project boundary. Table 4 summarizes the findings for the Project.

Table 4. Surrounding Agricultural Land Rating

A	B	C	D	E	F	G
Zone of Influence					Surrounding Agricultural Land Score ¹	Surrounding Protected Resource Land Score ¹
Total Acres	Acres in Agriculture ¹	Acres of Protected Resource Land ¹	Percent in Agriculture (B/A)	Percent Protected Resource Land (C/A)		
5145	1550	580	30%	11%	0	0
¹ Acres were determined based on data from Fresno County Parcel Assessment Roll (Fresno County 2020). ² Score was determined from the scoring table from the LESA Instruction Manual (CDC 1997).						

Final LESA Score Sheet

The California LESA Model is weighted so that 50 percent of the total LESA score of a given project is derived from the Land Evaluation factors, and 50 percent from the Site Assessment factors. Table 5 provides the calculation of a final LESA score of 40.3 for the proposed Project.

Table 5. Final LESA Score Sheet

	Factor Scores	Factor Weight	Weighted Factor Scores
Land Evaluation Factors			
Land Capability Classification	60.0	0.25	15.0
Storie Index	41.0	0.25	10.3
<i>Land Evaluation Subtotal</i>		0.5	25.3
Site Assessment Factors			
Project Size	100	0.15	15.0
Water Resource Availability	0	0.15	0
Surrounding Agricultural Land	0	0.15	0
Protected Resource Land	0	0.05	0
<i>Site Assessment Total</i>		0.5	15.0
Final LESA Score			40.3

3.0 Final Result

According to the California Agricultural LESA Model Instruction Manual, a final LESA score ranging from 40–59 points is considered significant only if both the land evaluation and site assessment weighted factor subscores are each greater than 20 points (CDC 1997). For the proposed Project, the land evaluation score exceeds 20 points; however, the site assessment score is below the 20-point threshold. The proposed Project will not have a significant impact on agricultural land use within the Project area or Zone of Influence (Table 6).

Table 6. LESA Model Significance Determination

Total LESA Score	Scoring Decision
0–39 Points	Not considered significant
40–59 Points	Considered significant <i>only</i> if both the Land Evaluation and Site Assessment (found in Table E from the LESA Instruction Manual [CDC 1997]) weighted factor subscores are each <i>greater</i> than or equal to 20 points.

Table 6. LESA Model Significance Determination

Total LESA Score	Scoring Decision
60–70 Points	Considered significant <i>unless</i> either of the Land Evaluation and Site Assessment weighted factor subscores is <i>less</i> than 20 points.
80–100 Points	Considered significant

OVERVIEW

Luna Valley Solar I, LLC is proposing to develop, own, and operate the Luna Valley Solar Project (Project) in Fresno County, California, 9 miles west-southwest of the city of Tranquillity within the unincorporated area of Levis (Figure 1). The Project consists of constructing and operating a photovoltaic (PV) solar electricity generating facility, energy storage system, (ESS) and associated infrastructure that would produce up to 200 megawatts of alternating current energy at the point of electrical grid interconnection on approximately 1,300 acres of privately owned agricultural land (Figure 2) in western Fresno County. The Project would include the construction of solar arrays, an electrical substation and electrical interconnection facilities, an energy storage system and other necessary infrastructure including an operation and maintenance building, septic system and leach field, a supervisory control and data acquisition system, a meteorological data system, buried conduit for electrical wires, overhead collector lines, on-site access roads and security fencing.

The air quality analysis presented in this report evaluates the potential air quality impacts associated with the proposed Project. The proposed schedule for construction begins in 2022 for a duration of 16 months, completing in 2023. Because the Project is located within the jurisdiction of the San Joaquin Valley Air Pollution Control District (SJVAPCD), the air quality analysis follows SJVAPCD's guidelines. This report also provides estimates of greenhouse gas (GHG) emissions from the combustion of fossil fuels, primarily from construction of the proposed facility.

In summary, the air quality and GHG analysis concludes that emissions during short-term construction and during long-term operation of the project will not exceed the California Environmental Quality Act (CEQA) significant thresholds established by the SJVAPCD. Therefore, the project does not pose significant adverse impacts on local air quality or global climate change.

FIGURE 2**

1.0 INTRODUCTION

1.1 PURPOSE AND SCOPE

Tetra Tech has prepared an air quality analysis report to evaluate potential air quality and GHG impacts associated with the proposed solar project. This analysis was prepared in accordance with the San Joaquin Valley Air Pollution Control District's (SJVAPCD) Guide for Assessing and Mitigating Air Quality Impacts (SJVAPCD 2015a). This report has been prepared to support an environmental review with the County of Fresno as lead CEQA agency for the Project. The California Air Resources Board (CARB) and the SJVAPCD's methods, standards, and significance thresholds used in this analysis are considered appropriate for determining whether impacts require mitigation measures to be implemented.

Air quality impacts from grading and construction sources were analyzed based on the equipment used, length of time for a specific construction task, equipment power type (gasoline or diesel engine), equipment emission factors established by the U.S. Environmental Protection Agency (EPA; AP-42 handbooks), horsepower, load factor, and percentage of time in use. Exhaust and dust emissions from worker commutes and travel were calculated based on available information regarding these activities. Fugitive dust (fine particulate matter equal to or less than 10 microns [PM₁₀] and fine particulate matter equal to or less than 2.5 microns [PM_{2.5}]) emissions would result from wind erosion of exposed soil and soil storage piles, grading operations, and vehicles traveling on paved and unpaved roads. These emissions were calculated based on construction information available and provided to Tetra Tech. Motor vehicle pollutant emissions associated with the project were estimated for future conditions, utilizing information on facility operations. The California Emissions Estimator Model (CalEEMod; CAPCOA 2016) was used to calculate the emissions associated with vehicle trips from the project site. Emissions associated with long-term stationary sources, including an emergency engine, were also quantified using CalEEMod. The total project construction and operational emissions were compared to the SJVAPCD threshold criteria, and a determination of significance was made.

A discussion of GHGs and their potential effects on global climate change is included. Emissions of carbon dioxide (CO₂), a key GHG identified in Assembly Bill (AB) 32, and other major GHGs such as methane (CH₄) and nitrous oxide (N₂O) from direct and indirect project-related sources were calculated. Tetra Tech calculated the construction-related GHG emissions commensurate with available project specific information. Standard measures for construction activities recommended by the SJVAPCD were identified and incorporated as part of the project's standard conditions. Potential GHG impacts and benefits associated with the proposed solar project were calculated.

1.2 PROJECT DESCRIPTION

The Project consists of constructing and operating a PV solar electricity generating facility and energy storage system (ESS) and associated infrastructure that would produce up to 200 megawatts of alternating current energy at the point of electrical grid interconnection on approximately 1,300 acres of privately owned agricultural land (Figure 2) in western Fresno County. The Project would include the construction of solar arrays, an electrical substation and electrical interconnection facilities, an energy storage system and other necessary infrastructure including an operation and maintenance building, septic system and leach field, a supervisory control and data acquisition system, a meteorological data system, buried conduit for electrical wires, overhead collector lines, on-site access roads and security fencing.

1.3 REGIONAL AND LOCAL SETTING

The Project site is located within the Central Valley region of Fresno County. The region consists of a single broad, flat valley, drained by the San Joaquin River and its tributaries, bound by the Sierra Nevada

to the east and the Coast Range to the west. The elevation ranges from about 150 to 450 feet above sea level. Historically, the dominant habitat types were arid grasslands and shrub lands with expansive Valley Oak riparian woodlands and freshwater emergent wetlands in the proximity of water sources. Today, most of the land has been converted for agricultural uses.

The Project site is in an unincorporated area of Fresno County 9 miles west-southwest of the city of Tranquillity. Land use in the area is mostly agricultural interspersed with sparse rural residential development and solar energy facilities that are currently operating or under development. The nearest rural residences are located approximately 1,500 feet from the southeast corner of the Project site along Highway 33. Interstate 5, paralleled to the east by the California Aqueduct, is approximately 11 miles to the west as well as to the south of Project site. The cities of Mendota and San Joaquin are approximately 10 miles north and east of Project site, respectively. The San Joaquin Airport is roughly 9.5 miles east.

Interstate 5 is the only major transportation route near the site. The Interstate runs north to south connecting southern California to northern California and the Pacific Northwest. Near the site, the Interstate veers slightly south-southeast and thus is approximately 11 miles to the west as well as to the south of Project area. Most roadways in the immediate Project area vicinity are unimproved or paved without curb or sidewalk improvements. West Manning Avenue, which cuts through the Project area, connects the cities of Tranquillity and San Joaquin to Interstate 5. Highway 33, the eastern boundary of the Project area, connects the city of Mendota to the Interstate.

The nearest airport is the privately-owned San Joaquin Airport (CA32). The nearest major airport is the Fresno Yosemite International Airport, which is over 40 miles from the Project area. The nearest military facility is approximately 30 miles to the southeast at the Naval Air Station in Lemoore.

Figure 1 displays the Project location.

2.0 AIR QUALITY

2.1 ENVIRONMENTAL SETTING

2.1.1 Climate and Topography

The San Joaquin Valley Air Basin (Valley) is comprised of eight counties, representing 16 percent of California's geographic area. It is approximately 250 miles long and 35 miles wide (average) and has a bowl shaped topography with surrounding mountains on three sides. The Sierra Nevada Mountains are to the east, the Coast Ranges to the west, and the Tehachapi mountains to the south. At the northwest end, the Valley opens to the San Francisco Bay.

The Valley is in a Mediterranean Climate Zone, characterized by hot and dry summers with maximum temperatures that often exceed 100 degrees F, and winters with sparse rainfall. High pressure events can lead to temperature inversions, inhibiting vertical mixing and trapping air pollutants.

Winds in the Valley most frequently blow from the northwest, channeling air towards the southeastern end of the Valley. Marine air occasionally flows from the San Joaquin River Delta toward the south, over the Tehachapi pass. The Coastal Range and the Sierra Nevada range restrict air movement to the west and east, respectively. During winter, weak winds can lead to limited transport of pollutants (SJVAPCD 2015a).

2.1.2 Pollutants and Effects

The Clean Air Act (CAA) requires EPA to set National Ambient Air Quality Standards (NAAQS) for six common air pollutants. EPA calls these "criteria" air pollutants because it regulates them by developing health-based (primary) or environmentally-based (secondary) standards. These pollutants are summarized below.

Ozone (O₃) is a secondary pollutant that is formed from the reaction of nitrogen oxides and volatile organic compounds in the presence of sunlight. Ozone exists naturally in the stratosphere, shielding Earth from harmful ultraviolet radiation. However, at ground-level, ozone causes adverse health effects and is a major component of smog. High concentrations have been tied to respiratory ailments and cardiovascular disease, as well as damage to natural ecosystems, agricultural crops, and materials such as rubber, paint, and plastics.

Reactive organic gases (ROG) are composed of hydrocarbon compounds that contribute to the formation of smog through atmospheric chemical reactions. ROG are emitted from fuel combustion and industrial and agricultural processes. Compounds that make up ROG are often evaluated as part of a toxic risk assessment under AB 2588 provisions.

Nitrogen Oxides (NO_x) are a family of gaseous nitrogen compounds that result primarily from the combustion of fossil fuels. It is a precursor to the formation of ozone and particulate matter, and Nitrogen Dioxide (NO₂) is assigned with NAAQS and CAAQS.

Particulate Matter (PM) is comprised of solid particles and liquid droplets, made up of acids, organic chemicals, metals, and soil or dust particles. Particles that are 10 micrometers in diameter or smaller are a potential human health concern because they can enter the lungs, which can affect the heart and cause adverse health effects. They can be emitted directly to the atmosphere as well as formed in the atmosphere by chemical reactions among precursors. Particulate matter can be categorized based on their size:

Inhalable coarse particles (PM_{2.5}-PM₁₀) are between 2.5 and 10 micrometers in diameter. Sources include roads, farming activities, windblown dust as well as combustion sources.

Fine particles (PM_{2.5}) are 2.5 micrometers in diameter or smaller, generally emitted by combustion sources like vehicles, power generation, industrial processes and wood burning.

Carbon Monoxide (CO) is an odorless, colorless gas formed by the incomplete combustion of fuels emitted directly into the air. The main source of CO in the Valley is on-road motor vehicles. Therefore, CO problems tend to be localized with nonattainment areas designated in urban areas rather than the entire basin. With the introduction of new automotive emission controls and fleet turnover, emissions from motor vehicles have been declining.

Sulfur Dioxide (SO₂) is a colorless gas formed by the combustion of fossil fuels that contain sulfur. The Valley is in attainment of both the Federal and California standards for SO₂. The use of low-sulfur fuel has minimized problems with this pollutant.

2.1.3 Sensitive Receptors

Sensitive receptors are segments of the population most susceptible to poor air quality (i.e. children, the elderly, and those with pre-existing serious health problems related to respiratory distress). Land uses often identified as sensitive receptors include schools, parks, playgrounds, daycare centers, nursing homes, hospitals, and residential communities.

Land use in the area is mostly agricultural interspersed with sparse rural residential development and solar energy facilities that are currently operating or under development. The nearest rural residences are located approximately 1,500 feet from the southeast corner of the Project site along Highway 33. The greatest potential for exposure to air pollutants would occur during construction, when the ground would be disturbed from grading and delivery of materials. The construction emissions presented in this analysis are based on worst-case conditions, assuming maximum construction activity would occur simultaneously. In reality, exposure to emissions would vary substantially throughout construction, and would depend on the staging of the work being conducted, location of work relative to receptors, and weather conditions.

2.2 REGULATORY SETTING

Ambient air quality standards are the levels of air quality considered safe, with an adequate margin of safety, to protect the public health and safety. They are designed to protect those people most susceptible to respiratory distress (i.e., sensitive receptors), such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and people engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed. Recent research suggests however, that long-term exposure to air pollution at levels that meet air quality standards may nevertheless have adverse health effects. For example, ozone exposure even at levels close to the ambient air quality standard may lead to adverse respiratory health.

The following discussion describes the regulatory authority of the federal, state and local jurisdictions. The federal CAA, the California Clean Air Act (CCAA), and the Air Quality Management Plan (AQMP), prepared and adopted by the SJVAPCD, regulate air quality in the air basin. Federal and state standards are shown in Table 1, State and Federal Air Quality Standards.

2.2.1 Federal Regulations

2.2.1.1 *Criteria Air Pollutants*

The federal CAA (42 United States Code Section 7401-7671q) is a comprehensive Federal law that regulates air emissions from area, stationary, and mobile sources and requires the adoption of the NAAQS to protect public health and welfare from the effects of air pollution. The Federal CAA

Amendments of 1990 required that the EPA review all National Ambient Air Quality Standards with respect to health impacts and propose modifications or new rules as appropriate. In addition, the amendments of the 1990 federal CAA are associated with the attainment and maintenance of air quality standards, permits and enforcement, toxic air pollutants, acid deposition, stratospheric ozone protection and motor vehicles and fuels.

Current NAAQS are assigned to SO₂, CO, NO₂, O₃, PM₁₀, PM_{2.5}, and Lead. These pollutants are designated criteria pollutants.

2.2.1.2 Hazardous Air Pollutants

The 1977 federal CAA amendments required the EPA to identify National Emission Standards for hazardous air pollutants (HAPs) to protect public health and welfare. HAPs include certain volatile organic chemicals, pesticides, herbicides, and radionuclides that present a tangible hazard, based on scientific studies of exposure to humans and other mammals. The 1990 federal CAA Amendments, which expanded the control program for HAPs, identified 189 substances and chemical families as HAPs.

2.2.2 State Regulations

2.2.2.1 Criteria Air Pollutants

The CCAA, passed by the California Legislature and signed into law by the Governor in 1988, assigns state-specific ambient air quality standards. The California standards are, in most cases, more stringent than federal standards. The goal of the CCAA is to attain state air quality standards by the earliest practical date. Because California established Ambient Air Quality Standards several years before the federal action and because of unique air quality problems introduced by the restrictive dispersion meteorology in much of California, there can be a considerable difference between state and national clean air standards. Those standards currently in effect in California are shown on Table 1, State and Federal Ambient Air Quality Standards.

The CCAA requires each air pollution control district of an air basin designated as nonattainment of state ambient air quality standards to prepare and submit a plan for attaining and maintaining state standards. After further review of the relationship between fine particulate matter and human health effects, the CARB adopted new state standards on June 20, 2002 for PM_{2.5} that are more stringent than the federal standards. No specific control programs are in place to achieve this much more stringent standard. However, it does represent an air quality goal to dramatically reduce the adverse health effects from small-particle air pollution.

2.2.2.2 Toxic Air Contaminants

The state Air Toxics Program was established in 1983 under AB 1807 (Tanner). The California Toxic Air Contaminants (TAC) list identifies more than 700 pollutants, of which carcinogenic and noncarcinogenic toxicity criteria have been established for a subset of these pollutants pursuant to the California Health and Safety Code. In accordance with AB 2728, the state list includes the (federal) HAPs. The Air Toxics "Hot Spots" Information and Assessment Act of 1987 (AB 2588) seeks to identify and evaluate risk from air toxics sources. TAC emissions from individual facilities are quantified and prioritized. "High-priority" facilities are required to perform a health risk assessment, and if specific thresholds are exceeded, facilities are required to communicate the results to the public in the form of notices and public meetings.

In 2000, CARB approved a comprehensive Diesel Risk Reduction Plan to reduce diesel emissions from both new and existing diesel-fueled vehicles and engines (CARB 2016). The regulation is anticipated to result in an 80 percent decrease in statewide diesel health risk in 2020 compared with the diesel risk in 2000. Additional regulations apply to new trucks and diesel fuel, including the On-Road Heavy Duty Diesel Vehicle (In-Use) Regulation, On-Road Heavy Duty (New) Vehicle Program, In-Use Off-Road

Diesel Vehicle Regulation, and New Off-Road Compression-Ignition (Diesel) Engines and Equipment program. These regulations and programs have timetables by which manufacturers must comply and existing operators must upgrade their diesel powered equipment. Several Airborne Toxic Control Measures reduce diesel emissions, including In-Use Off-Road Diesel-Fueled Fleets (13 California Code of Regulations [CCR] 2449 et seq.) and In-Use On-Road Diesel-Fueled Vehicles (13 CCR 2025).

California Health and Safety Code Section 41700

Section 41700 of the Health and Safety Code states that a person shall not discharge from any source whatsoever quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public; or that endanger the comfort, repose, health, or safety of any of those persons or the public; or that cause, or have a natural tendency to cause, injury or damage to business or property. This section also applies to sources of objectionable odors.

Table 1. State and Federal Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards ¹		Federal Standards ²		
		Concentration ³	Method ⁴	Primary ^{3, 5}	Secondary ^{3, 6}	Method ⁷
Ozone (O ₃)	1 Hour	0.09 ppm (180 µg/m ³)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m ³)		0.075 ppm (147 µg/m ³)		
Respirable Particulate Matter (PM ₁₀)	24 Hour	50 µg/m ³	Gravimetric or Beta Attenuation	150 µg/m ³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m ³		—		
Fine Particulate Matter (PM _{2.5})	24 Hour	—	—	35 µg/m ³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m ³	Gravimetric or Beta Attenuation	12 µg/m ³	15 µg/m ³	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m ³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m ³)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m ³)		9 ppm (10 mg/m ³)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m ³)		—	—	
Nitrogen Dioxide (NO ₂) ⁸	1 Hour	0.18 ppm (339 µg/m ³)	Gas Phase Chemiluminescence	100 ppb (188 µg/m ³)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m ³)		0.053 ppm (100 µg/m ³)	Same as Primary Standard	
Sulfur Dioxide (SO ₂) ⁹	1 Hour	0.25 ppm (655 µg/m ³)	Ultraviolet Fluorescence	75 ppb (196 µg/m ³)	—	Ultraviolet Fluorescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m ³)	
	24 Hour	0.04 ppm (105 µg/m ³)		0.14 ppm (365 µg/m ³) ⁹	—	
	Annual Arithmetic Mean	—		0.30 ppm (for certain areas) ⁹	—	

Pollutant	Averaging Time	California Standards ¹		Federal Standards ²		
		Concentration ³	Method ⁴	Primary ^{3, 5}	Secondary ^{3, 6}	Method ⁷
Lead (Pb) ^{10, 11}	30 Day Average	1.5 µg/m ³	Atomic Absorption	—	—	—
	Calendar Quarter	—		1.5 µg/m ³ (for certain areas) ⁹	Same as Primary Standard	High Volume Sampler and Atomic Absorption
Visibility Reducing Particles ¹²	8 Hour	See footnote 12	Beta Attenuation and Transmittance through Filter Tape	No National Standards		
Sulfates (SO ₄)	24 Hour	25 µg/m ³	Ion Chromatography			
Hydrogen Sulfide	24 Hour	0.03 ppm (42 µg/m ³)	Ultraviolet Fluorescence			
Vinyl Chloride ¹⁰	24 Hour	0.01 ppm (26 µg/m ³)	Gas Chromatography			

Source: California Air Resources Board (<http://www.arb.ca.gov/research/aaqs/aaqs2.pdf>, updated 06/07/12), and U.S. Environmental Protection Agency (<http://www.epa.gov/air/criteria.html>, accessed January 2013)

- 1 California standards for ozone, carbon monoxide (except Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, suspended particulate matter (PM₁₀, and PM_{2.5}) and visibility reducing particles, are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
- 2 National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest eight-hour concentration in a year, averaged over three years, is equal to or less than the standard. For PM₁₀, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m³ is equal to or less than one. For PM_{2.5}, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the EPA for further clarification and current national policies.
- 3 Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. The torr (symbol: Torr) is a non-SI unit of pressure with the ratio of 760 to 1 standard atmosphere, chosen to be roughly equal to the fluid pressure exerted by a millimeter of mercury, i.e., a pressure of 1 Torr is approximately equal to one millimeter of mercury. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
- 4 Any equivalent procedure which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.
- 5 National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect public health.
- 6 National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
- 7 Reference method as described by the EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the EPA.
- 8 To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
- 9 On June 2, 2010, a new 1-hour SO₂ standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO₂ national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.
- 10 CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects that are determined. These actions allow implementing control measures at levels below the ambient concentrations specified for these pollutants.
- 11 The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 µg/m³ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
- 12 In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

2.2.3 Local Regulations

2.2.3.1 San Joaquin Valley Air Pollution Control District

The CARB coordinates and oversees both State and federal air pollution control programs in California and has divided the State into 15 air basins. Significant authority for air quality control within each basin has been given to local Air Pollution Control Districts or Air Quality Management Districts that regulates

stationary source emissions and develops local non-attainment plans. The SJVAPCD is the regional agency responsible for the regulation and enforcement of federal, state, and local air pollution control regulations in the Valley. The SJVAPCD jurisdiction includes all of Merced, San Joaquin, Stanislaus, Madera, Fresno, Kings, and Tulare counties, and the San Joaquin Valley portion of Kern County.

The SJVAPCD has developed plans to attain State and Federal standards for ozone and particulate matter. The following attainment plans are currently in effect:

1-Hour Ozone. Although the EPA revoked the 1-hour ozone standard in 2005, the Valley must still attain this standard. The SJVAPCD is in the process of requesting an EPA finding of attainment based on 2011-2013 ozone data and will continue working closely with ARB and EPA on this issue. The latest attainment plan is the *2013 Plan for the Revoked 1-Hour Ozone Standard* (SJVAPCD 2013).

8-Hour Ozone. The SJVAPCD has developed the *2016 Ozone Plan* (SJVAPCD 2016) to address EPA's 2008 8-hour ozone standard, which the Valley must attain by 2032. While the Valley is nearing its naturally-occurring background concentrations, attainment may not be possible without the virtual elimination of fossil fuel combustion.

PM₁₀. The SJVAPCD adopted the *2007 PM₁₀ Maintenance Plan and Request for Redesignation* (SJVAPCD 2007), which demonstrated that the Valley has reached and will continue to meet the PM₁₀ standard. EPA approved the document in 2008 and Valley was redesignated to attainment/maintenance.

PM_{2.5}. The SJVAPCD's 2008 PM_{2.5} Plan demonstrated attainment of the 1997 PM_{2.5} standard in 2014. EPA lowered the PM_{2.5} standard in 2006 and again in 2012, and the SJVAPCD's *2018 Plan for the 1997, 2006, and 2012 PM_{2.5} Standards* (SJVAPCD 2018) sets an attainment deadline of 2024.

The SJVAPCD's primary means of implementing air quality plans is by adopting and enforcing rules and regulations. Stationary sources within the jurisdiction are regulated by the SJVAPCD's permit authority and through its review and planning activities. Unlike stationary source projects, which encompass very specific types of equipment, process parameters, throughputs, and controls, air emissions sources from land use development projects are mainly mobile sources (traffic) and area sources (small dispersed stationary and other non-mobile sources), including exempt (i.e., no permit required) sources such as consumer products, landscaping equipment, furnaces, and water heaters. Mixed-use land development projects may include nonexempt sources, including devices such as small to large boilers, stationary internal combustion engines, gas stations, or asphalt batch plants.

Notwithstanding nonexempt stationary sources, which would be permitted on a case-by-case basis, SJVAPCD regulations VIII and IX generally apply to land use development projects and are described as follows:

Regulation VIII - Fugitive PM₁₀ Prohibition. Rule 8021 Construction, Demolition, Excavation, Extraction, and Other Earthmoving Activities. Pursuant to Rule 8021 Section 6.3, the Project would be required to develop, prepare, submit, obtain approval of and implement a Dust Control Plan, which would reduce fugitive dust impacts to less than significant for all construction phases of the Project.

Regulation IX - Mobile and Indirect Sources. Rule 9510 Indirect Source Review (ISR). The ISR rule went into effect March 1, 2006 and requires developers of new residential, commercial, and some industrial projects to reduce NO_x and PM₁₀ emissions generated by their projects. Pursuant to Rule 9510, the purpose of the ISR program is to reduce emissions of NO_x and PM₁₀ from new land development projects. Section 6.0 of the ISR rule outlines general mitigation requirements for developments that include reduction in construction emissions of 20 percent of the total construction NO_x emissions, and 45 percent of the total construction PM₁₀ exhaust emissions. The rule also requires the Project to reduce operational NO_x

emissions by 33.3 percent and operational PM₁₀ emissions by 50 percent, as compared to the unmitigated baseline. Section 7.0 of the ISR rule includes fee schedules for construction or operational excess emissions of NO_x or PM₁₀ those emissions above the goals identified in Section 6.0 of the rule. Monies collected from this fee are used by the SJVAPCD to fund emission reduction projects in the San Joaquin Valley Air Basin on behalf of the Project.

Rule 9610 State Implementation Plan Credit for Emission Reductions Generated through Incentive Programs. Rule 9610 provides an administrative mechanism for the SJVAPCD to receive credit towards SIP requirements for emission reductions achieved in the San Joaquin Valley Air Basin through incentive programs administered by the SJVAPCD, United States Department of Agriculture Natural Resources Conservation Service, or CARB. On April 9, 2015, EPA finalized a limited approval and limited disapproval (for a minor administrative error) of Rule 9610 as a revision to the California State Implementation Plan (SIP). Additional documentation regarding the effectiveness of the SJVAPCD's incentive programs can be found in 2015 Annual Demonstration Report SIP Credit for Emission Reductions Generated Through Incentive Programs (SJVAPCD 2015b).

2.2.3.2 Fresno Council of Governments

The Fresno Council of Governments (FCOG) is the regional planning agency for Fresno County and serves as a forum for regional issues relating to transportation, the economy, community development, and the environment. FCOG serves as the federally designated metropolitan planning organization for Fresno County. With respect to air quality planning and other regional issues, FCOG has prepared the 2014 Regional Transportation Plan and Sustainable Communities Strategy (2014 RTP/SCS) for the region (FCOG 2014). The 2014 RTP/SCS is a problem-solving guidance document that directly responds to what FCOG has learned about Fresno County's challenges through the annual State of the Region report card.

2.3 REGIONAL AND LOCAL AIR QUALITY CONDITIONS

2.3.1 San Joaquin Valley Air Basin Attainment Status

In an effort to protect human health and welfare, the CARB and EPA have established Ambient Air Quality Standards. Areas are considered in "attainment" if standards are met and "nonattainment" if they are not met. For ozone, nonattainment status is further classified as marginal, moderate, serious, severe or extreme.

At the federal level, the Valley is designated as a "extreme" non-attainment area for the 8-hour ozone standard, nonattainment for PM_{2.5}, and a maintenance area for PM₁₀. At the state level, the Valley is designated as a "severe" non-attainment area for 1-hour ozone standard, non-attainment for the 8-hour ozone standard, and non-attainment for both the PM₁₀ and PM_{2.5} standards. The attainment classifications for the criteria pollutants are presented in Table 2.

Table 2. San Joaquin Valley Attainment Status

Pollutant	Designation/Classification	
	Federal Standards	State Standards
Ozone (1-Hour)	No federal standard	Nonattainment/Severe
Ozone (8-Hour)	Nonattainment/Extreme	Nonattainment
NO ₂	Attainment/Unclassified	Attainment
CO	Attainment/Unclassified	Attainment/Unclassified
PM ₁₀	Attainment	Nonattainment
PM _{2.5}	Nonattainment	Nonattainment

Pollutant	Designation/Classification	
	Federal Standards	State Standards
SO ₂	Attainment/Unclassified	Attainment
Lead	No Designation/Classification	Attainment
Hydrogen Sulfide	No Federal Standard	Unclassified
Sulfates	No Federal Standard	Attainment
Visibility Reducing Particles	No Federal Standard	Unclassified
Vinyl Chloride	No Federal Standard	Attainment

Sources: SJVAPCD 2015a

2.3.2 Local Ambient Air Quality

An extensive air monitoring network operated by SJVAPCD, CARB, and the U.S. National Park Service measure concentrations for major pollutants to determine attainment status as well as generate air quality forecasts.

The closest ambient air quality monitoring station to the Project is the Tranquillity monitoring station, located approximately 1.4 miles to the north of the proposed Project, which collects both ozone and PM_{2.5} measurements. The closest monitor measuring NO₂ concentrations is the Madera-Pump Yard monitoring station, located approximately 27 miles northwest of the Project area. For PM₁₀, the closest monitor is the Fresno-Drummond monitoring station located approximately 36 miles east of the Project area. Finally, for SO₂, the Fresno-Garland monitoring station is the closest, located approximately 36 miles east of the proposed Project. For the purposes of this analysis, these monitoring locations were considered representative of the air quality experienced in the vicinity of the Project. Table 3 summarizes the most recent air quality data from 2016 through 2018 with the number of days exceeding the ambient air quality standards.

Table 3. Local Ambient Air Quality Monitoring Data for the Years 2016-2018

Averaging Period	2016	2017	2018
Ozone (O₃) – Tranquillity, California Monitoring Station (AQS Site ID: 06-019-2009)			
1-hour Maximum Concentration (ppm)	0.093	0.087	0.088
Number of days exceeding CAAQS = 0.09 ppm	0	0	0
8-hour Maximum Concentration	0.081	0.076	0.083
Number of days exceeding CAAQS = 0.070 ppm	21	10	7
Number of days exceeding NAAQS = 0.070 ppm	19	10	7
Nitrogen Dioxide (NO₂) – Madera-Pump Yard, California Monitoring Station (AQS Site ID: 06-039-0004)			
1-hour Maximum Concentration (ppb)	34	46	46
Number of days exceeding CAAQS = 180 ppb	0	0	0
Number of days exceeding NAAQS = 100 ppb	0	0	0
Annual Average Concentration (ppm) (53 ppb)	6	6	6
Carbon Monoxide (CO) – Tranquillity, California Monitoring Station (AQS Site ID: 06-019-2009)			
1-hour Maximum Concentration (ppm)	0.8	0.9	0.8
Number of days exceeding CAAQS = 20 ppm	--	--	--
Number of days exceeding NAAQS = 35 ppm	0	0	0
8-hour Maximum Concentration	0.4	0.5	0.7
Number of days exceeding CAAQS = 9.0 ppm	--	--	--
Number of days exceeding NAAQS = 9.0 ppm	0	0	0

Averaging Period	2016	2017	2018
Coarse Particulate Matter (PM₁₀) – Fresno-Drummond, California Monitoring Station (AQS Site ID: 06-039-2010)			
24-hour Maximum Concentration (µg/m ³)	88	121	155
Number of days exceeding CAAQS = 50 µg/m³	99	112	116
Number of days exceeding NAAQS = 150 µg/m³	0	0	0
Annual Average Concentration (state method) (µg/m ³) (20 µg/m³)	38	44	46
Fine Particulate Matter (PM_{2.5}) – Tranquillity, California Monitoring Station (AQS Site ID: 06-019-2009)			
24-hour Maximum Concentration (µg/m ³)	40	62	95
Number of days exceeding NAAQS = 35 µg/m³	2	6	16
Annual Average Concentration (µg/m ³) (12 µg/m³)	7.7	8.3	11.1
Sulfur Dioxide (SO₂) – Fresno-Garland, California Monitoring Station (AQS Site ID: 06-019-0011)			
1-hour Maximum Concentration (ppm)	0.008	0.0077	0.0072
Number of days exceeding NAAQS = 0.075 ppm	0	0	0
24-hour Maximum Concentration (ppm)	0.002	0.0023	0.0026
Number of days exceeding NAAQS = 0.14 ppm	0	0	0
Annual Average Concentration (ppm) (0.03 ppm)	0.00046	0.00062	0.00062

µg/m³ – microgram per cubic meter; CAAQS – California ambient air quality standards; NAAQS – National ambient air quality standards; ppb – parts per billion; ppm – parts per million

Sources: CARB 2016; EPA 2016

2.4 SIGNIFICANCE CRITERIA AND METHODOLOGY

2.4.1 Thresholds of Significance

2.4.1.1 California Environmental Quality Act Guidelines

The State of California has developed guidelines to address the significance of air quality impacts based on Appendix G of the CEQA Guidelines, which indicates that a project has significant air quality impact if the following occurs:

1. Conflict with or obstruct implementation of the applicable air quality plan;
2. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard;
3. Expose sensitive receptors to substantial pollutant concentrations; and
4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

2.4.1.2 San Joaquin Valley Air Pollution Control District

In addition to the air quality criteria above, SJVAPCD's Guidance for Assessing and Mitigating Air Quality includes one additional criterion as follows:

5. Would the project violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Criteria Pollutants

The Guidance for Assessing and Mitigating Air Quality Impacts has established emissions-based thresholds of significance for criteria pollutants (SJVAPCD 2015a), which are shown in Table 4. The SJVAPCD has established significance thresholds for construction emissions and operational permitted

and non-permitted equipment and activities, and it recommends evaluating impact significance for these categories separately. These thresholds of significance are based on a calendar-year basis, although construction emissions are assessed on a rolling 12-month period.

Table 4. SJVAPCD Air Quality Thresholds of Significance – Criteria Pollutants

Pollutant	Construction Emissions (tons per year)	Operational Emissions (tons per year)	
		Permitted Equipment and Activities	Non-Permitted Equipment and Activities
ROG	10	10	10
NO _x	10	10	10
CO	100	100	100
SO _x	27	27	27
PM ₁₀	15	15	15
PM _{2.5}	15	15	15

Source: SJVAPCD 2015a

In addition to the annual emissions mass thresholds described in Table 4, the SJVAPCD has also established screening criteria to determine whether a project would result in a CO hotspot at affected roadway intersections (SJVAPCD 2015a). If neither of the following criteria are met at any of the intersections affected by the project, the project would result in no potential to create a violation of the CO standard:

- A traffic study for the project indicates that the level of service (LOS) on one or more streets or at one or more intersections in the project vicinity will be reduced to LOS E or F.
- A traffic study indicates that the project will substantially worsen an already existing LOS F on one or more streets or at more or more intersections in the project vicinity.

Ambient Air Quality Analysis

The SJVAPCD recommends that an Ambient Air Quality Analysis (AAQA) be performed when on-site emissions of any criteria pollutant would equal or exceed 100 pounds per day. If emissions of one criteria pollutant exceeds the threshold, then all criteria pollutants are to be modeled. In the AAQA, air pollutant concentrations are determined by conducting air dispersion modeling, adding the resulting concentrations to ambient background levels, and comparing to the applicable ambient air quality standard. A project would be considered to have a significant impact if its emissions are predicted to cause or contribute to a violation of an ambient air quality standard by exceeding any CAAQS or NAAQS. If an exceedance of the CAAQS or NAAQS is predicted, modeled concentrations may be compared to significant impact levels (SILs) to assess whether a project's emissions would contribute significantly to an existing violation of the CAAQS or NAAQS.

Toxic Air Contaminants

The SJVAPCD has established thresholds of significance for combined TAC emissions from the operations of both permitted and non-permitted sources (SJVAPCD 2015a). Projects that have the potential to expose the public to TACs in excess of the following thresholds would be considered to have a significant air quality impact:

- Probability of contracting cancer for the maximally exposed individual equals or exceeds 20 in 1 million people.
- Hazard Index for acute and chronic noncarcinogenic TACs equals or exceeds 1 for the maximally exposed individual.

Odors

As described in the Guidance for Assessing and Mitigating Air Quality Impacts, due to the subjective nature of odor impacts, there are no quantitative thresholds to determine if potential odors would have a significant impact (SJVAPCD 2015a). Projects must be assessed for odor impacts on a case-by-case basis for the following two situations:

- **Generators:** Projects that would potentially generate odorous emissions proposed to locate near existing sensitive receptors or other land uses where people may congregate.
- **Receivers:** Residential or other sensitive receptor projects or other projects built for the intent of attracting people locating near existing odor sources.

2.4.2 Approach and Methodology

Air quality and global climate change impacts associated with the proposed Project are related to emissions that would occur during construction and subsequent operation of the proposed Project. The principal sources of pollutants during construction would be earth-moving activities, construction equipment, trucks bringing materials to the site, and construction crew commuting vehicles. There are numerous air quality modeling tools available to assess air quality impacts of the Project. Emissions were estimated based on the air emission modeling software package CalEEMod. The model contains data specific to each California air basin. The model quantifies direct emissions from construction and operations (including vehicle use), as well as indirect emissions, such as GHG emissions from energy use, solid waste disposal, vegetation planting and/or removal, and water use. For calculation of on-road (off-site) mobile sources, CalEEMod uses the EMFAC emissions model. While the most recently approved version of the model is EMFAC 2017, the current version incorporated into CalEEMod is EMFAC 2014. Since EMFAC 2014 is currently built into CalEEMod, it was used for this assessment. Additionally, it was determined that the use of EMFAC 2017 would not likely change the conclusions of the study, and it was therefore not utilized for this assessment.

Construction

The construction processes are anticipated to occur during a period of approximately 16 months. Project construction would consist of three major stages. The first stage would include mobilization, site preparation, fencing, laydown, and trenching; the second stage would involve trench backfill and installation of cables, pile and racking, inverters, PV modules, and ESS units; the third stage would continue installation of inverters, pile racking, PV modules, BESS units, and also include commissioning and testing.

Grubbing and grading would occur on the site to achieve the required surface conditions. Because the site is already mostly flat, grading would be minimal. The site's cut and fill would balance, and no importing or exporting of materials would be necessary. Water for dust control and other construction needs would come from onsite wells or be trucked to the site, and this assessment conservatively assumes water will be trucked to the site. The Project would comply with SJVAPCD Rule 8021 to control dust emissions generated during grading activities.

The onsite construction workforce would consist of laborers, craftspeople, supervisory personnel, and support personnel. The onsite assembly and construction workforce is expected to reach a peak of approximately 550 workers; the average number of workers onsite is anticipated to be approximately 200 to 250. On average, it is anticipated that each worker will generate one round trip to the Project per workday. Most workers would commute to the site from nearby communities such as Mendota, Tranquillity, or San Joaquin, with some traveling from more-distant areas such as Fresno, Visalia, or

Hanford. Workers would reach the site using existing roads, accessing the Project site from Highway 33 or West Manning Avenue. Construction would occur primarily during daylight hours.

Construction is anticipated to commence in early 2022. Construction scenario assumptions, including phasing, equipment, and vehicle trips, were based on information provided by the applicant. The CalEEMod model divides the construction processes into phases, which can be modified to fit Project specifications. As a conservative analysis, construction of the Project would occur over the course of 16 months, but the total duration of days were used to calculate overall daily emissions. The daily timeframe is important since construction emissions are related directly to the intensity of daily construction activities (emissions increase as the overall amount of construction activity increases). Actual construction may proceed at a less intensive pace, which would result in lower daily emissions. It was also assumed that construction equipment would operate for 5 days per week during Project construction.

Each construction phase has the potential to generate the following: (1) fugitive dust emissions resulting from soil disturbance activity; (2) emissions of air pollutants from fuel combustion in construction equipment; and (3) emissions of air pollutants from fuel combustion in vehicles used for worker commute and material hauling and construction debris disposal. Table 5 shows the construction schedule and Table 6 shows the construction equipment.

*Average values were used to calculate Annual emissions, while Peak values were used to calculate Daily emissions.

2.4.2.1 Operation

Once constructed, the Project would operate seven days per week and 365 days per year. Only occasional, on-site maintenance is expected to be required following commissioning. Initially, personnel would likely visit the Project area daily or weekly, but it is anticipated that eventually maintenance visits would be reduced to once a month or less. Operations and maintenance activities would require up to four workers performing visual inspections, monitoring plant performance, executing minor repairs, and responding to needs for plant adjustment. On intermittent occasions, the presence of 5 to 30 workers may be required for repairs or replacement of equipment, panel cleaning, and other specialized maintenance. However, due to the self-operating nature of the facilities, such actions would likely occur infrequently. The expected maintenance would generate little traffic during operations. Operations and maintenance vehicles would include light duty trucks (e.g., pickup, flatbed) and other light equipment for maintenance and module washing. Heavy equipment would not be utilized during normal operation.

Minimal water would be required for panel washing activities and general maintenance. The need for panel washing would be infrequent (e.g., months to years between washings) and determined based on operating considerations, including actual soiling of the PV panels and any expected benefit from cleaning. Sanitary facilities for operations would be provided through the septic system at the proposed operations and maintenance building.

An emergency generator for use in the event that the regional transmission system fails would also be located at the substation; this emergency generator would provide emergency power until the regional transmission system restores operations. The generator would be powered by propane or diesel and is estimated to be 49 kilowatts or less in size.

Operational emissions were estimated using CalEEMod to include area, energy, and mobile source emissions. Area sources include architectural coatings such as paints and primers which result in ROG off-gassing. These emissions were calculated based on building square footage and default model assumptions for reapplication rate. Energy sources include electricity usage and on-site power generation, including the diesel-powered emergency generator. The emergency generator would operate

up to 50 hours per year per the CARB Air Toxics Control Measure, and up to two hours per month for testing and maintenance. Electricity used on site would be generated off site, contributing to indirect emissions. Therefore, emissions from electricity use were only calculated for GHGs. Mobile sources would include motor vehicles (i.e. pickup trucks or light duty trucks) traveling to and from the site for monthly or yearly maintenance. Based on conservative estimates, the Project is anticipated to have up to 2,086 trips per year, accounting for regular operation and maintenance activities of four full-time-equivalent staff.

2.4.2.2 Ambient Air Quality Analysis

Per the Guidance for Assessing and Mitigating Air Quality Impacts, an AAQA should be performed if the emissions of a pollutant from equipment used for on-site construction or on-site operation exceeds 100 lb/day. The Project is expected to exceed 100 lb/day for at least one pollutant (specifically CO) during on-site construction. Therefore, an AAQA was conducted to determine if Project construction emissions are predicted to cause or contribute to a violation of an ambient air quality standard by exceeding any CAAQS or NAAQS. Since operational activities would be minimal and are well below the modeling threshold, ambient air quality modeling was not performed for operational emissions.

Air dispersion modeling was performed using the American Meteorological Society/EPA Regulatory Model (AERMOD). On-site construction emissions of criteria pollutants (CO, NO₂, PM₁₀, PM_{2.5}, and SO₂) were modeled using the CalEEMod estimated daily on-site Project emissions (lb/day). The modeled concentrations were added to background concentrations and results were compared to ambient air quality standards (CAAQS and NAAQS) and significant impact levels established by the EPA. Modeling parameters include the following:

- Model – Modeling was conducted using the most recent version of AERMOD (version 19191).
- Meteorological Data – The latest 5-year meteorological data (2007-2011) for the Lemoore station (ID 23110) was processed and provided by SJVAPCD for input to AERMOD.
- Land Use Determination – Inspection of current aerial photography for the area within 3-km of the facility indicates that the majority of this area is primarily undeveloped. Therefore, rural dispersion coefficients were used.
- Terrain – Elevations were obtained using AERMAP and USGS terrain data. AERMAP includes processing routines that extract National Elevation Data (NED) at 10-meter spacing based on the NAD83 North American Datum.
- Receptors – Receptors were placed at 25 meter intervals along the facility fence line. In addition, a nested Cartesian grid was extended out from the fence line at the following intervals and distances:
 - 25-meter spacing from the facility boundary to 100 meters;
 - 50-meter spacing from 100 meters to 250 meters;
 - 100-meter spacing from 250 meters to 500 meters;
 - 250-meter spacing from 500 meters to 1,000 meters; and
 - 500-meter spacing from 1,000 meters to 2,000 meters.
- Source Characterizations – On-site construction emissions were modeled as a single raised area source, assuming at least 10% of the total site area (approximately 120 acres) would have active construction activities at any one time. A release height of 5 meters and initial vertical dimension

of 1 meter were used for diesel equipment and truck exhaust. The active area was conservatively assumed to occur in one square area in the southeast corner of the Project site (prevailing wind direction from the northwest) to be representative of a day of concentrated activity.

The ambient air quality assessment was conducted per the Policy for District Rule 2201 AAQA Modeling (SJVAPCD 2014), consisting of a progressive three level approach with each level consisting of 2 steps. The assessment begins with the Level 1 approach, and only proceeds to the next level if necessary.

- Level 1 AAQA – All required criteria pollutants and averaging periods (1-hr, 3-hr, 8-hr, 24-hr, and Period) are modeled with a normalized emission rate (1 g/s) for each source. For each pollutant/averaging period, the maximum predicted concentration is then calculated by multiplying the result by the emission rates generated in CalEEMod.
 - Step 1 – The maximum predicted concentrations are summed with their corresponding background concentrations and compared to their respective ambient air quality standard (i.e. NAAQS and CAAQS). For each pollutant and averaging period, if the maximum predicted concentrations do not exceed ambient air quality standards then the analysis is complete and no further action is required. If the maximum predicted concentration exceeds a CAAQS or NAAQS, then the analysis proceeds to Step 2 for the specific pollutants and corresponding averaging periods.
 - Step 2 – If the maximum predicted concentration exceeds a CAAQS or NAAQS, it is compared to a corresponding Significant Impact Level (SIL). If the maximum predicted concentration does not exceed the corresponding SIL, then the analysis is complete for that pollutant and averaging period and no further action is required. If the maximum predicted concentration exceeds the SIL, then the analysis should proceed to Level 2 AAQA.
- Level 2 AAQA – Each pollutant is modeled separately using pollutant-specific emission rates (generated in CalEEMod) rather than normalized emission rates. For each pollutant/averaging period, the maximum predicted concentration is selected for evaluation. For NO₂ modeling, appropriate NO_x-to-NO₂ conversion methods may be used. For this analysis, ARM2 conversion methods were applied. Additionally, predicted NO₂ concentrations are based on the 8th highest value.
 - Step 1 – The maximum predicted concentrations are summed with their corresponding background concentrations and compared to their respective CAAQS and NAAQS. If the maximum predicted concentrations do not exceed the corresponding AAQS, then no further evaluation is required. If the maximum predicted concentration exceeds an AAQS, then proceed to Step 2 for the specific pollutants and corresponding averaging periods.
 - Step 2 – If the maximum predicted concentration exceeds an AAQS in Step 1, compare the result with the corresponding SIL. If the maximum predicted concentration does not exceed a SIL threshold, then no further evaluation is needed. If the maximum predicted concentration exceeds the corresponding SIL, then proceed to Level 3 AAQA
- Level 3 AAQA – This level applies to NO₂ only. The approach is similar to Level 2, except that yearly ozone and NO₂ background data may be used.

2.4.2.3 Health Risk Assessment

A HRA was conducted for Project construction emissions following the methodologies prescribed in the California Environmental Protection Agency/Office of Environmental Health Hazard Assessment's

(OEHHA's) Air Toxics Hot Spots Program Risk Assessment Guidelines – Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2015). Since operational activities would be limited to routine inspection and maintenance, no quantitative HRA was performed.

The HRA incorporated modeling results generated as part of the ambient air quality analysis. Therefore, the discussion of dispersion modeling input parameters in the Ambient Air Quality Analysis section above also applies to the HRA. For risk assessment purposes, PM₁₀ in diesel exhaust is considered DPM, originating mainly from off-road equipment. For the construction HRA modeling, DPM from diesel-fueled off-road construction equipment and trucks was the only TAC evaluated.

To conduct the HRA, X/Q values from AERMOD corresponding to the nearest residence, and on-site construction emissions of DPM (calculated in CalEEMod) were input into HARP 2. HARP 2 is a software suite used to assist with the requirements of the Air Toxics “Hot Spots” Program (AB 2588) and incorporates the requirements of the latest version of OEHHA Air Toxics Hot Spot Risk Assessment guidelines (OEHHA 2015).

2.5 IMPACT ANALYSIS

2.5.1 Would the Project conflict with or obstruct implementation of the applicable air quality plan?

Less than significant impact. The Project would not conflict with existing land uses or result in population growth. The Project would comply with applicable SJVAPCD rules and regulations, such as Regulation VIII (Fugitive PM₁₀ Prohibitions) and IX (Mobile and Indirect Sources) which are discussed in detail in Section 2.2.3.1. In addition, the Project would not result in a long-term increase in the number of trips or increase the overall vehicle miles traveled in the area. Vendor truck and worker vehicle trips would be generated during the proposed construction activities but would cease after construction is completed. Unmitigated NO_x and CO emissions during construction would exceed the SJVAPCD significance threshold. However, as discussed in Section 2.5.2, compliance with SJVAPCD Regulation VIII and Rule 9510 would reduce emissions to less than significant. During the longer-term operational phase, the Project would have routine inspection and maintenance activities that would result in a net increase in emissions although, as discussed in Section 2.5.2, the increase in emissions would not exceed any significance threshold or violate any SJVAPCD rule or regulation.

2.5.2 Would the project violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Construction Emissions

Less Than Significant Impact. The SJVAPCD has established annual significance thresholds to address pollution sources associated with general construction activities, such as the operation of on-site construction equipment, fugitive dust from site grading activities, and travel by construction workers. In addition to the SJVAPCD annual significance thresholds, the SJVAPCD also recommends the use of daily emissions thresholds for the evaluation of project impacts on localized ambient air quality. Based on these recommended thresholds, the proposed project would result in a significant contribution to localized ambient air quality if on-site emissions would exceed a daily average of 100 pounds per day (lbs/day) for any of the pollutants evaluated.

The Project would comply with SJVAPCD Rule 8021 to control dust emissions generating during grading activities. Standard construction practices that would be employed to reduce fugitive dust emissions include:

- Develop a dust control plan to outline how the Project will comply with Rule 8021 and minimize fugitive dust during construction,

- Minimize and cleanup trackout onto paved roads,
- Cover haul trucks,
- Rapid cleanup of Project-related trackout or spills on paved roads,
- Minimize grading and soil movement when winds exceed 30 miles per hour, and
- Implement a speed limit of 15 miles per hour during all construction phases for vehicles travelling on un-paved roads.

The Project would also consider the use of Tier 4 engines for construction equipment that would reduce NO_x and DPM emissions. In addition to dust control measures, the use of Tier 4 engines was incorporated to CalEEMod as a mitigation measure. For the purpose of this assessment, it was assumed that all off-road diesel equipment greater than 100 horsepower (hp) would meet USEPA Tier 4 off-road emission standards or equivalent.

Project construction emissions were calculated using the CalEEMod. Table 7 presents the estimated maximum annual emissions generated during construction of the Project. Table 8 presents the estimated maximum daily emissions generated during construction of the Project. Both unmitigated and mitigated emissions scenarios are presented, along with both on-site and off-site contributions. Detailed emission calculations are provided in Appendix A.

Table 7. Estimated Maximum Annual Construction Criteria Air Pollutant Emissions

Max. Rolling 12-month	Emissions (tons per year)					
	ROG	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Unmitigated	2.04	16.16	15.99	0.05	5.21	2.42
On-Site	1.40	14.63	11.71	0.03	3.42	1.93
Off-Site	0.64	1.53	4.28	0.02	1.79	0.49
Mitigated	1.36	7.36	19.79	0.05	2.96	1.21
On-Site	0.72	5.83	15.51	0.03	1.31	0.76
Off-Site	0.64	1.53	4.28	0.02	1.65	0.45
<i>SJVAPCD Threshold</i>	<i>10</i>	<i>10</i>	<i>100</i>	<i>27</i>	<i>15</i>	<i>15</i>
Threshold Exceeded?	No	No	No	No	No	No

Table 8. Estimated Maximum Daily Construction Criteria Air Pollutant Emissions

Max. Rolling 12-month	Emissions (lbs/day)					
	ROG	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Unmitigated	29.9	260.9	223.8	0.9	78.2	34.4
On-Site	17.5	182.4	138.8	0.4	45.2	25.3
Off-Site	12.4	78.5	85.0	0.5	33.0	9.1
Mitigated	21.3	149.8	269.4	0.9	47.8	18.4
On-Site	8.9	71.3	184.4	0.4	17.3	9.9
Off-Site	12.4	78.5	85.0	0.5	30.5	8.5
<i>SJVAPCD Threshold</i>	<i>100</i>	<i>100</i>	<i>100</i>	<i>100</i>	<i>100</i>	<i>100</i>
Threshold Exceeded?	No	No	Yes	No	No	No

As shown in Table 7, annual construction emissions would not exceed the SJVAPCD annual significance thresholds for any pollutants. As shown in Table 8, maximum daily on-site construction emissions would not exceed SJVAPCD's localized significance threshold of 100 lb/day for ROG, NO_x, SO_x, PM₁₀, or PM_{2.5}. However, maximum daily on-site constructions emissions of CO would exceed 100 lbs/day. SJVAPCD recommends that an AAQA be conducted when on-site emissions from any criteria pollutant would equal or exceed applicable significance thresholds or when on-site emissions would equal or exceed 100 lbs/day for any pollutant. Therefore, an AAQA was performed for the Project.

Using the tiered methodology described in Section 2.4.2.3, the Project's potential construction impacts on ambient air quality were assessed. Table 9 presents a summary of results of the Level 1 (Step 1) AAQA. Table 10 presents a summary of the results of the Level 1 (Step 2) AAQA. Table 11 presents a summary of the results of the Level 2 (Step 1) AAQA. Detailed Ambient Air Quality Analysis results are provided in Appendix B. AERMOD dispersion modeling input and output files are provided in Appendix C.

Table 9. Mitigated Construction Ambient Air Quality Analysis – LEVEL 1 (Step 1)

PM _{2.5} - Fugitive	24-hour	0.10	13.8	1.4	2.5	PASS

Table 11. Mitigated Construction Ambient Air Quality Analysis – LEVEL 2 (Step 1)

Pollutant	Averaging Period	Modeled Emission Rate (g/s)	Project Concentration ($\mu\text{g}/\text{m}^3$)	Ambient Back-ground Concentration ($\mu\text{g}/\text{m}^3$)	Total Concentration ($\mu\text{g}/\text{m}^3$)	CAAQS ($\mu\text{g}/\text{m}^3$)	NAAQS ($\mu\text{g}/\text{m}^3$)	LEVEL 2 (Step 1) Significance
NO ₂	1-hour	1.12	71	86	157	339	188	PASS

As demonstrated in Tables 9, 10, and 11, the Project construction activities would generate ambient concentrations less than the applicable thresholds and are therefore less than significant.

Operational Emissions

Less Than Significant Impact. Project operational emissions were estimated using CalEEMod to include area, energy, and mobile source emissions. This included solvent emissions from paints and primers, potential emergency generator emissions, and vehicle emissions from maintenance vehicles. Table 12 presents the maximum annual operational emissions in tons per year with a comparison to SJVAPCD thresholds. Detailed emissions calculations are provided in Appendix A.

Table 12. Estimated Maximum Annual Operational Criteria Air Pollutant Emissions

Emission Source	ROG	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
	Tons per Year					
Area, Energy, Mobile, and Stationary Sources	0.01	0.05	0.07	0.0003	0.02	0.006
<i>SJVAPCD Threshold</i>	10	10	100	27	15	15
Threshold Exceeded?	No	No	No	No	No	No

Table 13. Estimated Maximum Daily Operational Criteria Air Pollutant Emissions

Emission Source	ROG	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
	lbs/day					
Area, Energy, Mobile, and Stationary Sources	0.06	0.32	0.49	0.002	0.15	0.04
<i>SJVAPCD Threshold</i>	100	100	100	100	100	100
Threshold Exceeded?	No	No	No	No	No	No

As shown in Tables 12 and 13, operational emissions would not exceed the SJVAPCD thresholds for ROG, NO_x, CO, SO_x, PM₁₀ and PM_{2.5}. Since operational activities would be minimal, including only routine inspection and maintenance, ambient air quality modeling was not required. Additionally, traffic associated with operations would be negligible and would not result in CO hotspots at intersections. Therefore, the operational impacts would be less than significant.

2.5.3 Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for O₃ precursors)?

Less Than Significant Impact. As discussed previously, the Project results in an increase in short-term emissions related to construction and an increase in long-term operational emissions for those pollutants and precursors (ROG and NO_x) for which the SJVAPCD is in non-attainment (O₃, PM₁₀ and PM_{2.5}). Although the Project site is located in a region that is in non-attainment for O₃, PM₁₀ and PM_{2.5}, the cumulative emissions associated with the Project would not be considerable as the emissions would fall below SJVAPCD thresholds. Under this condition, the Project would not make a cumulatively considerable contribution during construction or operations. Therefore, impacts would be less than significant. Additionally, the Project would not conflict with the SJVAPCD O₃, PM₁₀ or PM_{2.5} attainment plans, which address cumulative emissions in the Valley and account for emissions associated with construction activity.

2.5.4 Would the project expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. The Project consists of construction of a solar energy facility that may have the potential to affect nearby sensitive receptors. The nearest rural residences are located approximately 1,500 feet from the southeast corner of the Project site along Highway 33. As described previously, construction and operation of the Project would not result in emissions of criteria pollutants in excess of established thresholds.

In addition to the significance thresholds for criteria pollutants, SJVPACD has established significance thresholds for TAC emissions. In March 2015, the OEHHA published a revised Air Toxics Hot Spots Program Risk Assessment Guidelines – Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2015). All HRAs prepared for CEQA documents must follow SJVAPCD policies in conjunction with the OEHHA guidance. The SJVAPCD has developed a three-tiered approach, including Tier 1 (screening estimate), Tier 2 (project-specific modeling inputs), and Tier 3 (refined project-specific exposure parameters). Based on the Project information available, a Tier 3 analysis was performed.

The use of combustion equipment in Project construction activities could result in elevated concentrations of DPM, which could lead to an increase in cancer risk or chronic health impacts. The HRA was performed to estimate the potential cancer risk and health index at the maximally exposed receptors. Dispersion modeling conducted for the AAQA was also used for the HRA to determine the maximally exposed receptors. While HRAs generally focus on sensitive receptors (e.g., residences, schools, and hospitals), a full receptor grid surrounding the Project site was conservatively used. The CARB HARP2 model was used to model the resultant health risk using construction PM₁₀ emissions calculated in CalEEMod. While Project construction activity is only expected to last approximately 16 months, HARP2 only allows input of full-year exposure durations for activities lasting over one year. Conservatively, a two-year exposure duration was assumed. Table 14 presents the cancer risk and hazard index resulting from construction activities, with a comparison to SJVAPCD thresholds. AERMOD and HARP2 model input and output can be found in Appendix C.

Table 14. Construction Health Risk Assessment

Maximum Impact Receptor	Cancer Risk (Persons per Million)	Chronic Hazard Index
Unmitigated On-site Construction DPM	14.7	0.009

Mitigated On-site Construction DPM	6.2	0.004
<i>SJVAPCD Threshold</i>	<i>20</i>	<i>1</i>
Threshold Exceeded?	No	No

As shown in Table 14, the Project construction activities would emit TACs resulting in calculated cancer risk and chronic hazard below the SJVAPCD thresholds under both unmitigated and mitigated construction scenarios. Therefore, the Project is not expected to expose sensitive receptors to substantial pollutant concentrations. As such, localized impacts to off-site sensitive receptors would be less than significant and no mitigation measures would be necessary.

Since operational activities would be limited to routine inspection and maintenance, an operational HRA was not required and the impact would therefore be less than significant.

2.5.5 Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. During Project-related construction activities, various diesel-powered vehicles and equipment could create minor odors. These odors are not likely to be noticeable beyond the immediate vicinity and would be temporary and short-lived. Therefore, construction odor impacts would be less than significant. Long-term odors are associated typically with industrial projects involving use of chemicals, solvents, petroleum products, and other strong-smelling elements used in manufacturing processes. Odors also are associated with such uses as sewage treatment facilities and landfills. The Project involves no elements related to these types of uses. Therefore, no long-term odor impacts would occur with Project implementation.

3.0 GREENHOUSE GAS EMISSIONS

3.1 ENVIRONMENTAL SETTING

3.1.1 The Greenhouse Effect

Certain gases in the Earth's atmosphere, classified as GHGs, play a critical role in determining the earth's surface temperature. A GHG is any gas in the atmosphere that absorbs infrared radiation. As solar radiation enters the earth's atmosphere, a portion of the radiation is absorbed by the earth's surface, and a portion is reflected back through the atmosphere into space. The absorbed radiation is eventually emitted from the earth into the atmosphere, not as solar radiation, but as infrared radiation. Most solar radiation passes through GHGs; infrared radiation is selectively absorbed or "trapped" by GHGs as heat and then reradiated back toward the earth's surface, warming the lower atmosphere and the earth's surface. This phenomenon, known as the "greenhouse effect," is beneficial for maintaining a habitable climate on the earth. As the atmospheric concentrations of GHGs rise, however, the average temperature of the lower atmosphere gradually increases, thereby increasing the potential for indirect effects such as a decrease in precipitation as snow, a rise in sea level, and changes to plant and animal species and habitat.

Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one year to several thousand years). GHGs persist in the atmosphere long enough to be dispersed globally. Although the exact lifetime of any particular GHG molecule depends on multiple variables and cannot be pinpointed, scientific evidence reveals that more CO₂ is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, and other forms of sequestration. Of the total annual human-caused CO₂ emissions, approximately 54 percent is sequestered through ocean uptake, uptake by northern hemisphere forest regrowth, and other terrestrial sinks within a year, whereas the remaining 46 percent of human-caused CO₂ emissions remains stored in the atmosphere. The quantity of GHGs that it takes to ultimately result in climate change is not known precisely, although scientific evidence strongly indicates no single project would be expected to contribute measurably to a noticeable incremental change in the global average temperature.

3.1.2 Greenhouse Gases and Global Warming Potential

GHGs are emitted by natural processes and human activities. Natural GHG sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Human activities known to emit GHGs include industrial manufacturing, utilities, transportation, residential, and agricultural activities. The GHGs that enter the atmosphere because of human activities are CO₂, CH₄, N₂O, fluorinated carbons (hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆).

CO₂ is an odorless, colorless gas with both natural and anthropogenic sources. Examples of natural sources are respiration of bacteria, plants, and animals, evaporation from oceans, and decomposition of organic matter. Human activities that emit CO₂ include burning coal, oil, natural gas, and wood.

CH₄ is a flammable gas that is the main component of natural gas. When burned in the presence of oxygen, CO₂ and water are released. There are no direct health effects from exposure to CH₄. Sources of CH₄ include decay of organic material, natural gas fields, cattle, and landfills.

N₂O is a colorless gas that can cause euphoria, dizziness, and slight hallucinations when exposed to higher concentrations. Sources include agricultural sources (e.g. microbial processes in soil and water, fertilizer) and industrial processes (e.g. fossil fuel-fired power plants, vehicle emissions, nylon production).

Fluorinated Gases are synthetic and emitted from a variety of industrial processes.

HFCs are man-made chemicals used as a substitute for CFCs (chlorofluorocarbons) for automobile air conditioners and refrigerants.

PFCs are very stable and do not break down through the chemical processes in the lower atmosphere and they have long lifetimes (between 10,000 and 50,000 years). The two main sources of PFCs are primary aluminum production and semiconductor manufacturing.

SF₆ is an inorganic, colorless, odorless, nontoxic, nonflammable gas used for insulation in electric power transmission and distribution equipment, semiconductor manufacturing, the magnesium industry, and as a tracer gas for leak detection.

Global Warming Potential

The Intergovernmental Panel on Climate Change developed the global warming potential (GWP) concept to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The GWP of a GHG is defined as the ratio of the time-integrated radiative forcing from the instantaneous release of one kilogram of a trace substance relative to that of one kilogram of a reference gas. The reference gas used is CO₂. Therefore, GWP-weighted emissions are measured in metric tons (MT) of CO₂ equivalent (CO_{2e}). It was assumed that the GWP for CH₄ is 25 (which means that emissions of 1 MT of CH₄ are equivalent to emissions of 25 MT of CO₂), the GWP for N₂O is 298, and the GWP for SF₆ is 22,800 based on the Intergovernmental Panel on Climate Change Fourth Assessment Report (IPCC 2007).

3.2 REGULATORY SETTING

3.2.1 Federal Regulations

The U.S. Supreme Court ruled on April 2, 2007, that CO₂ is an air pollutant as defined under the CAA, and that the EPA has the authority to regulate emissions of GHGs. Responding to the mounting issue of climate change, the EPA has taken actions to regulate, monitor, and potentially reduce GHG emissions.

Mandatory Greenhouse Gas Reporting Rule

On September 22, 2009, the EPA issued a final rule for mandatory reporting of GHGs from large GHG emissions sources in the United States. In general, this national reporting requirement will provide the EPA with accurate and timely GHG emissions data from facilities that emit 25,000 metric tons or more of CO₂ per year. This publicly available data allows the reporters to track their own emissions, compare them to similar facilities, and help identify cost effective opportunities to reduce emissions in the future. Reporting is at the facility level, except that certain suppliers of fossil fuels and industrial GHGs along with vehicle and engine manufacturers report at the corporate level. An estimated 85 percent of the total United States GHG emissions, from approximately 10,000 facilities, are covered by this final rule.

Endangerment and Cause or Contribute Findings for Greenhouse Gases under the Clean Air Act

On December 7, 2009, the EPA adopted its Proposed Endangerment and Cause or Contribute Findings for Greenhouse Gases under the CAA (Endangerment Finding). The Endangerment Finding is based on Section 202(a) of the CAA, which states that the Administrator (of EPA) should regulate and develop standards for "emission[s] of air pollution from any class of classes of new motor vehicles or new motor vehicle engines, which in [its] judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare." The rule addresses Section 202(a) in two distinct findings. The first addresses whether the concentrations of the six key GHGs (CO₂, CH₄, N₂O, HFCs, PFCs, and SF₆) in the atmosphere threaten the health and welfare of current and future generations. The second addresses whether the combined emissions of GHGs from new motor vehicles and motor vehicle engines contribute to atmospheric concentrations of GHGs and therefore the threat of climate change.

The Administrator found that atmospheric concentrations of GHGs endanger the public health and welfare within the meaning of Section 202(a) of the CAA. The evidence supporting this finding consists of human activity resulting in “high atmospheric levels” of GHG emissions, which are most likely responsible for increases in average temperatures and other climatic changes. Furthermore, the observed and projected results of climate change (e.g., higher likelihood of heat waves, wildfires, droughts, sea level rise, and higher intensity storms) are a threat to the public health and welfare. Therefore, GHGs were found to endanger the public health and welfare of current and future generations.

The Administrator also found that GHG emissions from new motor vehicles and motor vehicle engines are contributing to air pollution, which is endangering public health and welfare. EPA’s final findings respond to the 2007 U.S. Supreme Court decision that GHGs fit within the CAA definition of air pollutants. The findings do not in and of themselves impose any emission reduction requirements but rather allow the EPA to define the GHG standards proposed earlier in 2009 for new light-duty vehicles as part of the joint rulemaking with the Department of Transportation.

Various subsequent federal rulemakings limit GHG emissions from fossil fuel-fired power plants through EPA’s major stationary source permitting program and through EPA’s New Source Performance Standards (NSPS). These rulemakings have been subject to court challenges and political manipulation, such that applicants for air permits are required to evaluate the current status of the regulatory requirements. These GHG rules do not apply to the activities associated with the Project.

3.2.2 State Regulations

While climate change has been a concern since at least 1988, the efforts devoted to GHG emissions reduction and climate change policy have increased dramatically in recent years. In 2002, California passed AB 1493, which requires CARB to develop and implement regulations to reduce automobile and light truck GHG emissions beginning with the 2009 model year. In June 2005, Executive Order S-3-05 was signed to reduce California’s GHG emissions to: (1) 2000 levels by 2010; (2) 1990 levels by the 2020; and (3) 80 percent below the 1990 levels by the year 2050. In 2006, this goal was further reinforced with the passage of AB 32, the Global Warming Solutions Act of 2006. AB 32 sets the same overall GHG emissions reduction goals while further mandating that CARB create a plan (Scoping Plan), which includes market mechanisms, and implement rules to achieve “real, quantifiable, cost-effective reductions of greenhouse gases.” SB 32 codifies the emissions reduction goal of 40% below 1990 levels by 2030.

In 2002, SB 1078 established Renewable Portfolio Standard (RPS), which required an annual increase in renewable generation by the utilities with a goal of 20% by 2010. SB X1-2 expanded the RPS by establishing a renewable energy target of 20% of the total electricity sold to retail customers in California per year by 2013, and 33% by 2020 and subsequent years. SB 350 further expanded the RPS by establishing a goal of 50% of the total electricity sold to retail customers in California per year by 2030.

Senate Bill (SB) 97 acknowledges that climate change is a prominent environmental issue that requires analysis under CEQA. CEQA requires that lead agencies consider the reasonably foreseeable adverse environmental effects of projects they are considering for approval. GHG emissions can affect the environment adversely because they contribute, cumulatively, to global climate change. Thus, GHG emissions require consideration in CEQA documents.

3.2.3 Local Regulations

SJVAPCD

In 2009, the SJVAPCD Governing Board adopted the *Guidance for Valley Land-use Agencies in Addressing GHG Emission Impacts for New Projects under CEQA* (SJVAPCD 2009). The SJVAPCD found that the effects of project-specific emissions to be cumulative, and without mitigation, their

incremental contribution to global climate change could be considered cumulatively considerable. The SJVAPCD found that this cumulative impact is best addressed by requiring all projects to reduce their GHG emissions, whether through project design elements or mitigation.

For development projects, best performance standards (BPS) would include project design elements, land use decisions, and technologies that reduce GHG emissions. While the SJVAPCD has adopted BPS for several types of stationary sources (e.g., boilers), it has not developed BPS for land development projects. Projects implementing any combination of BPS, and/or demonstrating a total 29 percent reduction in GHG emissions from business-as-usual, would be determined to have a less than significant individual and cumulative impact on global climate change (SJVAPCD 2015a).

Fresno Council of Governments

SB 375 requires metropolitan planning organizations to prepare an SCS in their RTP. As discussed in Section 2.2.3.2, the FCOG developed the 2014 RTP/SCS, which establishes a development pattern for the region that, when integrated with the transportation network and other policies and measures, would reduce GHG emissions from transportation. Specifically, the 2014 RTP/SCS links the goals of sustaining mobility with the goals of fostering economic development; enhancing the environment; reducing energy consumption; promoting transportation-friendly development patterns; and encouraging all residents affected by socioeconomic, geographic, and commercial limitations to be provided with fair access. The 2014 RTP/SCS does not require that local general plans, specific plans, or zoning be consistent with it but provide incentives for consistency for governments and developers.

3.3 SIGNIFICANCE CRITERIA AND METHODOLOGY

3.3.1 Thresholds of Significance

The State of California has developed guidelines to address the significance of greenhouse gas impacts based on Appendix G of the CEQA Guidelines, which indicates that a project has significant air quality impact if the project:

1. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; and
2. Conflict with an applicable plan, policy, or regulations adopted for the purpose of reducing the emissions of greenhouse gases.

In the *Guidance for Valley Land-Use Agencies in Addressing GHG Emission Impacts for New Projects Under CEQA* and the policy *Addressing GHG Emission Impacts for Stationary Source Projects Under CEQA When Serving as the Lead Agency*, best performance standards (BPS) are used to assess significance of project specific GHG emissions on global climate change during the environmental review process. However, SJVAPCD's adopted BPS are specifically directed at reducing GHG emissions from stationary sources; therefore, the adopted BPS would not generally be applicable to the Project as the Project would not be a stationary source of emissions. The SJVAPCD guidance does not limit a lead agency's authority in establishing its own process and guidance for determining significance of project related impacts on global climate change. SJVAPCD supports the use of the interim thresholds as established by the California Air Pollution Control Officers Association (CAPCOA) when adopted thresholds are not applicable. As such, for the purposes of establishing a quantitative threshold for GHG emissions, the interim threshold for operational emissions of industrial projects established by CAPCOA is used herein. This threshold is consistent with California's climate-stabilization target (identified in AB 32). GHG emissions include construction emissions annualized over the 30-year life of the Project, as well as operational emissions.

Following CAPCOA's analysis of development applications in various cities, it was determined that the threshold of 900 MT CO_{2e} per year would achieve the objective of 90 percent capture and ensure that new development projects would keep the State of California on track to meet the goals of AB 32. The 900 MT CO_{2e} threshold is applied to evaluate whether the project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment.

3.3.2 Approach and Methodology

A GHG analysis is required to be included in CEQA documents for all non-exempt projects. SJVAPCD supports the use of the interim thresholds as established by the CAPCOA when adopted thresholds are not applicable. As such, for the purposes of establishing a quantitative threshold for GHG emissions, the interim threshold for operational emissions of industrial projects established by CAPCOA is used herein. CAPCOA recommended an interim 900 MT CO_{2e} screening level as a theoretical approach to identify projects that require further analysis and potential mitigation (CAPCOA 2008). CAPCOA proposes that projects amortize construction emissions over the 30-year lifetime of any given project. Project construction emissions can be amortized by calculating total construction period emissions and dividing by the 30-year lifetime of the project.

For this Project, the major source of GHG is the combustion of fuel in construction equipment, in vehicles used to haul materials, and in vehicles used by workers commuting to and from the site.

There are three types of GHG from fuel combustion, including CO₂, CH₄ and N₂O. GHG emissions are presented as CO_{2e}. CO_{2e} is computed based on global warming equivalence. The CH₄ global warming equivalence is 25 times that of CO₂, and the N₂O global warming equivalence is 298 times that of CO₂. Mathematically, the CO_{2e} can be represented by the following equation:

$$\text{CO}_2\text{e Emissions} = \text{CO}_2 \text{ Emissions} + 25 \times \text{CH}_4 \text{ Emissions} + 298 \times \text{N}_2\text{O Emissions}$$

The CalEEMod model was used to estimate the GHG emissions during the construction phase of the proposed Project. Based on the construction schedule, types and quantities of construction equipment, and haul trucks, etc., the maximum CO_{2e} emissions were estimated. The CalEEMod model provides a CO₂ profile only and does not quantify CO_{2e}, CH₄ and N₂O emissions. The analysis assumed that the CO₂ emissions are CO_{2e}. For typical diesel-fueled combustion equipment used in construction activities, the emissions factors adjusted with global warming equivalence are the following:

1. CO₂ emission factors are 22.4 pounds of CO_{2e} per gallon consumed;
2. CH₄ emission factors are 0.065 pounds of CO_{2e} per gallon consumed; and
3. N₂O emission factors are 0.068 pounds of CO_{2e} per gallon consumed.

As shown in these emission factors, the CO₂ profile is 99 percent of the total GHG emissions generated in combustion equipment. Therefore, the CO₂ emissions were assumed to be equivalent to the CO_{2e} emissions levels.

Additionally, GHG emissions are associated with fugitive emissions of SF₆ from gas-insulated switchgear equipment, such as the high voltage circuit breakers at the on-site substation. The SF₆ global warming equivalence is 22,800 times that of CO₂. The project will have no more than two high-voltage circuit breakers, each with up to 160 pounds of SF₆ for a total of up to 320 pounds, and a maximum leak rate of 0.5% per year. CO_{2e} resulting from SF₆ gas leakage can be represented by the following equation:

$$\text{CO}_2\text{e Emissions} = \text{SF}_6 \text{ gas contained in equipment (lbs)} \times 0.5\% \text{ leak rate} \times 0.0004536 \text{ MT/lb} \times 22,800$$

3.4 IMPACT ANALYSIS

3.4.1 Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Construction Emissions

Less Than Significant Impact. Construction of the Project would increase GHG generation, which can contribute to global climate change. This analysis is provided in response to recent heightened interest in the subject of global climate change and, specifically, in the California legislature's passage and the Governor's signing of AB 32, which is intended to control and reduce the emission of global warming gases in California; and SB 97, which directs the Office of Planning and Research and the California Resources Agency to develop CEQA Guidelines on how local agencies should analyze and, if necessary, mitigate for GHG emissions.

Construction emissions would be associated with vehicle engine exhaust from construction equipment and vehicles, vendor trips, and construction worker commuting trips. Construction-related GHG emissions are considered temporary and short term. As shown in Table 15, Construction Emissions, short-term construction CO_{2e} emissions will not exceed the annual GHG threshold.

Table 15. Estimated Annual Construction Greenhouse Gas Emissions

Construction Year	CO ₂	CH ₄	N ₂ O	CO _{2e}
	Metric Tons per Year			
2022	4280.74	0.85	0.00	4301.95
2023	143.38	0.006	0.00	143.53
Total GHG Emissions	4,424.12	0.86	0.00	4,445.48
<i>Total Construction GHG (CO_{2e}) Amortized Emissions over 30 Years</i>				148

Operational Emissions

Less Than Significant Impact. Operation of the Project would generate GHG emissions through motor vehicle trips to and from the Project site, energy use (natural gas or electricity), potential use of the emergency generator, and potential leakage from gas-insulated circuit breakers (area source). The CalEEMod was used to calculate the annual GHG emissions based on the operational assumptions described in Section 2.4.2.2. Additionally, GHG emissions associated with SF₆-insulated circuit breakers at the on-site substation were calculated based on up to 320 pounds of SF₆ contained in equipment, an annual leak rate of 0.5%, and a GWP of 22,800.

The estimated operational GHG emissions from area sources, energy usage, motor vehicles, and emergency generator are shown in Table 16.

Table 16. Estimated Annual Operational Greenhouse Gas Emissions

Annual	CO ₂	CH ₄	N ₂ O	SF ₆	CO _{2e}
	Metric Tons per Year				
Total Operational GHG Emissions	41.68	0.11	0.0009	0.000726	61.22
<i>Total Operational GHG Emissions + Amortized Construction GHG Emissions</i>					209

As shown in Table 16, estimated annual Project-generated GHG emissions would be approximately 45 MT CO_{2e} per year as a result of Project operation. Estimated maximum annual operational emissions and amortized construction emissions would be approximately 202 MT CO_{2e} per year. As shown, the total annual emissions would not exceed the GHG significance threshold of 900 MT CO_{2e} per year. Because

the Project's GHG emissions would not result in a cumulatively considerable contribution, the Project would result in a less than significant cumulative impact in terms of climate change.

3.4.2 Would the project conflict with an applicable plan, policy, or regulations adopted for the purpose of reducing the emissions of greenhouse gases?

No Impact.

The Project would keep with renewable energy targets under the Scoping Plan, SB X1-2, and SB 350 by providing a source of renewable energy to achieve the RPS of 33% by the end of 2020 and 50% by the end of 2030. While GHG would be generated from construction and occasional operation and maintenance activities, the Project would result in a net reduction in GHG from the production of solar energy that would potentially replace energy generated by fossil fuels. The Project would assist in the attainment of the state's goals by using a renewable source of energy that could displace electricity generated by fossil-fuel-fired power plants, and therefore would comply with the goals and objectives of the state.

Under the SJVAPCD's CEQA thresholds for GHG, a project would not have a significant GHG impact if it is consistent with an applicable plan to reduce GHG emissions, and a CEQA-compliant analysis was completed for the GHG reduction plan. The GHG emission goals in the FCOG RTP/SCS are based on demographic data trends and projections that include household, employment, and total population statistics. The Project is anticipated to have up to four full-time equivalent personnel consisting of plant operators and maintenance technicians starting in 2023. The additional jobs estimated by the Project would be well within the annual growth projection for the FCOG 2014 RTP/SCS. Therefore, the Project would be consistent with the FCOG 2014 RTP/SCS and would not conflict with an applicable plan and the Project would have a less than significant impact.

Appendix A. Detailed CalEEMod Output

Luna Valley Solar Project - Fresno County, Annual

**Luna Valley Solar Project
Fresno County, Annual**

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Industrial	1,300.00	User Defined Unit	1,300.00	0.00	0

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	45
Climate Zone	3			Operational Year	2023
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Luna Valley Solar Project - Fresno County, Annual

Project Characteristics - Project is located in Fresno County.

Land Use - Project would be on 1300 acres of privately owned agricultural land

Off-road Equipment - Construction equipment data provided by applicant.

Off-road Equipment - Construction equipment data provided by applicant.

Off-road Equipment - Construction equipment data provided by applicant.

Trips and VMT - Peak per phase; provided by applicant.

Grading - Acres of grading.

Architectural Coating - O&M Building 100 x 50 ft, Control Building 40 x 40 ft

Vehicle Trips - 4 full-time personnel.

Area Coating - O&M Building 100 x 50 ft, Control Building 40 x 40 ft

Energy Use - Energy rates based on Unrefrigerated Warehouse, Lighting rates based on Parking Lot.

Water And Wastewater - Estimated (conservative) water use for building facilities and occasional solar panel cleaning.

Solid Waste - Solid waste rates based on Unrefrigerated Warehouse.

Construction Off-road Equipment Mitigation - BMPs for fugitive dust control

Tier 4 Final Engines for equipment >100 hp

Mobile Commute Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps - 1 diesel emergency generator 49 kW or less located at substation; assume no more than 50 hours/year for maintenance, testing, and emergency response.

Luna Valley Solar Project - Fresno County, Annual

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Month 1-2	Grading	1/3/2022	2/26/2022	5	40	Stage 1: Mobilization, site prep, fencing, laydown, trenching
2	Month 3	Grading	2/27/2022	4/2/2022	5	25	Stage 1: Mobilization, site prep, fencing, laydown, trenching
3	Month 4-7	Grading	4/3/2022	7/30/2022	5	85	Stage 1 + Stage 2: Cable install, trench backfill, pile and racking install, inverter install, module install, bess install
4	Month 8-9	Trenching	7/31/2022	10/1/2022	5	45	Stage 1 + Stage 2: Cable install, trench backfill, pile and racking install, inverter install, module install, bess install
5	Month 10	Trenching	10/2/2022	10/29/2022	5	20	Stage 2 + Stage 3: Inverter, pile racking, module, bess install, commissioning/testing
6	Month 11	Trenching	10/30/2022	12/3/2022	5	25	Stage 2 + Stage 3: Inverter, pile racking, module, bess install, commissioning/testing
7	Month 12	Trenching	12/4/2022	12/31/2022	5	20	Stage 2 + Stage 3: Inverter, pile racking, module, bess install, commissioning/testing
8	Month 13-14	Trenching	1/1/2023	2/25/2023	5	40	Stage 3: Inverter, pile racking, module, bess install, commissioning/testing
9	Month 15-16	Architectural Coating	2/26/2023	4/28/2023	5	45	Stage 3: Inverter, pile racking, module, bess install, commissioning/testing

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 0

Acres of Paving: 0

Residential Indoor: 0; Residential Outdoor: 0; Non-Residential Indoor: 9,900; Non-Residential Outdoor: 3,300; Striped Parking Area: 0 (Architectural Coating – sqft)

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Replace Ground Cover

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

Clean Paved Roads

Luna Valley Solar Project - Fresno County, Annual

3.2 Month 1-2 - 2022

Unmitigated Construction On-Site

Luna Valley Solar Project
Fresno County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Industrial	1,300.00	User Defined Unit	1,300.00	0.00	0

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	45
Climate Zone	3			Operational Year	2023
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Luna Valley Solar Project - Fresno County, Summer

Project Characteristics - Project is located in Fresno County.

Land Use - Project would be on 1300 acres of privately owned agricultural land

Off-road Equipment - Construction equipment data provided by applicant.

Off-road Equipment - Construction equipment data provided by applicant.

Off-road Equipment - Construction equipment data provided by applicant.

Trips and VMT - Peak per phase; provided by applicant.

Grading - Acres of grading.

Architectural Coating - O&M Building 100 x 50 ft, Control Building 40 x 40 ft

Vehicle Trips - 4 full-time personnel.

Area Coating - O&M Building 100 x 50 ft, Control Building 40 x 40 ft

Energy Use - Energy rates based on Unrefrigerated Warehouse, Lighting rates based on Parking Lot.

Water And Wastewater - Estimated (conservative) water use for building facilities and occasional solar panel cleaning.

Solid Waste - Solid waste rates based on Unrefrigerated Warehouse.

Construction Off-road Equipment Mitigation - BMPs for fugitive dust control

Tier 4 Final Engines for equipment >100 hp

Mobile Commute Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps - 1 diesel emergency generator 49 kW or less located at substation; assume no more than 50 hours/year for maintenance, testing, and emergency response.

3.0 Construction Detail

Construction Phase

Luna Valley Solar Project - Fresno County, Summer

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Month 1-2	Grading	1/3/2022	2/26/2022	5	40	Stage 1: Mobilization, site prep, fencing, laydown, trenching
2	Month 3	Grading	2/27/2022	4/2/2022	5	25	Stage 1: Mobilization, site prep, fencing, laydown, trenching
3	Month 4-7	Grading	4/3/2022	7/30/2022	5	85	Stage 1 + Stage 2: Cable install, trench backfill, pile and racking install, inverter install, module install, bess install
4	Month 8-9	Trenching	7/31/2022	10/1/2022	5	45	Stage 1 + Stage 2: Cable install, trench backfill, pile and racking install, inverter install, module install, bess install
5	Month 10	Trenching	10/2/2022	10/29/2022	5	20	Stage 2 + Stage 3: Inverter, pile racking, module, bess install, commissioning/testing
6	Month 11	Trenching	10/30/2022	12/3/2022	5	25	Stage 2 + Stage 3: Inverter, pile racking, module, bess install, commissioning/testing
7	Month 12	Trenching	12/4/2022	12/31/2022	5	20	Stage 2 + Stage 3: Inverter, pile racking, module, bess install, commissioning/testing
8	Month 13-14	Trenching	1/1/2023	2/25/2023	5	40	Stage 3: Inverter, pile racking, module, bess install, commissioning/testing
9	Month 15-16	Architectural Coating	2/26/2023	4/28/2023	5	45	Stage 3: Inverter, pile racking, module, bess install, commissioning/testing

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 0

Acres of Paving: 0

Residential Indoor: 0; Residential Outdoor: 0; Non-Residential Indoor: 9,900; Non-Residential Outdoor: 3,300; Striped Parking Area: 0 (Architectural Coating – sqft)

Luna Valley Solar Project - Fresno County, Winter

Luna Valley Solar Project
Fresno County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
User Defined Industrial	1,300.00	User Defined Unit	1,300.00	0.00	0

1.2 Other Project Characteristics

Urbanization	Rural	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	45
Climate Zone	3			Operational Year	2023
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Luna Valley Solar Project - Fresno County, Winter

Project Characteristics - Project is located in Fresno County.

Land Use - Project would be on 1300 acres of privately owned agricultural land

Off-road Equipment - Construction equipment data provided by applicant.

Off-road Equipment - Construction equipment data provided by applicant.

Off-road Equipment - Construction equipment data provided by applicant.

Trips and VMT - Peak per phase; provided by applicant.

Grading - Acres of grading.

Architectural Coating - O&M Building 100 x 50 ft, Control Building 40 x 40 ft

Vehicle Trips - 4 full-time personnel.

Area Coating - O&M Building 100 x 50 ft, Control Building 40 x 40 ft

Energy Use - Energy rates based on Unrefrigerated Warehouse, Lighting rates based on Parking Lot.

Water And Wastewater - Estimated (conservative) water use for building facilities and occasional solar panel cleaning.

Solid Waste - Solid waste rates based on Unrefrigerated Warehouse.

Construction Off-road Equipment Mitigation - BMPs for fugitive dust control

Tier 4 Final Engines for equipment >100 hp

Mobile Commute Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps - 1 diesel emergency generator 49 kW or less located at substation; assume no more than 50 hours/year for maintenance, testing, and emergency response.

```

*** MODELOPTs: RegDEFAULT CONC ELEV RURAL ADJ_U*

*** MODEL SETUP OPTIONS SUMMARY ***

**Model Is Setup For Calculation of Average CONCentration Values.

```

-- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**Model Uses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F
**Model Uses RURAL Dispersion Only.

```

```

**Model Uses Regulatory DEFAULT Options:
  1. Stack-tip Downwash.
  2. Model Accounts for ELEVated Terrain Effects.
  3. Use Calms Processing Routine.
  4. Use Missing Data Processing Routine.
  5. No Exponential Decay.

**Other Options Specified:
  ADJ_U* - Use ADJ_U* option for SBL in AERMET
  CCVR_Sub - Meteorological data includes CCVR substitutions
  TEMP_Sub - Meteorological data includes TEMP substitutions

**Model Assumes No FLAGPOLE Receptor Heights.

**The User Specified a Pollutant Type of: OTHER

**Model Calculates 4 Short Term Average(s) of: 1-HR 3-HR 8-HR 24-HR
and Calculates PERIOD Averages

**This Run Includes: 1 Source(s); 1 Source Group(s); and 9686 Receptor(s)

with: 0 POINT(s), including
      0 POINTCAP(s) and 0 POINTHOR(s)
and: 0 VOLUME source(s)
and: 1 AREA type source(s)
and: 0 LINE source(s)
and: 0 RLIN/RLINEXT source(s)
and: 0 OPENPIT source(s)
and: 0 BUOYANT LINE source(s) with 0 line(s)

**Model Set To Continue RUNNING After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

**Output Options Selected:
  Model Outputs Tables of PERIOD Averages by Receptor
  Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
  Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
  Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values:
  c for Calm Hours
  m for Missing Hours
  b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 72.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
  Emission Units = GRAMS/SEC ; Emission Rate Unit Factor = 0.10000E+07
  Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 5.2 MB of RAM.

**Input Runstream File: aermod.inp
**Output Print File: aermod.out

**Detailed Error/Message File: LVS_UNIT_ST_0700-1600.ERR
**File for Summary of Results: LVS_SUMMARY_ST_0700-1600.SUM
