SPECIAL PROVISIONS

Section 8-1.04C(2) Second Order of Work

ADD:

Work to be performed along Sierra St including truncated domes within Union Pacific Railroad's Right-of-Way shall be performed as a last item of work and as approved by the Engineer

Section 15-1 Existing Facilities

DELETE:

Utility	Contact Information	Location	Duration
AT&T Kevin Tate	(559) 454-3725 Kt5861@att.com	Adjust Manholes to Grade	2 Day Notification

REPLACE with:

Utility	Contact Information	Location	Duration
AT&T Kevin Tate	(559) 454-3725 Kt5861@att.com	Adjust Manholes to Grade	10 Day Notification

Section 39-3.04A General

DELETE:

Schedule cold planing activities such that the pavement is cold planed, the HMA is placed, and the area is opened to traffic during the same work shift.

REPLACE with:

Schedule cold planing activities such that the pavement is cold planed, the HMA is placed, and the area is opened to traffic within five (5) working days.

If any pavement section that has been cold planed deteriorates/fails as a result of traffic driving on it, the Contractor at their sole cost is responsible for replacing/fixing the pavement section as determined by the Engineer

Section 39-3.06A(1) Submittals

ADD:

Multi-unit or single unit recycling machines can be used. Use equipment that:

1. Cold planes, pulverizes, crushes, and sizes the existing asphalt pavement.
2. Mixes the in-place recycled pavement material with the recycling agent and cement into a homogenous mixture.
3. Places the CIR mixture to the lines, grades, and specification.

Pulverizing, crushing, or sizing equipment must produce uniform material to the specified size before mixing the in-place recycling pavement material with the recycling agent.

Section 39-3.06C(5) Milling, Sizing and Mixing

ADD:

A single-unit self-propelled cold recycling machine with a down cutting cutter head shall be capable of pulverizing and recycling the existing hot-mix asphalt pavement to the depths shown on the plans, incorporate the foamed asphalt and compaction water, and mix the materials to produce a homogeneous material.

The milling and mixing unit must be equipped with a gradation control bar that will stabilize the milled surface during milling to prevent the pavement from chunking. The minimum power of this machine shall be 950 hp. The machine shall be capable of pulverizing and recycling not less than 12 feet 6 inches wide in each pass.

The CIR machine must rear load directly into the paver's receiving hopper or the paver's loading equipment must pick up the CIR mixture and deposit it in the paving machine

without waste. If the paving screed is directly attached to the CIR equipment, feed the CIR mixture directly to the paving screed.
