

FRESNO COUNTY DEPARTMENT OF BEHAVIORAL HEALTH - OUTCOMES

PROGRAM TITLE: Integrated Mental Health Services at Community Primary Care Clinics

PROVIDER: United Health Centers of the San Joaquin Valley (UHC)

PROGRAM DESCRIPTION: The intent of this project is to provide mental health prevention and early intervention services in primary care settings as part of an effort to integrate mental health and physical health care services at community primary care clinics. Mental health services will be provided at health centers to people who are starting to get overwhelmed with everyday stressors and go to their primary care physician with their symptoms (anxiety, depression, sleep deprivation, etc.). Co-location of primary care and mental health services fosters effective use of expertise in overlapping fields of knowledge and practice.

The specific activities to be delivered include screening, assessment, and short-term therapeutic treatment for individuals who are early in the manifestation of a mental health concern or disorder, as well as referrals to appropriate community resources and services as needed.

AGES SERVED:

Children
 Adult

TAY
 Older Adult

DATES OF OPERATION: 1/1/12 – Current

DATES OF DATA REPORTING PERIOD: Jan-Dec 2012

OUTCOME GOALS:

Ensure individuals shall be seen for an initial appointment within a maximum of 10 working days of initial request for service.

Appropriate and early identification of mental health issues in underserved cultural and linguistic populations who frequently use health centers.

OUTCOME DATA:

Of the 481 individuals served from January thru December, 100% have been seen by the primary care clinics' mental health teams within 10 working days of the initial request for mental health prevention and early intervention (PEI) services.

157 PHQ-9 screenings were administered during the reporting period of the 481 individuals served from January thru December 2012 (33%). Initial baseline scores on PHQ-9 screenings and LOCUS have been established for individuals that have received mental health PEI services since program inception and will be evaluated against individuals' scores after they have been engaged with mental health PEI services for an extended period (beyond

6 months). UHC has also joined a project with the California Health Collaborative to administer self-assessments and screenings to pregnant and post-partum patients. Baseline results will be monitored over the next year. The goal over the next year is that at a minimum 50% of all chronic care medical patients (diabetic, hypertensive, COPD, etc.) will receive a PHQ-2 screening and all pregnant women each trimester and post-partum patients will receive a PHQ-2 screening. Patients will be given a full PHQ-9 should it be indicated.

Linkages to appropriate mental health prevention and early intervention activities offered at the CONTRACTOR(S)' health centers and throughout the underserved communities.

Clients are linked to appropriate mental health prevention and early intervention services offered at the clinic. A Health and Lifestyle Assessment Tool is in development and will be administered on an annual basis along with ongoing monitoring of the percentage of patients seen for medical/primary care services that are referred to the primary care clinics' behavioral health program and seen for mental health PEI services.

Linkages to appropriate long term mental health services outside the scope of mental health prevention and early intervention.

15 individuals in need of help outside the scope of mental health PEI services based on client's condition have been linked with County Mental Health providers or other community-based mental health providers.
