MEMORANDUM

TO: California Certified EMTs and CCEMSA Approved EMT Training Programs and Continuing Education Providers

FROM: Dale Dotson, EMS Coordinator

DATE: May 14, 2019

SUBJECT: New Mandatory Training Requirements for EMT Certificate Renewal (Naloxone, Epinephrine, and Glucometers)

On July 1, 2017, the California Emergency Medical Services Authority published revisions to the EMT certification and renewal regulations. The changes mandate new EMT training for naloxone, epinephrine, and glucometers before EMTs may renew their certification. These regulations are effective July 1, 2019.

What this means for EMTs:

- EMTs that are renewing after June 30, 2019, will need to complete the required training before they may renew their EMT certificate.
- EMTs will need to be trained by an approved California EMT or paramedic training program or continuing education provider in all three skills.
- EMTs will need to obtain a continuing education certificate or training certificate from the approved training program or continuing education provider for all three skills and submit that certificate and the EMSA skills competency verification form to the Agency when renewing their EMT certification.

What this means for training institutions or continuing education providers:

- CCEMSA approved training programs and continuing education providers must develop training curriculum for the administration of naloxone, epinephrine, and the use of glucometers by EMTs. The curriculum must meet the requirements of Title 22 of the California Code of Regulations.
- CCEMSA approved training programs and continuing education providers must provide the EMT with a training or continuing education certificate that clearly indicates that the EMT has received the mandatory training.

Any questions concerning this memorandum should be directed to Dale Dotson, EMS Coordinator at ddotson@fresnoca.gov or by telephone at (559) 600-3387.
