

FRESNO/KINGS/MADERA EMS PERSONNEL
SCOPE OF PRACTICE DURING INTERFACILITY TRANSPORTS

	EMT-I	EMT-P																											
1. Perform basic life support including assessment, CPR, bandaging, splinting, and the use of basic airway maneuvers and adjuncts (OPA, NPA, and tracheostomy/stoma care).	X	X																											
2. Administration of oxygen.	X	X																											
3. Administration of oral glucose.	X	X																											
4. Monitor a stable patient with an in-place nasogastric tube, gastrostomy tube, foley catheter or saline lock.	X	X																											
5. Monitor a stable patient with a peripheral IV line of glucose or isotonic balanced salt solution (including ringer's lactate) if the IV solution does not contain medications or additives.	X	X																											
UNDER THE DIRECTION OF AN EMS BASE HOSPITAL ,THE EMT-P MAY PERFORM THE FOLLOWING:																													
6. Monitor a patient with a central venous and arterial IV line.		X																											
7. Monitor a patient with a chest tube.		X																											
8. Monitoring IV solutions containing potassium (not greater than 20mEq/L).		X																											
9. Ventilate a patient via endotracheal tube (inserted at transferring facility).		X																											
10. Cardiac monitoring and defibrillation.		X																											
11. Synchronized cardioversion.		X																											
12. Insertion and ventilation via combitube.		X																											
13. Administration of the following medications (including peripheral IV insertion):		X																											
<table style="width: 100%; border: none;"> <tr> <td style="width: 33%;">a. Activated Charcoal</td> <td style="width: 33%;">i. Dopamine Hydrochloride</td> <td style="width: 33%;">r.
