

At-A-Glance:

A Summary of TB in Fresno County (2020)

Figure 1. Fresno County TB Incident Cases by Race/Ethnicity (2020). The majority of new TB cases self-identify as Hispanic. Categories representing <5% of total new cases are not represented.

Figure 2. Fresno County TB Incident Cases by Age (2020). TB cases in those less than 55 years of age represent over 50% of all new TB cases occurring in Fresno County.

Figure 3. Fresno County's TB Trends by Year. This figure shows the number of new TB cases and incidence by year. Fresno County had 36 active TB cases in the year 2020, down from 38 in 2019.

¹ Incidence is calculated per 100,000 persons.

Figure 5. Percent of Fresno County TB Cases that are Foreign vs. US Born. This figure shows the percentage of TB cases that are foreign vs. US born from 2015–2020. Most TB cases from 2015–2020 occurred in people who are foreign born.

Figure 4. Fresno County TB Incidence by Race & Ethnicity² (2020). Asians/Pacific Islanders had the highest incidence of TB in 2020 followed by Hispanics, Blacks and Whites respectively.

¹ Incidence is calculated per 100,000 persons

² Hispanic may include people from any race (i.e. American Indian/Alaskan Native, Asian/Pacific Islander, Black, White, and Multi-Racial). All other race groups are non-Hispanic.

Figure 6. Fresno County's Incident Cases of TB by Gender and Year.

This figure shows the number of new cases, by year and gender, as well as the corresponding incidence. Excluding the year 2019, from 2015 to 2020, males had both a higher incidence of TB and a higher number of TB cases when compared to females.

¹ Incidence is calculated per 100,000 persons of that gender.
