

## TDM Success Story

This story is about a 29 year old Hispanic woman with 4 children. A TDM meeting determined that mom was in need of services to help her become stable with mental health services so that she could keep her children in her own care.

A clinician began working with the mother directly as a result of the contact made via TDM. This clinician meets with the mother and two of her children on an ongoing basis each week.

The mother is now stable on medication and is working hard to provide a decent home environment for her children. She was also connected to a social worker who helped her to obtain a visa in this country due to her history of domestic violence. This mother would probably not have come so far without early intervention from our department.
